Errata: A network that uses few active neurones to code visual input predicts the diverse shapes of cortical receptive fields

Martin Rehn and Friedrich T. Sommer

Journal of Computational Neuroscience 22:2, April 2007

There is an error in equations (8–9). The argument to the Heaviside function should be $c_i(d_i - \theta/c_i - c_i/2)$, yielding the equations:

$$y_i \leftarrow H(\frac{T_{ii}}{2} - \sum_{j \neq i} T_{ij} y_j - \theta) = H(c_i(d_i - \theta/c_i - c_i/2))$$
 (8)

$$b_i = a_i y_i = d_i H(c_i (d_i - \theta/c_i - c_i/2))$$
 (9)

$$b_i = a_i y_i = d_i H(c_i (d_i - \theta/c_i - c_i/2))$$
with $d_i = c_i - \sum_{j \neq i} C_{ij} c_j y_j$ (10)

This does not affect any other parts of the paper, or the reported results. The authors sincerely thank Michael Gutmann, University of Helsinki, for bringing this to our attention.
