Queensborough Community College

ABSTRACT

The academic records of over 2,000 students who were required as a result of their national percentile scores on the Ccoperative English Examination to take a remediation course in reading and writing skills during their first semester at Queensborough Community College (New York) were compared to the academic records achieved by an equal number of students who were not required to take a remediation course. The basis of comparison used was the grades received by both groups of students in various introductory academic courses taken one semester after the remedial students had taken their required reading and/or writing course. The same survey was conducted the following year with the new class of incoming freshmen. In both years of the study, the academic performance of the former remedial students with regard to the percentage of passing grades they received was very comparable to the percentage of passing grades received by the non-remedial students. The implications may be useful for evaluating programs given to ~ underprepared students in two-year colleges. Extensive tabular data are appended. (Author/JDS).

A Follow-up Study:

How Do Basic Skills Students (those required to take Remedial Reading and/or Writing courses) Compare With Mon-Basic Skills Students In Some of Their Subsequent College Courses?

Prepared by

· Irwin Bergm**a**n and

Robert Gerace

Dept. of Basic Educational Skills

The academic record of over 2,000 students who were required to take a remediation course in reading and/or writing skills during their first semester at Queensborough Community College as a result of their national percentile scores on the Cooperative English Examination was compared with the agademic record achieved by students who were not required to take e remediation course. The basis of comparison used was the grades received by both groups of students in various introductory academic courses taken one semester after the remedial students had taken their required reading and/or writing course. The same survey was conducted the following year with the new class of incoming freshmen. In both years of the study, the academic performance of the former remedial students with regard to the percentage of passing grades they received was very comparable to the percentage of passing grades received by the non-remedial students. The implications may be useful for evaluating programs given to underprepared students in the two year colleges.

A Follow-up Study: How Do Basic Skills Students (Those Required to Take Remedial Reading and/or Writing Courses) Compare with Non-Basic Skills Students in Some of Their Subsequent College Courses?

The Basic Skills Program at Queensborough Community College

Queensborough Community College is one of the two-year colleges of the City University of New York. In the late 1960's a Department of Basic Educational Skills was established at the College. The purpose of the department is to provide remediation in reading and/or writing skills for entering freshmen who appear to be in need of such assistance.

test to determine which entering students shall be required to enroll in remedial courses in reading and/or writing. Students scoring below specific percentiles, using national norms of the test, must register for the appropriate remedial course. The specific percentile criteria were arrived at after a careful study of various factors. In addition to educational need, administrative and practical matters such as size of the entering freshmen class, amount of classroom space available for remedial courses, the number of instructors allocated to teach remedial students, and student class size in remedial courses had to be taken into consideration.

Entering freshmen at Queensborough who score below the 33rd percentile in "Total Reading", which involves vocabulary and comprehension factors, on the Cooperative English Examination, are required to register for the college reading and study skills improvement course. The college catalogue describes this course as a "workshop in college reading improvement to help develop reading skills and effective use of time in required college

reading. Emphasis on organizing ideas, increasing speed, improving comprehension and interpretation, developing vocabulary, and reading to remember facts." Formal and informal diagnostic procedures are used by each teacher at the beginning of every semester to determine the specific instructional needs and most appropriate materials for his or her students. Among the specific reading and study skills areas usually dealt with are: vocabulary building, identifying main ideas and related details, identifying patterns of organization in a variety of reading selections, note taking from lectures and from textbooks, skimming and scanning, critical reading, and test-taking techniques. Reading and study skills classes meet twice a week for a total of three class hours. In addition, students are required to spend one hour a week, to be arranged on their own time, in the college reading lab. The lab houses a wide variety of software and hardware materials to assist students in developing their reading and study skills. Among the materials in the reading lab are EDL Controlled Readers (to increase reading speed), various comprehension kits, vocabulary books, tapes to develop word pronunciation and note taking skills, and a lending library of paperback books. Classroom instructors prescribe lab work for individual students. Trained aides are present to provide additional assistance and guidance, when needed,

percentile on the "English Expression" portion of the Cooperative English Expression portion of the Cooperative English Examination are required to register for the college composition workshop course. The catalogue describes this course as one intended "for students with special writing proclems who need intensified instruction, as determined by a standard placement examination and screening results. Paragraph and essay composition and preparation of reports stressed, with emphasis on organization,

thought development, and grammar. As in the reading and study skills course, each teacher attempts to determine the specific instructional needs and most appropriate naterials for his or herstudents. Among the specifics of grammar and mechanics usually dealt with in the writing course are: sentence completeness, verb tense, subject- verb - pronoun agreement, clear pronoun reference, correct punctuation and capitalization, sentence coordination, subordination, correct spelling, and vocabulary building. Considerable attention is also given to the expository form of writing, such as the type that is required for completing research papers and answering essay questions on examinations. Composition workshop course sections meet twice a week for a total of three class hours. In addition, one hour a week for each writing class is scheduled for individual student-teacher conferences, Typically, during a semester each student will confer individually with the student anywhere from three to six times concerning the written work done by the student in the composition workshop course. A "writing lab" is also available for student use. The lab is supervised by designated course instructors who are assisted by trained aides. Written work of the students is reviewed and discussed on a one-to-one basis. Attendance in the writing lab is not required, but is strongly recommended for students in these instances where it is felt that this additional work would be particularly advantageous. Some students voluntarily report to the vriting lab one hour a week on a regular basis.

Methods and materials used in the reading adm study skills and in the composition workshop classrooms conducted by the Basic . Tkills Department at Queensborough are quite diverse, and, as might be expected, vary to some extent from instructor to instructor.

In addition to the traditional classroom lectures and class discussions, among the methods that have been used are: role - playing (to stimulate students in writing about a particular topic), oral reading and discussion of individual student reports, team teaching, and occasional class sessions in the college library (where the instructors can teach and supervise students use of research materials). In addition to textbooks, among the materials which have been used in the classroom to maximize learning effectiveness include: overhead transparencies, slides, speed reading machines, and tapes (for practice with note-taking skills).

An attempt is made to limit remedial class size to 15 or 20 students. Due to fiscal problems at the City University of New York, however, this has not always been possible.

One of the main objectives of the Basic Skills Dept.'s reading and writing improvement courses at Queensborough is to effectuate reading and writing improvement to the point where students are able to transfer their improved abilities in these areas to subject matter courses offered at the College. Some departments at the college permit students to take the introductory courses of the department as corequisites with the reading and writing improvement courses. Other departments require the reading and writing courses be successfully completed as prerequisites before they permit students to enroll in any of their introductory courses.

Basic Skills Dept. Follow-up Study

The following study was made in an attempt to determine whether the reading and writing improvement courses offered by the Basic Skills Dept. at Queensborough Community College might in some way be playing an effective role in assisting remedial students to deal with their various subject matter courses at the College. In more

specific terms, the study was set up to determine the academic performance of these remedial students in various introductory academic courses for which they enrolled the semester after they had taken the remedial reeding and/or writing courses. A comparison was than made with the academic performance in the same semester of non-remedial students from this entering freshman class.

In order to check on the reliability of the data which was collected, the same procedure was used the following year with the academic records of remedial and non-remedial students from that incoming freshman class. The records of more than 4,000 students were fearched in each year of the study.

Results:

In most of the introductory courses during the two years of the study, a higher percentage of A and B grades was achieved by the non-basic skills students than was the percentage of the A and B grades received by the former basic skills students (7.9% and 29.7% as opposed to 2.9% and 18.1%). From the first to the second year of the study, the number of C's received by basic skills students, increased by 3.9%.

The total percentage of passing grades for former basic skills students showed an increase from 64.6% to 68.5%, also a rise of 3.9%. Correspondingly, in what may be an additional promising development, the total percentage of F's for former basic skills students decreased from 15.5% to 10.4%, a drop of 5.1%.

To carry the breakdown of results further, courses that traditionally require greater reading and/or writing requirements may be usefully focused upon. These may include English, History, and Social Science. In English, the percent of passing among

÷.6

former basic kills students rose from 71:0% to 72.8%, an improvement of 1.8%; in History, the increase was more dramatic, from 55.4% to 62.3%, a rice of 6.9%; in Social Science, a slighter improvement was recorded, from 65.5% to 66.7%, an increase of 1.2%. While the number may not be overwhelmingly large for each of these areas, it is encouraging that improvement did take place.

Conclusions:

A perusal of the summary statistics at the back of this report appear to reveal a definite general pattern with regard to both former basic skills students and non-basic skills students at Queensborough Community College. In both cases, the percentage of passing grades continue to rise. It can only be conjectured at the present time as to what factors or combination of factors we might attribute this pattern:

The possibility exists that this increase in the percentage of passing grades might be due, at least in past, to the Basic Skills. Department's remediation efforts in the area of reading, writing, and study skills: Some other possibilities or combinations of possibilities that might help to explain the percentages of passing grades for queensborough students are: changing faculty grading standards, a change in the make-up of the student population: at queensborough, changing student attitudes toward their work, or some other factors which we have not yet been able to identify. This whole area might prove to be very fertile ground for further investigation and research.

The present study also indicates a similar trend in W or INC ("withdrawal" or "incomplete") grades being received by both former basic skills students and by non-basic skills students in various introductory courses throughout the college, with

a slight increase for former basic skills students.

Our general conclusion for this report is that former basic skills students appear to be entering and continuing to become an integral part of the mainstream of academic life of .Queensborough Community College.

The department by department results, along with final cummaries of the data, are compiled in the remaining pages of this study.

(In the charts which follow, a few letter symbols and abbreviations have been used: W = official student withdrawal
for a course without academic penalty; INC = "incomplete" grade
given to a student who has been passing the course and who has
been granted-additional time by his or her instructor to
complete a semester project or report; the letters A,B,C,D,F,
represent the traditional letter grades received by students
in their courses; and the abbreviation "Sp" and "Spg." represent
spring remester.)
