Contents

Introduction	vii
Part 1. Elliptic Problems	
Chapter 1. An Introductory Problem	3
§1.1. Introduction and heuristic considerations	3
§1.2. A one-phase singular perturbation problem	6
§1.3. The free boundary condition	17
Chapter 2. Viscosity Solutions and Their Asymptotic Developments	25
§2.1. The notion of viscosity solution	25
§2.2. Asymptotic developments	27
§2.3. Comparison principles	30
Chapter 3. The Regularity of the Free Boundary	35
§3.1. Weak results	35
§3.2. Weak results for one-phase problems	36
§3.3. Strong results	40
Chapter 4. Lipschitz Free Boundaries Are $C^{1,\gamma}$	43
§4.1. The main theorem. Heuristic considerations and strategy	43
§4.2. Interior improvement of the Lipschitz constant	47
§4.3. A Harnack principle. Improved interior gain	51
§4.4. A continuous family of R -subsolutions	53
§4.5. Free boundary improvement. Basic iteration	62

Chapter 5. Flat Free Boundaries Are Lipschitz	65
§5.1. Heuristic considerations	65
§5.2. An auxiliary family of functions	70
§5.3. Level surfaces of normal perturbations of ε -monotone functions	72
§5.4. A continuous family of R -subsolutions	74
§5.5. Proof of Theorem 5.1	76
§5.6. A degenerate case	80
Chapter 6. Existence Theory	87
§6.1. Introduction	87
§6.2. u^+ is locally Lipschitz	90
§6.3. u is Lipschitz	91
§6.4. u^+ is nondegenerate	95
§6.5. u is a viscosity supersolution	96
§6.6. u is a viscosity subsolution	99
§6.7. Measure-theoretic properties of $F(u)$	101
§6.8. Asymptotic developments	103
§6.9. Regularity and compactness	106
Part 2. Evolution Problems	
Chapter 7. Parabolic Free Boundary Problems	111
§7.1. Introduction	111
§7.2. A class of free boundary problems and their viscosity solutions	113
§7.3. Asymptotic behavior and free boundary relation	116
§7.4. R -subsolutions and a comparison principle	118
Chapter 8. Lipschitz Free Boundaries: Weak Results	121
§8.1. Lipschitz continuity of viscosity solutions	121
§8.2. Asymptotic behavior and free boundary relation	124
§8.3. Counterexamples	125
Chapter 9. Lipschitz Free Boundaries: Strong Results	131
§9.1. Nondegenerate problems: main result and strategy	131
§9.2. Interior gain in space (parabolic homogeneity)	135
§9.3. Common gain	138
§9.4. Interior gain in space (hyperbolic homogeneity)	141

§9.5. Interior gain in time	143
§9.6. A continuous family of subcaloric functions	149
§9.7. Free boundary improvement. Propagation lemma	153
§9.8. Regularization of the free boundary in space	157
§9.9. Free boundary regularity in space and time	160
Chapter 10. Flat Free Boundaries Are Smooth	165
§10.1. Main result and strategy	165
§10.2. Interior enlargement of the monotonicity cone	168
§10.3. Control of u_ν at a “contact point”	172
§10.4. A continuous family of perturbations	174
§10.5. Improvement of ε -monotonicity	177
§10.6. Propagation of cone enlargement to the free boundary	180
§10.7. Proof of the main theorem	183
§10.8. Finite time regularization	185
Part 3. Complementary Chapters: Main Tools	
Chapter 11. Boundary Behavior of Harmonic Functions	191
§11.1. Harmonic functions in Lipschitz domains	191
§11.2. Boundary Harnack principles	195
§11.3. An excursion on harmonic measure	201
§11.4. Monotonicity properties	203
§11.5. ε -monotonicity and full monotonicity	205
§11.6. Linear behavior at regular boundary points	207
Chapter 12. Monotonicity Formulas and Applications	211
§12.1. A 2-dimensional formula	211
§12.2. The n -dimensional formula	214
§12.3. Consequences and applications	222
§12.4. A parabolic monotonicity formula	230
§12.5. A singular perturbation parabolic problem	233
Chapter 13. Boundary Behavior of Caloric Functions	235
§13.1. Caloric functions in $\text{Lip}(1, 1/2)$ domains	235
§13.2. Caloric functions in Lipschitz domains	241
§13.3. Asymptotic behavior near the zero set	248
§13.4. ε -monotonicity and full monotonicity	256

§13.5. An excursion on caloric measure	262
Bibliography	265
Index	269
