S4. Significant expression changes of the genes during growth of MG1363 Lac⁺ on lactose as compared to growth on undefined carbon sources of the rich M17 medium.

S5. Distribution of colonies on selective plates in a fluctuation assay. a. The number of MGLac+ colonies on CDM supplemented with lactose after plating 24 individual cultures. b. The number of colonies on CDM supplemented with rifampicin after plating 24 individual cultures. The number of cells plated per culture in panel a was 1.6×10^8 , while twice as many cells were plated for the cultures shown in panel b.
