

# **A Practical Approach to Chiral Separations by Liquid Chromatography**

Edited by  
G. Subramanian

Weinheim · New York  
Basel · Cambridge · Tokyo

# Contents

## **1 An Introduction to Enantioseparation by Liquid Chromatography**

*Charles A. White and Ganapathy Subramanian*

1.1	Introduction .....	1
1.1.1	What is Chirality? .....	1
1.1.2	What Causes Chirality? .....	2
1.1.3	Why is Chirality Important? .....	4
1.2	Industries which Require Enantioseparations .....	4
1.2.1	Pharmaceutical Industry .....	4
1.2.2	Agrochemical Industry .....	5
1.2.3	Food and Drink Industry .....	6
1.2.4	Petrochemical Industry .....	6
1.3	Chiral Liquid Chromatography .....	7
1.3.1	Type I Chiral Phases .....	8
1.3.2	Type II Chiral Stationary Phases .....	10
1.3.3	Type III Chiral Stationary Phases .....	10
1.3.3.1	Microcrystalline Cellulose Triacetate and Tribenzoate .....	10
1.3.3.2	Cyclodextrins .....	11
1.3.3.3	Crown Ethers .....	11
1.3.3.4	Synthetic Polymers .....	12
1.3.4	Type IV Chiral Stationary Phases .....	13
1.3.5	Type V Chiral Stationary Phases .....	13
1.3.6	Mobile Phase Additives .....	14
1.3.6.1	Metal Complexes .....	14
1.3.6.2	Ion-pair Formation .....	15
1.3.6.3	Uncharged Chiral Additives .....	15
1.4	The Future .....	16

## **2 Modeling Enantiodifferentiation in Chiral Chromatography**

*Kenny B. Lipkowitz*

2.1	Introduction .....	19
2.2	Modeling .....	19

---

2.3	Computational Tools .....	22
2.3.1	Quantum Mechanics .....	22
2.3.2	Molecular Mechanics .....	23
2.3.3	Molecular Dynamics .....	24
2.3.4	Monte Carlo Simulations .....	24
2.3.5	Graphics .....	25
2.4	Modeling Enantioselective Binding in Chromatography .....	26
2.4.1	Type I CSPs .....	26
2.4.2	Type II CSPs .....	41
2.4.3	Type III CSPs .....	44
2.5	Related Studies .....	49
2.6	Summary .....	50
<b>3</b>	<b>Regulatory Implications and Chiral Separations</b>	
	<i>Jeffrey R. Brown</i>	
3.1	Introduction .....	57
3.2	Licensing of Medicinal Products .....	57
3.3	Implications of Chirality .....	58
3.3.1	Stereoisomerism .....	58
3.3.2	Biological Significance of Stereoisomerism .....	60
3.3.3	Chirality and Medicinal Products .....	63
3.4	Nomenclature of Mixtures of Isomers .....	64
3.5	Attitudes Towards Chirality .....	64
3.6	The Future .....	66
<b>4</b>	<b>Enantiomer Separation Using Tailor-Made Phases Prepared by Molecular Imprinting</b>	
	<i>Börje Sellergren</i>	
4.1	Introduction .....	69
4.2	Historical Development .....	70
4.3	CSP Preparation and Evaluation .....	74
4.4	Polymer Enantioselectivity-Structural Correlations .....	74
4.5	Polymer Substrate Selectivity – For Better or for Worse? .....	78
4.5.1	Examples of High Substrate Selectivity – Antibody-Like Recognition .....	78
4.5.2	Examples of Low Substrate Selectivity .....	80
4.6	Nature of the Sites .....	82
4.7	How to Increase Affinity and Selectivity .....	83
4.7.1	Stability of Template Assemblies .....	83
4.7.1.1	Concentration of MAA in Monomer Mixture .....	83
4.7.1.2	Polymerization Temperature .....	84

4.7.1.3	Solvent .....	84
4.7.2	Other Functional Monomers .....	86
4.8	Structure and Morphology of Imprinted Polymers .....	87
4.9	A Packing for Ion Exchange and Enantiomer Separation .....	87
4.10	Column Performance and Saturation Capacity .....	90
4.11	Conclusions and Outlook .....	92

**5 Cyclodextrin Bonded Chiral Stationary Phases in Enantiomer Separations**

*Apryll M. Stalcup*

5.1	Introduction .....	95
5.2	'Magic' Mobile Phase .....	96
5.3	Derivatized Cyclodextrin-Bonded Phases .....	98
5.4	Hydroxypropyl- $\beta$ -CD CSP .....	99
5.5	Normal Phase CSP .....	103
5.6	Naphthylethylcarbamoylated $\beta$ -CD CSP .....	104
5.7	Applications to Biological Samples .....	111
5.8	Conclusions .....	113

**6 Polysaccharide Phases in Enantioseparations**

*Jules Dingenen*

6.1	Introduction .....	115
6.2	Cellulose Triacetate (CTA) .....	117
6.3	Coated Cellulose and Amylose Derivatives .....	124
6.3.1	Mobile Phase Effects on Retention and Stereoselectivity .....	127
6.3.2	Effect of the Solute Structure on Stereoselectivity .....	139
6.3.3	Influence of Temperature .....	147
6.3.4	Quantitative Analysis .....	150
6.3.5	Preparative Chromatographic Applications .....	155
6.3.6	Micro-LC ( $\mu$ -LC) Applications .....	160
6.4	Benzoyl Cellulose Beads in the Pure Polymeric Form .....	163
6.5	Microcrystalline Tribenzoylcellulose .....	174
6.6	Conclusions .....	178

**7 Separation of Enantiomers by Protein-Based Chiral Phases**

*Stig Allenmark*

7.1	Introduction .....	183
7.1.1	Early Observations of Chiral Discrimination by Proteins .....	183

7.1.2	Affinity Chromatography and the Reciprocity Principle .....	185
7.1.3	Immobilized Proteins for Chiral Separations .....	185
7.2	Various Principles Used for Immobilization of Proteins to Liquid Chromatography Supports .....	186
7.2.1	Non-crosslinked Phases .....	186
7.2.1.1	Physical Immobilization by Adsorption .....	186
7.2.1.2	Heterobifunctional Reagents for the Functionalization of Silica Matrices .....	186
7.2.1.3	Covalent Binding of Proteins via Homobifunctional Reagents ....	187
7.2.2	Crosslinked Phases .....	187
7.2.2.1	Physical Immobilization via Homobifunctional Reagents .....	187
7.2.2.2	Immobilization by Covalent Binding and Crosslinking .....	187
7.3	General Techniques for Regulation of Retention and Resolution. Mobile Phase Optimization .....	188
7.4	Different Protein Phases for Chiral Reversed Phase Liquid Chromatography and their Use .....	190
7.4.1	Serum Albumin (BSA and HSA) .....	191
7.4.2	Orosomucoid or $\alpha_1$ -Acid Glycoprotein (AGP) .....	193
7.4.3	Ovomucoid (OVM) .....	194
7.4.4	Cellobiohydrolase-I (CBH-I) .....	196
7.4.5	Avidin .....	198
7.4.6	Chymotrypsin (CT) .....	199
7.4.7	Ovotransferrin or Conalbumin .....	200
7.5	Selected Examples of Useful Applications .....	201
7.5.1	Determination of Reaction Stereochemistry .....	201
7.5.1.1	Stereoselective Monitoring of Pharmacokinetics .....	201
7.5.1.2	Stereoselectivity in Enzyme-Catalyzed Reactions .....	205
7.5.2	Determination of Enantiomeric Purity .....	207
7.5.3	Preparative-Scale Isolation of Pure Enantiomers .....	209
7.5.4	Studies of Drug-Albumin Binding .....	209
7.6	Some Experimental Observations Related to the Mechanism of Retention and Chiral Recognition .....	210
7.7	Special Microanalytical Techniques .....	211
7.7.1	Miniaturization of the Liquid Chromatographic System .....	211
7.7.2	Capillary Electrophoresis .....	212
7.8	Some Concluding Remarks .....	213

## 8 **Optically Active Polyacrylamide/Silica Composites and Related Packings and their Application in Chiral Separations**

*Joachim N. Kinkel*

8.1	Introduction .....	217
8.2	The Chromatographer's View: How to Define the "Ideal Support?" .....	219

8.3	The Synthesis of Polymer/Silica Composites .....	223
8.3.1	The Deposition of Preformed Polymers on the Surface of Inorganic Oxides .....	224
8.3.2	Preparation of Preformed Polymers by Copolymerization of Optically Active Monomers and Comonomers Bearing Silane Functional Groups and Subsequent Reaction with the Silica Surface .....	232
8.3.3	Copolymerization of Optically Active Monomers with Vinyl- or (Meth)acryloxypropyl Modified Silica .....	233
8.3.4	Graft Polymerization of Optically Active Vinyl Compounds to Silica and Polar Modified Silica .....	237
8.3.5	Graft Polymerization of Optically Active Vinyl Compounds by UV-Radiation of Photoinitiator-Modified Silica .....	244
8.3.6	Graft Polymerization of Optically Active Vinyl Compounds Initiated by Ceric Nitrate/Diol Silica Redox Systems in Diluted Nitric Acid Solutions .....	246
8.4	Chromatographic Characterization of Optically Active Polyacrylamide/Silica Composites .....	247
8.4.1	Comparison of 'Brush-type' Monomeric Packings and Polymer Composites .....	247
8.4.2	Influence of the Vinyl Group Substituent of Optically Active Polyacrylamides on the Chromatographic Resolution of Enantiomers .....	250
8.4.3	Influence of Solvent on Retention, Enantioselectivity and Resolution .....	255
8.4.4	Structure/Enantioselectivity Relationship of Composites, Derived from the Ephedrin Skeleton .....	261
8.5	Chromatographic Applications .....	269

## 9      **Ion-Pair Chromatography in Enantiomer Separations**

*Curt Pettersson and Eve Heldin*

9.1	Introduction .....	279
9.2	Ion-Pair Chromatography .....	279
9.2.1	Batch Extraction .....	279
9.2.2	Liquid-Liquid Chromatography .....	281
9.2.3	Liquid-Solid Chromatography .....	283
9.3	Separation of Enantiomers Using a Chiral Counter Ion .....	285
9.3.1	Normal Phase Chromatography .....	287
9.3.1.1	Structure and Enantioselectivity .....	287
9.3.1.2	Mobile Phase Composition and Separation .....	295
9.3.1.3	Solid Phase and Separation .....	297
9.3.2	Reversed Phase Chromatography .....	301
9.4	Tartaric Acid Derivatives – Uncharged Chiral Selectors .....	302

9.4.1	Liquid Tartaric Acid Ester as Mobile or Liquid Stationary Phases	302
9.4.2	Tartaric Acid Esters as Dynamically Modified Stationary Phases ..	304
9.5	Miscellaneous .....	307
9.5.1	Proteins as Chiral Mobile Phase Additives .....	307
9.5.2	Crown Ethers as Dynamically Modified Stationary Phases .....	308

## **10 Separations of Enantiomeric Compounds by Chiral Selectors in the Mobile or Solvent Phase**

*Brian J. Clark*

10.1	Introduction .....	311
10.2	Nuclear Magnetic Resonance (NMR) .....	312
10.2.1	Chiral Shift Reagent Additives .....	312
10.2.2	Chiral Solvating Agents .....	312
10.2.3	Cyclodextrins and their Derivatives .....	313
10.3	Thin Layer Chromatography (TLC) .....	313
10.3.1	Chiral Stationary Phase TLC Plates .....	315
10.3.2	Enantioselectors Added to the Developing Solvent .....	316
10.4	Chiral Separations by Capillary Electrophoresis .....	316
10.4.1	Chiral Ligand Exchange in Capillary Electrophoresis .....	317
10.4.2	Chiral Micellar Separations by Capillary Electrophoresis .....	317
10.4.3	Chiral Separations with Cyclodextrins in Capillary Electrophoresis	319
10.5	Separations by Mobile Phase Additives in HPLC .....	322
10.5.1	Mobile Phase Additives in Ligand Exchange HPLC .....	322
10.5.2	Proteins as Chiral Selectors in HPLC .....	323
10.5.3	Inclusion Complexation in Chiral Separations by HPLC .....	324

## **11 Chiral HPLC in the Pharmaceutical Industry**

*Ian M. Mutton*

11.1	Introduction .....	329
11.1.1	Chiral Drugs: Single Enantiomers or Racemates? .....	329
11.1.1.1	Background .....	329
11.1.1.2	Biological Relevance of Stereospecificity .....	329
11.1.1.3	Regulatory Issues .....	330
11.1.1.4	The Pharmaceutical Industry .....	330
11.1.2	The Analyst's Role .....	331
11.1.3	Techniques for Chiral Analysis .....	332
11.1.3.1	Spectroscopy .....	332
11.1.3.2	Chiral Chromatography .....	332
11.2	Chiral Discrimination Using HPLC .....	333
11.2.1	General .....	333
11.2.2	Resolution Using Diastereomer Formation .....	333

11.2.3	Resolution Using Chiral Stationary Phases (CSPs)	335
11.2.3.1	Introduction	335
11.2.3.2	Type I CSPs	335
11.2.3.3	Type II CSPs	337
11.2.3.4	Type III CSPs	340
11.2.3.5	Type IV CSPs	342
11.2.3.6	Type V CSPs	343
11.2.3.7	Customized CSPs	345
11.2.4	Resolution Using Chiral Mobile Phase Additives (CMPAs)	346
11.2.4.1	Introduction	346
11.2.4.2	Cyclodextrins as CMPAs	346
11.2.4.3	Ligand Exchangers as CMPAs	347
11.2.4.4	Proteins as CMPAs	347
11.2.4.5	Chiral Ion-Pair Chromatography	347
11.2.5	Chiro-Optical Detection	348
11.2.6	Preparative Chiral Separations	348
11.3	Current and Future Trends	349
11.4	Conclusion	351

## 12 Bioanalytical Applications of Enantioselective High-Performance Liquid Chromatography

*Terence A. G. Noctor*

12.1	Introduction	357
12.1.1	Enantioselective Chromatographic Bioanalysis	358
12.2	Enantioselective Bioanalysis Using Chiral Derivatization	358
12.2.1	Indirect Chiral Resolution of Enantiomeric Amines in Biological Fluids	359
12.2.2	Indirect Chiral Resolution of Enantiomeric Alcohols in Biological Fluids	361
12.2.3	Indirect Chiral Resolution of Enantiomeric Acids in Biological Fluids	361
12.3	Direct High-Performance Liquid Chromatographic Separation of Enantiomers Using Chiral Stationary Phases	363
12.3.1	Protein-Based CSPs in the Analysis of Drug Enantiomers in Biological Fluids	364
12.3.1.1	$\alpha_1$ -Acid Glycoprotein	366
12.3.1.2	Ovomucoid	370
12.3.1.3	Serum Albumins	371
12.3.2	Cyclodextrin-Based CSPs	373
12.3.3	Brush Type CSPs	375
12.3.4	Polysaccharide-Based CSPs	377
12.3.4.1	Bioanalytical Applications of Derivatized Cellulose CSPs	377
12.3.4.2	Bioanalytical Applications of Derivatized Amylose CSPs	380

12.3.5	Biomedical Separations Using Other Types of CSP .....	380
12.3.5.1	CSPs Based on Synthetic Polymers .....	381
12.3.5.2	CSPs Based on Ternary Complexation (Ligand Exchange Chromatography) .....	381
12.4	Multidimensional Approaches to Chiral Analysis by HPLC .....	381
12.4.1	Sequential Achiral-Chiral Chromatography in Bioanalysis .....	382
12.4.2	Determination of Enantiomers in Biological Matrices Using Serially Coupled Achiral-Chiral Chromatography .....	383
12.4.3	Determination of Enantiomers in Biological Matrices Using Achiral-Chiral Chromatographic Systems, Coupled by Means of a Switching Valve .....	385
12.5	Direct Chromatographic Bioanalysis of Enantiomers Using Chiral Mobile Phase Additive .....	389
12.5.1	Chiral Ligand Exchange Additives to the Mobile Phase .....	389
12.5.2	Chiral Mobile Phase Additives Forming Diastereomeric Ion-Pairs .	389
12.5.3	Cyclodextrins as Chiral Mobile Phase Additives .....	390
12.6	Conclusion .....	391
<b>Index</b>	.....	<b>397</b>
