Key indicators

Single-crystal X-ray study T = 173 K Mean σ (C–C) = 0.002 Å R factor = 0.030 wR factor = 0.078 Data-to-parameter ratio = 13.9

For details of how these key indicators were automatically derived from the article, see http://journals.iucr.org/e. 1-(2,4-Dichloro-5-fluorophenyl)-3-(3,4-dimethoxyphenyl)prop-2-en-1-one

In the title biologically active compound, $C_{17}H_{13}Cl_2FO_3$, the central C=C double bond is *trans* configured. The molecule consists of two essentially planar parts which are twisted by 67.06 (2)° with respect to each other.

Received 17 July 2006 Accepted 17 July 2006

Comment

Among various organic compounds reported for their nonlinear optical (NLO) properties, chalcone derivatives are notable for their excellent blue-light transmittance and good crystallizability (Uchida et al., 1998). They provide a necessary molecular electronic configuration to show NLO effects, with two aromatic rings connected through a conjugated bridge (Goto et al., 1991; Tam et al., 1989; Indira et al., 2002). Substitution on either of the benzene rings appears to increase the likelihood of noncentrosymmetric crystal packing, as well as enhancing the electronic properties of the molecule (Fichou et al., 1988). The crystal structures of 3-(3,4-dimethoxyphenyl)-1-(4-fluorophenyl)prop-2-en-1-one (Butcher et al., 2006), 4'-fluorochalcone (Ng et al., 2006), 1-(2,4-dichlorophenyl)-3-(3,4-dimethoxyphenyl)prop-2-en-1-one (Patil et al., 2006) and 1-(4-fluorophenyl)-3-(4-methoxyphenyl)prop-2-en-1-one (Harrison et al., 2006) have been reported. Recently, fluorinated organic compounds have attracted attention due to the ability of fluorine to act as a polar hydrogen or hydroxyl mimic. Therefore, substitution of hydrogen by fluorine has been a strategy in designing molecules for biological activity studies (Holla et al., 2004). Crystal structures of fluorinated chalcones are relatively rare in the literature. In this context, the present work reports the crystal structure of the title compound, (I).

The molecular structure of (I) is shown in Fig. 1. Bond lengths and angles can be regarded as normal (Cambridge Crystallographic Database, Version 5.27, November 2005 updated May 2006; *MOGUL* Version 1.1; Allen, 2002). The central C=C double bond is *trans* configured. The molecule

© 2006 International Union of Crystallography All rights reserved consists of two planar segments which are twisted by $67.06 (2)^{\circ}$ with respect to each other. One of these is the 3,4-(dimethoxy)benzene group, which is coplanar with the propenone group (r.m.s. deviation for all non H atoms = 0.046 Å), while the other is the halogenated phenyl ring. All torsion angles are close to 0 and 180°; only those about the C1–C11 bond differ significantly from planarity (Table 1).

The crystal packing reveals two weak $C-H\cdots O$ contacts (Table 2).

Experimental

The title compound was synthesized according to the method reported in the literature by Furniss *et al.* (1989), in a yield of 75%. The compound was purified by recrystallization from ethanol. Crystal growth was carried out in acetone solvent by the slow evaporation technique (m.p. 386-388 K). Analysis for (I): found (calculated) C 57.40 (57.49%), H 3.67 (3.69%).

Symmetry code: (i) -x + 1, -y + 1, -z + 1.

Figure 1

The molecular structure of (I), with the atom-numbering scheme. Displacement ellipsoids are drawn at the 50% probability level.

H atoms were found in a difference map, but were placed geometrically and allowed to ride on their parent C atoms at distances of 0.95 and 0.98 Å for aromatic and methyl groups, respectively, and with $U_{\rm iso}({\rm H}) = 1.2 U_{\rm eq}({\rm C})$ or $1.5 U_{\rm eq}({\rm C}_{\rm methyl})$. The methyl groups were allowed to rotate but not to tip.

Data collection: X-AREA (Stoe & Cie, 2001); cell refinement: X-AREA; data reduction: X-AREA; program(s) used to solve structure: SHELXS97 (Sheldrick, 1997); program(s) used to refine structure: SHELXL97 (Sheldrick, 1997); molecular graphics: PLATON (Spek, 2003); software used to prepare material for publication: SHELXL97 and PLATON.
