Introduction 1

1 Basic features of smooth worlds 17

2 Basic differential calculus 26
2.1 The derivative of a function 26
2.2 Stationary points of functions 29
2.3 Areas under curves and the Constancy Principle 30
2.4 The special functions 32

3 First applications of the differential calculus 37
3.1 Areas and volumes 37
3.2 Volumes of revolution 42
3.3 Arc length; surfaces of revolution; curvature 45

4 Applications to physics 50
4.1 Moments of inertia 50
4.2 Centres of mass 55
4.3 Pappus' theorems 56
4.4 Centres of pressure 59
4.5 Stretching a spring 61
4.6 Flexure of beams 61
4.7 The catenary, the loaded chain, and the bollard-rope 64
4.8 The Kepler–Newton areal law of motion under a central force 68

5 Multivariable calculus and applications 70
5.1 Partial derivatives 70
5.2 Stationary values of functions 73
5.3 Theory of surfaces 76
5.4 The heat equation 80
5.5 The basic equations of hydrodynamics 81
5.6 The Cauchy–Riemann equations for complex functions 84

6 The definite integral. Higher-order infinitesimals 87
6.1 The definite integral 87
6.2 Higher-order infinitesimals and Taylor's theorem 90
6.3 The three natural microneighbourhoods of zero 93

7 Synthetic differential geometry 94
7.1 Tangent vectors and tangent spaces 94
7.2 Vector fields 96
7.3 Differentials and directional derivatives 96

8 Smooth infinitesimal analysis as an axiomatic system 100
8.1 Natural numbers in smooth worlds 106
8.2 Nonstandard analysis 108

Appendix. Models for smooth infinitesimal analysis 111
