<i>List of contributors</i>	xiii
<i>Preface</i>	xv
1 Introduction	1
<i>N. Kalouptsidis and S. Theodoridis</i>	
2 Basic Concepts and Algorithmic Schemes	7
<i>N. Kalouptsidis and S. Theodoridis</i>	
2.1 Introduction	7
2.2 System identification	8
2.3 Signal processing	10
2.4 Efficiency issues in adaptive algorithms	11
2.5 Linear regression	14
2.5.1 Steady-state performance of the LR estimate and the Wiener filter	16
2.5.2 State-space forms of the LR estimate and the RLS algorithm	18
2.5.3 Approximate realizations of the LR estimate and the LMS algorithm	22
2.5.4 The instrumental variable method	24
2.6 General prediction models	26
2.6.1 The general LS optimization problem and the prediction error method	26
2.6.2 Predictors in state-space form and the Kalman filter	33
2.7 Fast algorithms for Wiener filtering	34
2.7.1 The Levinson algorithm	35
2.7.2 The split Levinson algorithm	38
2.7.3 The lattice family	40
2.7.4 The Schur algorithm	43
2.8 Fast algorithms for linear regression	47
2.8.1 Fast RLS algorithms	48
2.8.2 Square root <i>QR</i> and lattice algorithms	49
2.8.3 The multichannel case	53
References	55

3	General Structure of Adaptive Algorithms: Adaptation and Tracking	58
	<i>Lennart Ljung</i>	
3.1	Introduction	58
3.2	Optimal algorithms for tracking drifting parameters	59
3.2.1	A basic signal model	59
3.2.2	A signal model with global and local trends	61
3.3	Some <i>ad hoc</i> algorithms for tracking drifting parameters	62
3.3.1	The RLS algorithm	62
3.3.2	The LMS algorithm	64
3.3.3	Estimating the unknown covariances	64
3.4	Algorithms for tracking abruptly changing parameters	65
3.4.1	Formulation	65
3.4.2	Detection algorithms	65
3.4.3	ML-type algorithms	66
3.5	Algorithms for general non-linear regressions	66
3.6	Asymptotic properties of the decreasing gain case	69
3.7	Tracking ability of the algorithms	69
3.8	A useful lemma	72
3.9	The tracking error for M -dependent regressor sequences	74
3.10	The tracking error for mixing regressor sequences	77
3.11	Evaluation of the error in the frequency domain	78
3.12	Conclusions	81
	References	81
4	The Least Mean Square Family	84
	<i>William A. Sethares</i>	
4.1	Introduction	84
4.2	LMS and its children	86
4.2.1	Normalized LMS	88
4.2.2	Leakage	89
4.2.3	Dead zone	90
4.2.4	Signed-error LMS	90
4.2.5	Signed-regressor LMS	91
4.2.6	Sign-sign LMS	92
4.2.7	Quantized state LMS	92
4.2.8	Least mean fourth	93
4.2.9	Median LMS	93
4.3	Expected behaviour approach	93
4.4	The deterministic approach	96
4.4.1	Analytical background	97
4.4.2	Persistence of excitation	99
4.5	The stochastic approximation approach	104
4.5.1	Theoretical development	106

4.6	Examples, comparisons and discussion	110
4.6.1	LMS	111
4.6.2	Normalized LMS	112
4.6.3	Leakage	112
4.6.4	Dead zone	112
4.6.5	Signed error	113
4.6.6	Signed regressor	113
4.6.7	Sign–sign	114
4.6.8	Quantized state	116
4.6.9	Least mean fourth	116
4.6.10	Median LMS	116
4.6.11	Convergence and tracking of LMS and variants	117
4.7	Conclusion	119
	References	120
5	Fast Transversal RLS Algorithms	123
	<i>Dirk T. M. Slock and Thomas Kailath</i>	
5.1	Introduction	123
5.2	Adaptive filtering algorithms	128
5.2.1	The LMS algorithm	130
5.2.2	The RLS algorithm	132
5.2.3	Comparison of the tracking performance of LMS and RLS	134
5.2.4	Comparison of various RLS algorithms	136
5.3	Windowing issues in fast LS algorithms	137
5.3.1	Recursive least squares (RLS)	140
5.4	Prewindowed FTRLS algorithm derivation, definition and interpretation of algorithmic quantities	142
5.4.1	Vector space formulation and projection updating	142
5.4.2	Algorithm derivation (steady state)	147
5.4.3	Initialization and restarting	151
5.5	Computational redundancies and numerical stabilization	154
5.5.1	Hyperbolic rotations and numerical instability	154
5.5.2	An approach for the analysis of roundoff errors	155
5.5.3	Introducing redundancies in the FTRLS algorithm	156
5.5.4	Compact representation of the FTRLS algorithm	158
5.5.5	Averaging analysis of the error propagation	160
5.5.6	The limited range for λ and a possible way out	161
5.5.7	Wordlength considerations	163
5.5.8	Divisions	163
5.6	Growing- and sliding-window covariance FTRLS algorithms	164
5.6.1	The growing-window covariance (GWC) FTRLS algorithm	166
5.6.2	The sliding-window covariance (SWC) FTRLS algorithm	170
5.7	Modular (circular) multichannel and/or multiexperiment FTRLS algorithms	174

5.7.1	The multichannel RLS problem	174
5.7.2	The multiexperiment RLS problem	175
5.7.3	The multichannel multiexperiment RLS problem	175
5.7.4	The modular multichannel multiexperiment FTRL algorithm	177
5.7.5	Triangular factorization	182
	Notes	184
	References	184
6	Lattice algorithms	191
	<i>Fuyun Ling</i>	
6.1	The statistical view of order recursive estimation and the lattice structure	192
6.1.1	MMSE estimation and its geometric interpretation	192
6.1.2	Order recursive MMSE estimation	195
6.1.3	Lattice structure for MMSE estimation	198
6.1.4	Properties of the MMSE lattice estimator	203
6.2	Time-and-order recursive LS estimation and the basic LS lattice algorithm	206
6.2.1	Basic relations of ORLS estimation	206
6.2.2	Basic LS lattice algorithm with prewindowed data	213
6.3	Variations and extensions of the basic LS lattice algorithm	220
6.3.1	Variations of basic LS lattice algorithm with prewindowed data	220
6.3.2	Gradient lattice algorithms	231
6.3.3	Multichannel LS lattice algorithm	235
6.3.4	Other ORLS estimation algorithms	244
6.4	Convergence and numerical properties of lattice algorithms	245
6.4.1	Initial convergence of LS lattice algorithms	245
6.4.2	Tracking behaviour of lattice algorithms	248
6.4.3	Numerical stability and accuracy of lattice algorithms	251
6.5	Summary and conclusions	256
	References	256
7	The QR family	260
	<i>J. G. McWhirter and I. K. Proudler</i>	
7.1	Introduction	260
7.2	Narrowband beamforming	261
7.2.1	QR decomposition	261
7.2.2	Givens rotations	263
7.2.3	Parallel implementation	265
7.2.4	Square-root-free version	268
7.2.5	Direct residual extraction	271
7.2.6	Weight freezing and flushing	274

7.2.7	Parallel weight extraction	276
7.2.8	Comparison with recursive modified Gram–Schmidt algorithms	281
7.2.9	Comparison with Kalman filter algorithms	282
7.3	Adaptive FIR filtering	283
7.3.1	The QRD approach	283
7.3.2	Forward linear prediction	288
7.3.3	Backward linear prediction	290
7.3.4	The QRD least-squares lattice algorithm	292
7.3.5	The 'fast QRD' algorithm	296
7.3.6	Physical interpretation of fast algorithm parameters	301
7.3.7	Weight extraction from fast algorithms	305
7.3.8	Computer simulations	307
7.4	Wideband beamforming	313
7.4.1	Multichannel adaptive filters	313
7.4.2	Multichannel lattice	314
7.4.3	Multichannel fast QRD algorithm	316
7.5	Algorithm listings	318
	Notes	319
	References	320
8	Spectral analysis	322
	<i>S. Theodoridis and N. Kalouptsidis</i>	
8.1	Introduction	322
8.2	Basic guidelines from the theory of spectral analysis of stochastic processes	324
8.3	Parametric models and autoregressive spectral estimation	337
8.4	AR spectral estimation based on observation data	341
8.4.1	Schemes based on the Toeplitz structure of the autocorrelation matrix	341
8.4.2	Least-squares method	343
8.4.3	The forward backward LS method	356
8.4.4	Adaptive techniques	367
8.5	ARMA spectral analysis: basic directions	372
8.6	Modified Prony's technique for sinusoidal modelling	374

9	Channel equalization	388
	<i>C.F.N. Cowan</i>	
9.1	Introduction	388
9.2	Linear FIR equalizers	389

9.3	Adaptive algorithm performance	392
9.4	Subsymbol-spaced equalizers	395
9.5	Decision feedback equalizers	397
9.6	Complex equalizers	399
9.7	Non-linear equalizers	400
9.8	Conclusions	405
	References	405
10	Echo cancellation	407
	<i>Fuyun Ling</i>	
10.1	Echoes in telephone networks and their cancellation	408
10.1.1	Echoes in telephone networks and their impact on voice and data transmission	408
10.1.2	Voice echo control and cancellation	411
10.1.3	Modem data echo cancellation	414
10.1.4	Digital subscriber-loop echo cancellation	418
10.2	Data-driven Nyquist echo cancellers and their converging and tracking characteristics	418
10.2.1	Structures of modem data echo cancellers	419
10.2.2	Convergence characteristics of LMS Nyquist echo cancellers	428
10.2.3	Steady-state excess MSE and selection of step sizes	434
10.2.4	Comparison of analytic and real passband echo cancellers	436
10.3	Finite wordlength effects in echo cancellation	439
10.3.1	How finite wordlength affects echo canceller operation	439
10.3.2	Gradient averaging algorithm for echo canceller implementation	445
10.4	Related topics and references	448
10.4.1	Far echo frequency offset compensation	448
10.4.2	Analog and digital sampling rate conversion	451
10.4.3	Fast echo canceller training	455
10.4.4	Topics related to ISDN echo cancellation	456
10.4.5	Topics related to voice telephone echo cancellation	460
10.5	Concluding remarks	462
	Notes	463
