

# ADAPTIVE OPTICS IN ASTRONOMY

*Edited by*

FRANÇOIS RODDIER

*Institute for Astronomy, University of Hawaii, USA*

**CAMBRIDGE**  
**UNIVERSITY PRESS**

# Contents

<i>List of contributors</i>	page vii
<b>Part one: Introductory background</b>	1
1 Historical context <i>F. Roddier</i>	3
2 Imaging through the atmosphere <i>F. Roddier</i>	9
<b>Part two: The design of an adaptive optics system</b>	23
3 Theoretical aspects <i>F. Roddier</i>	25
4 Wave-front compensation devices <i>M. Séchaud</i>	57
5 Wave-front sensors <i>G. Rousset</i>	91
6 Control techniques <i>P.-Y. Madec</i>	131
7 Performance estimation and system modeling <i>M. Northcott</i>	155
<b>Part three: Adaptive optics with natural guide stars</b>	169
8 The COME-ON/ADONIS systems <i>G. Rousset &amp; J.-L. Beuzit</i>	171
9 The UH-CFHT systems <i>F. Roddier &amp; F. Rigaut</i>	205
10 Adaptive optics in solar astronomy <i>J. Beckers</i>	235
<b>Part four: Adaptive optics with laser beacons</b>	253
11 Overview of adaptive optics with laser beacons <i>D. Sandler</i>	255
12 The design of laser beacon AO systems <i>D. Sandler</i>	271
13 Laser beacon adaptive optics systems <i>D. Sandler</i>	331
<b>Part five: The impact of adaptive optics in astronomy</b>	349
14 Observing with adaptive optics <i>P. Léna and O. Lai</i>	351
15 Astronomical results <i>P. Léna and O. Lai</i>	371
16 Future expectations <i>F. Roddier</i>	399
<i>Glossary of acronyms</i>	403
<i>Index</i>	407
