

Paul A. Fuhrmann

A Polynomial Approach to Linear Algebra

Springer

Contents

Preface	vii
1 Preliminaries	1
1.1 Maps	1
1.2 Groups	3
1.3 Rings and Fields	8
1.4 Modules	28
1.5 Exercises	30
1.6 Notes and Remarks	32
2 Linear Spaces	33
2.1 Linear Spaces	33
2.2 Linear Combinations	35
2.3 Subspaces	35
2.4 Linear Dependence and Independence	37
2.5 Subspaces and Bases	40
2.6 Direct Sums	41
2.7 Quotient Spaces	43
2.8 Coordinates	45
2.9 Change of Basis Transformations	46
2.10 Lagrange Interpolation	48
2.11 Taylor Expansion	50
2.12 Exercises	51
2.13 Notes and Remarks	52

3	Determinants	53
3.1	Basic Properties	53
3.2	Cramer's Rule	58
3.3	The Sylvester Resultant	60
3.4	Exercises	62
3.5	Notes and Remarks	64
4	Linear Transformations	65
4.1	Linear Transformations	65
4.2	Matrix Representations	73
4.3	Linear Functionals and Duality	77
4.4	The Adjoint Transformation	84
4.5	Polynomial Module Structure on Vector Spaces	86
4.6	Exercises	95
4.7	Notes and Remarks	96
5	The Shift Operator	97
5.1	Basic Properties	97
5.2	Circulant Matrices	107
5.3	Rational Models	110
5.4	The Chinese Remainder Theorem	113
5.5	Hermite Interpolation	114
5.6	Duality	115
5.7	Reproducing Kernels	120
5.8	Exercises	123
5.9	Notes and Remarks	125
6	Structure Theory of Linear Transformations	127
6.1	Cyclic Transformations	127
6.2	The Invariant Factor Algorithm	134
6.3	Noncyclic Transformations	137
6.4	Diagonalization	141
6.5	Exercises	144
6.6	Notes and Remarks	149
7	Inner Product Spaces	151
7.1	Geometry of Inner Product Spaces	151
7.2	Operators in Inner Product Spaces	157
7.3	Unitary Operators	160
7.4	Self-Adjoint Operators	164
7.5	Singular Vectors and Singular Values	176
7.6	Unitary Embeddings	179
7.7	Exercises	183
7.8	Notes and Remarks	185

8	Quadratic Forms	187
8.1	Preliminaries	187
8.2	Sylvester's Law of Inertia	190
8.3	Hankel Operators and Forms	196
8.4	Bezoutians	200
8.5	Representation of Bezoutians	204
8.6	Diagonalization of Bezoutians	208
8.7	Bezout and Hankel Matrices	215
8.8	Inversion of Hankel Matrices	221
8.9	Continued Fractions and Orthogonal Polynomials	228
8.10	The Cauchy Index	240
8.11	Exercises	245
8.12	Notes and Remarks	249
9	Stability	251
9.1	Root Location Using Quadratic Forms	251
9.2	Exercises	268
9.3	Notes and Remarks	269
10	Elements of System Theory	271
10.1	Introduction	271
10.2	Systems and Their Representations	272
10.3	Realization Theory	277
10.4	Stabilization	292
10.5	The Youla-Kucera Parametrization	297
10.6	Exercises	300
10.7	Notes and Remarks	303
11	Hankel Norm Approximation	305
11.1	Introduction	305
11.2	Preliminaries	307
11.3	Schmidt Pairs of Hankel Operators	323
11.4	Duality and Hankel Norm Approximation	330
11.5	Nevanlinna-Pick Interpolation	337
11.6	Hankel Approximant Singular Values	339
11.7	Exercises	349
11.8	Notes and Remarks	351
	References	353
	Index	357
