Adaptive Control of Systems with Actuator Failures

With 50 Figures

Springer

Table of Contents

Preface	v
Acknowledgements	xi
1. Introduction	1
1.1 Actuator Failure Compensation	1
1.1.1 Literature Overview	2
1.1.2 Research Motivation	4
1.2 Adaptive Control System Concepts	4
1.3 Adaptive Actuator Failure Compensation	7
1.3.1 Failure Compensation for Linear Systems	7
1.3.2 Failure Compensation for Nonlinear Systems	9
1.3.3 Basic Assumption	10
1.3.4 Basic Actuation Scheme for Failure Compensation	11
1.3.5 Redundancy and Failure Uncertainty	12
1.4 Book Outline	13
2. State Feedback Designs for State Tracking	15
2.1 Fundamental Issues and Solutions	15
2.1.1 Basic Plant-Model Matching Conditions	17
2.1.2 Actuator Failure Compensation	19
2.1.3 Adaptive Compensation Design	21
2.2 Designs for Parametrized Varying Failures	27
2.2.1 Plant-Model Matching Control Design	27
2.2.2 Adaptive Control Design	29
2.3 Designs for Unparametrizable Failures	31
2.3.1 Stabilizing Control	32
2.3.2 Adaptive Control Design	34
2.3.3 Robust Adaptation	36
2.4 Designs for Multigroup Actuators	38
2.5 Design for up to $m - q$ Actuator Failures	42

2.5.1	Problem Statement	43
2.5.2	Plant-Model Matching Control	44
2.5.3	Adaptive Control Design	47
2.5.4	Boeing 747 Lateral Control Simulation	51
2.6	Concluding Remarks	52
3.	State Feedback Designs for Output Tracking	55
3.1	Designs for Lock-in-Place Failures	55
3.1.1	Problem Statement	56
3.1.2	A Plant-Model Output Matching Controller	56
3.1.3	Adaptive Control Design	59
3.1.4	Boeing 747 Lateral Control Simulation I	63
3.2	Designs for Varying Failures	67
3.2.1	Problem Statement	67
3.2.2	A Lemma for Output Matching	70
3.2.3	Adaptive Rejection of Unmatched Input Disturbance .	73
3.2.4	Application to Actuator Failure Compensation	75
3.2.5	Extension to the General Case	78
3.2.6	Boeing 747 Lateral Control Simulation II	80
4.	Output Feedback Designs for Output Tracking	85
4.1	Problem Statement	85
4.2	Plant-Model Output Matching	87
4.3	Adaptive Control	90
4.4	Boeing 747 Lateral Control Simulation	94
4.5	Designs for Varying Failures	95
4.5.1	Adaptive Disturbance Rejection	98
4.5.2	Adaptive Failure Compensation	100
5.	Designs for Multivariable Systems	103
5.1	Problem Statement	104
5.2	Plant-Model Matching Control	106
5.3	Adaptive Control Designs	111
5.3.1	Basic Controller Structure	111
5.3.2	Error Equation	112
5.3.3	Design I: The Basic Scheme	113
5.3.4	Design II: Based on SDU Factorization of K_{pa}	115
5.4	Boeing 737 Lateral Control Simulation	118
5.5	Concluding Remarks	121

6. Pole Placement Designs	123
6.1 Problem Statement	123
6.2 Nominal Matching Controller Design	124
6.3 Adaptive Control Scheme	130
6.4 DC-8 Lateral Control Simulation	132
7. Designs for Linearized Aircraft Models.....	137
7.1 Linearized Aircraft Models	137
7.2 Design for Uncertain Actuator Failures	139
7.2.1 Problem Statement	140
7.2.2 Adaptive Compensation Scheme.....	141
7.2.3 Longitudinal Control Simulation I	142
7.3 State Tracking Design.....	143
7.3.1 Problem Statement	143
7.3.2 Adaptive Control Scheme.....	145
7.3.3 Longitudinal Control Simulation II	146
7.4 Output Tracking Designs	152
7.4.1 Problem Statement	152
7.4.2 Adaptive Control Schemes.....	153
7.4.3 Longitudinal Control Simulation III	155
7.5 Concluding Remarks	156
8. Robust Designs for Discrete-Time Systems.....	163
8.1 Problem Statement	164
8.2 Plant-Model Output Matching	165
8.3 Adaptive Control Design	168
8.4 Robust Adaptive Failure Compensation	170
8.4.1 Robustness of Plant-Model Matching	171
8.4.2 Robust Adaptive Laws	172
8.5 Boeing 747 Lateral Control Simulation	174
9. Failure Compensation for Nonlinear Systems.....	177
9.1 Problem Formulation	177
9.2 Design for Feedback Linearizable Systems	179
9.3 An Alternative Design	185
9.4 Issues for Nonlinear Dynamics	190
10. State Feedback Designs for Nonlinear Systems	195
10.1 Design for Systems Without Zero Dynamics	195
10.1.1 Output Matching Design	199
10.1.2 Adaptive Actuator Failure Compensation	201

10.1.3	Wing Rock Control of an Aircraft Model	210
10.2	Design for Systems with Zero Dynamics	211
10.2.1	An Adaptive Failure Compensation Design	213
10.2.2	An Adaptive Design with Relaxed Conditions	219
10.2.3	Robustness	224
10.2.4	Longitudinal Control of a Twin Otter Aircraft	225
11.	Nonlinear Output Feedback Designs	233
11.1	Problem Statement	233
11.2	Adaptive Compensation Control	236
11.2.1	State Observer	238
11.2.2	Backstepping Design	238
11.3	Stability Analysis	246
11.4	Design for State-Dependent Nonlinearities	248
11.4.1	Reduced-Order Observer	249
11.4.2	Full-Order Observer	250
11.4.3	Design Procedure	251
11.4.4	Longitudinal Control of a Hypersonic Aircraft	253
11.5	Concluding Remarks	262
12.	Conclusions and Research Topics	265
Compensation Designs	265	
System Performance	266	
Robustness Issue	266	
Open Problems	268	
Potential Applications	268	
Appendix	269	
A.1	Model Reference Adaptive Control	269
A.1.1	MRAC: State Feedback for State Tracking	269
A.1.2	MRAC: State Feedback for Output Tracking	272
A.1.3	MRAC: Output Feedback for Output Tracking	275
A.2	Multivariable MRAC	279
A.3	Adaptive Pole Placement Control	282
References	285	
Index	295
