November 1972

## Acknowledgments

We wish to thank Dale Calder, Robert Diaz, Vicki Gibson, Frederick Kazama, John Musick, Franklyn Ott, Frank Perkins, and Dave Zwerner for advice concerning classification schemes within their taxonomic specialties. Rosalie Vogel assisted in coding. Amos Bien kindly prepared computer programs to sort and print the code. Lillian Hudgins punched and verified the IBM cards.

This project was funded by a U. S. Army Corps of Engineers, Baltimore District grant to the Virginia Institute of Marine Science, Smithsonian Institution and the University of Maryland as members of the Chesapeake Research Consortium, Inc. The grant was administered by the Research Applied to National Needs Program of the National Science Foundation. It represents a portion of the "Existing conditions Report on the Biota of the Chesapeake Bay" submitted to the Corps by the Chesapeake Research Consortium, Inc.

Alphabetical List of Taxonomic Codes	63

## Introduction

The computer analysis of biological data frequently necessitates the assignment of a numeric code to species or higher taxa. In the past, individual investigators at the Virginia Institute of Marine Science (VIMS) and other research organizations in the Chesapeake Bay area have developed their own codes. Since we now plan to establish central data banks, it is almost essential that everyone use the same code.

We have developed a ten digit code which permits analysis at five different taxonomic levels. The first two pairs of digits separate organisms at the levels of phylum or class and class or order depending upon the most useful method of subdividing each major taxon. The next three pairs of digits code families, genera, and species (or taxa of subspecific rank).

Example:

<u>Code</u>	<u>Taxon</u>	<u>Taxonomic Level</u>
49	Mollusca	Phylum
4908	Pelecypoda	Class
490855	Veneridae	Family
49085503	<u>Mercenaria</u>	Genus
4908550302	<u>Mercenaria campechiensis</u>	Species

Families were assigned codes in the order in which they appear in the VIMS checklist (Wass, 1972) in cases where there are not many families in the class or order coded. In those classes or orders in which there are many families, family codes were assigned on the basis of complete alphabetical or phylogenetic lists of families (e. g. Gastropoda and Amphipoda) or on the basis of blocks of family numbers preassigned to orders or sub-orders within the higher taxon (e. g. Annelida and Echinodermata). Codes for the genus and species levels have been assigned in the order in which they appear in the VIMS checklist (Wass, 1972). In addition, most of the plant species in the list prepared by the Department of Botany of the University of Maryland (Krauss, 1971), and some insects, all absent from the VIMS checklist, have also been given codes.

The codes for the two highest taxonomic levels were selected on the basis of anticipated input/output requirements rather than a strict hierarchical system. Thus the primary division (first pair of digits) was made at the level of phylum in the Mollusca, class in the Arthropoda, and subclass or order in the Chordata. Although the VIMS and Maryland checklists are almost entirely restricted to marine organisms, the highest two taxonomic levels have been chosen so that all members of terrestrial, freshwater or other ecosystems could eventually be assigned a unique ten-digit code. The systematic authorities for the classification scheme employed are given in Table 1.

The taxonomic codes are listed below in both phylogenetic and alphabetical order. To save space, genera are not listed separately (unless only the genus is known from the Bay). To code the generic name of genera for which species are listed, simply drop the last two digits of the code for any of the species.

The master file for the taxonomic code is maintained in the VIMS Department of Data Processing. Codes for taxa not included in this report can be obtained from Dr. Marvin L. Wass at VIMS. Errors and suggestions for improvements should also be sent to Dr. Wass.

Classification authorities for the taxonomic code

---

Taxon	Classification Authority
Viruses	Goodheart (1967)
Bacteria	Breed <u>et al.</u> (1957)
Algae (Cyanophyta-Rhodophyta)	Papenfuss (1955)
Fungi (Myxomycotina-Deuteromycetes)	Ainsworth (1961)
Higher Plants (Lichens-Anthophyta)	Bold (1957) Radford <u>et al.</u> (1968)
Invertebrates, General	Barnes (1968)
Protozoa	Honigberg <u>et al.</u> (1964)
Cnidaria	Hyman (1940) D. R. Calder (personal communication)
Nematoda	Crofton (1966)
Annelida	Dales (1963) Brinkhurst and Jamieson (1972)
Mollusca	Hyman (1967) Taylor and Sohl (1962) Abbott (1954)
Crustacea	Waterman & Chace (1961) Barnard (1969) Schultz (1969) Williams (1965)
Insecta	Jaques (1947)
