# Contents

Preface . . . . .	ix
Etymology . . . . .	xii
Special Notation . . . . .	xiii
<b>Chapter 1 Things Past . . . . .</b>	<b>1</b>
1.1. Some Number Theory . . . . .	1
1.2. Roots of Unity . . . . .	15
1.3. Some Set Theory . . . . .	25
<b>Chapter 2 Groups I . . . . .</b>	<b>39</b>
2.1. Introduction . . . . .	39
2.2. Permutations . . . . .	40
2.3. Groups . . . . .	51
2.4. Lagrange’s Theorem . . . . .	62
2.5. Homomorphisms . . . . .	73
2.6. Quotient Groups . . . . .	82
2.7. Group Actions . . . . .	96
<b>Chapter 3 Commutative Rings I . . . . .</b>	<b>116</b>
3.1. Introduction . . . . .	116
3.2. First Properties . . . . .	116
3.3. Polynomials . . . . .	126
3.4. Greatest Common Divisors . . . . .	131
3.5. Homomorphisms . . . . .	143
3.6. Euclidean Rings . . . . .	151
3.7. Linear Algebra . . . . .	158
Vector Spaces . . . . .	159
Linear Transformations . . . . .	171
3.8. Quotient Rings and Finite Fields . . . . .	182

<b>Chapter 4 Fields . . . . .</b>	198
4.1. Insolvability of the Quintic . . . . .	198
Formulas and Solvability by Radicals . . . . .	206
Translation into Group Theory . . . . .	210
4.2. Fundamental Theorem of Galois Theory . . . . .	218
<b>Chapter 5 Groups II . . . . .</b>	249
5.1. Finite Abelian Groups . . . . .	249
Direct Sums . . . . .	249
Basis Theorem . . . . .	255
Fundamental Theorem . . . . .	262
5.2. The Sylow Theorems . . . . .	269
5.3. The Jordan–Hölder Theorem . . . . .	278
5.4. Projective Unimodular Groups . . . . .	289
5.5. Presentations . . . . .	297
5.6. The Nielsen–Schreier Theorem . . . . .	311
<b>Chapter 6 Commutative Rings II . . . . .</b>	319
6.1. Prime Ideals and Maximal Ideals . . . . .	319
6.2. Unique Factorization Domains . . . . .	326
6.3. Noetherian Rings . . . . .	340
6.4. Applications of Zorn’s Lemma . . . . .	345
6.5. Varieties . . . . .	375
6.6. Gröbner Bases . . . . .	399
Generalized Division Algorithm . . . . .	400
Buchberger’s Algorithm . . . . .	411
<b>Chapter 7 Modules and Categories . . . . .</b>	423
7.1. Modules . . . . .	423
7.2. Categories . . . . .	442
7.3. Functors . . . . .	461
7.4. Free Modules, Projectives, and Injectives . . . . .	471
7.5. Grothendieck Groups . . . . .	488
7.6. Limits . . . . .	498
<b>Chapter 8 Algebras . . . . .</b>	520
8.1. Noncommutative Rings . . . . .	520
8.2. Chain Conditions . . . . .	533
8.3. Semisimple Rings . . . . .	550
8.4. Tensor Products . . . . .	574
8.5. Characters . . . . .	605
8.6. Theorems of Burnside and of Frobenius . . . . .	634

<i>Contents</i>	vii
<b>Chapter 9 Advanced Linear Algebra . . . . .</b>	646
9.1. Modules over PIDs . . . . .	646
9.2. Rational Canonical Forms . . . . .	666
9.3. Jordan Canonical Forms . . . . .	675
9.4. Smith Normal Forms . . . . .	682
9.5. Bilinear Forms . . . . .	694
9.6. Graded Algebras . . . . .	714
9.7. Division Algebras . . . . .	727
9.8. Exterior Algebra . . . . .	741
9.9. Determinants . . . . .	756
9.10. Lie Algebras . . . . .	772
<b>Chapter 10 Homology . . . . .</b>	781
10.1. Introduction . . . . .	781
10.2. Semidirect Products . . . . .	784
10.3. General Extensions and Cohomology . . . . .	794
10.4. Homology Functors . . . . .	813
10.5. Derived Functors . . . . .	830
10.6. Ext and Tor . . . . .	852
10.7. Cohomology of Groups . . . . .	870
10.8. Crossed Products . . . . .	887
10.9. Introduction to Spectral Sequences . . . . .	893
<b>Chapter 11 Commutative Rings III . . . . .</b>	898
11.1. Local and Global . . . . .	898
11.2. Dedekind Rings . . . . .	922
Integrality . . . . .	923
Nullstellensatz Redux . . . . .	931
Algebraic Integers . . . . .	938
Characterizations of Dedekind Rings . . . . .	948
Finitely Generated Modules over Dedekind Rings . . . . .	959
11.3. Global Dimension . . . . .	969
11.4. Regular Local Rings . . . . .	985
<b>Appendix The Axiom of Choice and Zorn's Lemma . . . . .</b>	A-1
<b>Bibliography . . . . .</b>	B-1
<b>Index . . . . .</b>	I-1
