A First Course in Abstract Algebra

Joseph J. Rotman

University of Illinois

at Urbana-Champaign

PRENTICE HALL, Upper Saddle River, New Jersey 07458

CONTENTS

Preface ix

Chapter 1 Number Theory 1

Induction 1
Binomial Coefficients 8
Greatest Common Divisors 19
The Fundamental Theorem of Arithmetic 31
Congruences 35
Dates and Days 43

Chapter 2 Groups 50

Functions 50
Permutations 58
Groups 67
Lagrange's Theorem 77
Geometry 83
Homomorphisms 98
Quotient Groups 108
Counting with Groups 117
Groups of Small Order 130

Chapter 3 Commutative Rings 141

Elementary Properties 141
Fields 150

Polynomials 157
Greatest Common Divisors 162
Factorization 172
Homomorphisms 178
Irreducibility 182
Quotient Rings and Finite Fields 189
Officers, Fertilizer, and a Line at Infinity 199

Chapter 4 Goodies 208

Vector Spaces 208
Euclidean Constructions 223
Classical Formulas 233
Insolvability of the General Quintic 245

Bibliography 258

Index 259
