Correction to
"A family of maximal subgroups containing the Sylow subgroups and some solvability conditions"

By

PRABIR BHATTACHARYA and N. P. MUKHERJEE

In [1], we would like to make the following correction. In the statements of all the results described in Section 1, the hypothesis that "p is any prime" should be changed to "p is the largest prime dividing the order of the group G". Then, the proofs of all the results hold good.
