A NEW CONSTRUCTION FOR HADAMARD MATRICES[1]

BY L. D. BAUMERT AND MARSHALL HALL, JR.

Communicated by J. D. Swift, August 24, 1964

An *Hadamard matrix* H is a square matrix of *ones* and *minus ones* whose row (and hence column) vectors are orthogonal. The order n of an Hadamard matrix is necessarily 1, 2 or $4t$ with $t=1, 2, 3, \cdots$. It has been conjectured that this condition ($n=1$, 2 or $4t$) also insures the existence of an Hadamard matrix. Constructions have been given for particular values of n and even for various infinite classes of values. While other constructions exist, those given by [1]–[7] exhaust the previously known values of n. This paper gives a new construction which yields, among others, the previously unknown value $n=156$, leaving only two undecided values of $n=4t\leqq 200$ (these are 116 and 188).

An Hadamard matrix is said to be of the *Williamson type* if it has the structure imposed by Williamson [6], that is

$$H = \begin{vmatrix} A & B & C & D \\ -B & A & -D & C \\ -C & D & A & -B \\ -D & -C & B & A \end{vmatrix},$$

where each of A, B, C, D is a symmetric circulant $t\times t$ matrix. Notice that if a Williamson type matrix exists for $n=4t$, then an Hadamard matrix (not obviously Williamson) of order $m=12t$ would exist provided one could find a 12×12 matrix with the following properties. Each row and column must contain precisely three $\pm A$'s, three $\pm B$'s, three $\pm C$'s, three $\pm D$'s and the rows must be formally orthogonal (i.e., A, B, C, D are to be considered as independent quantities). We have discovered such a matrix and display it as Figure 1.

Among the ***known*** orders of Williamson type matrices [1], [6], only 52 yields a new value of n by this construction. This gives an Hadamard matrix of order 156. For definiteness, the first rows of A, B, C, D for one of the Williamson type Hadamard matrices of order 52 are given (here $+$ means $+1$ and $-$ stands for -1).

[1] This paper presents the results of one phase of research carried out at the Jet Propulsion Laboratory, California Institute of Technology, under contract number NAS 7-100, sponsored by the National Aeronautics and Space Administration.

	1	2	3	4	5	6	7	8	9	10	11	12	13
