| <b>CONTENTS OF THE BOOK WEB SITE</b>                                     | <b>xi</b>   |
| <b>PREFACE</b>   | <b>xiii</b> |
| <b>1 ESSENTIAL BACKGROUND</b>  | <b>1</b>    |
| 1.1 Steps in a Finite Element Solution / 2                               |             |
| 1.1.1 Two-Node Uniform Bar Element / 2                                   |             |
| 1.2 Interpolation Functions / 12   |             |
| 1.2.1 Lagrange Interpolation for Second-Order Problems / 14              |             |
| 1.2.2 Hermite Interpolation for Fourth-Order Problems / 14               |             |
| 1.2.3 Lagrange Interpolation for Rectangular Elements / 16               |             |
| 1.2.4 Triangular Elements / 21   |             |
| 1.3 Integration by Parts / 23  |             |
| 1.3.1 Gauss's Divergence Theorem / 23                                    |             |
| 1.3.2 Green-Gauss Theorem / 24   |             |
| 1.3.3 Green-Gauss Theorem as Integration by Parts in Two Dimensions / 24 |             |
| 1.4 Numerical Integration Using Gauss Quadrature / 25                    |             |
| 1.4.1 Gauss Quadrature for One-Dimensional Integrals / 25                |             |
| 1.4.2 Gauss Quadrature for Area Integrals / 26                           |             |
| 1.4.3 Gauss Quadrature for Volume Integrals / 28                         |             |
| 1.5 Mapped Elements / 28   |             |
| 1.5.1 Restrictions on Mapping of Areas / 29                              |             |
| 1.5.2 Derivatives of the Assumed Solution / 30                           |             |

|          |  |           |
|----------|--|-----------|
| 1.5.3    | Evaluation of Area Integrals / 31                                  |           |
| 1.5.4    | Evaluation of Boundary Integrals / 32                              |           |
|          | Problems / 33  |           |
| <b>2</b> | <b>ANALYSIS OF ELASTIC SOLIDS</b>                                  | <b>37</b> |
| 2.1      | Governing Equations / 37   |           |
| 2.1.1    | Stresses / 37  |           |
| 2.1.2    | Strains / 39   |           |
| 2.1.3    | Constitutive Equations / 40  |           |
| 2.1.4    | Temperature Effects and Initial Strains / 40                       |           |
| 2.1.5    | Stress Equilibrium Equations / 41                                  |           |
| 2.2      | General Form of Finite Element Equations / 41                      |           |
| 2.2.1    | Weak Form / 41   |           |
| 2.2.2    | Finite Element Equations / 43                                      |           |
| 2.3      | Tetrahedral Element / 45   |           |
| 2.3.1    | Interpolation Functions for a Tetrahedral Element / 45             |           |
| 2.3.2    | Tetrahedral Element for Three-Dimensional Elasticity / 49          |           |
| 2.4      | Mapped Solid Elements / 57   |           |
| 2.4.1    | Interpolation Functions for an Eight-Node Solid Element / 58       |           |
| 2.4.2    | Interpolation Functions for a 20-Node Solid Element / 59           |           |
| 2.4.3    | Evaluation of Derivatives / 60                                     |           |
| 2.4.4    | Integration over Volume / 61                                       |           |
| 2.4.5    | Evaluation of Surface Integrals / 63                               |           |
| 2.4.6    | Evaluation of Line Integrals / 67                                  |           |
| 2.4.7    | Complete <i>Mathematica</i> /MATLAB Implementations / 70           |           |
| 2.5      | Stress Calculations / 77   |           |
| 2.5.1    | Optimal Locations for Calculating Element Stresses / 77            |           |
| 2.5.2    | Interpolation-Extrapolation of Stresses / 78                       |           |
| 2.5.3    | Average Nodal Stresses / 79  |           |
| 2.5.4    | Iterative Improvement in Stresses / 82                             |           |
| 2.6      | Static Condensation / 84   |           |
| 2.7      | Substructuring / 85  |           |
| 2.8      | Patch Test and Incompatible Elements / 90                          |           |
| 2.8.1    | Convergence Requirements / 91                                      |           |
| 2.8.2    | Extra Zero-Energy Modes / 91                                       |           |
| 2.8.3    | Patch Test for Plane Elasticity Problems / 92                      |           |
| 2.8.4    | Quadrilateral Element with Additional Bending Shape Functions / 98 |           |
| 2.9      | Computer Implementation: fe2Quad / 102                             |           |
|          | Problems / 115   |           |

|   |            |
|---|------------|
| <b>3 SOLIDS OF REVOLUTION</b>   | <b>120</b> |
| 3.1 Equations of Elasticity in Cylindrical Coordinates / 120                        |            |
| 3.2 Axisymmetric Analysis / 122   |            |
| 3.2.1 Potential Energy / 123  |            |
| 3.2.2 Finite Element Equations / 123  |            |
| 3.2.3 Three-Node Triangular Element / 125   |            |
| 3.2.4 Mapped Quadrilateral Elements / 146   |            |
| 3.3 Unsymmetrical Loading / 154   |            |
| 3.3.1 Fourier Series Representation of Loading / 154                                |            |
| 3.3.2 Finite Element Formulation for Symmetric Loading Terms / 157                  |            |
| 3.3.3 Finite Element Formulation for Antisymmetric Loading Terms / 161              |            |
| Problems / 166  |            |
| <b>4 MULTIFIELD FORMULATIONS FOR BEAM ELEMENTS</b>                                  | <b>170</b> |
| 4.1 Euler-Bernoulli Beam Theory / 171   |            |
| 4.2 Mixed Beam Element Based on EBT / 173   |            |
| 4.3 Timoshenko Beam Theory / 180  |            |
| 4.4 Displacement-Based Beam Element for TBT / 183                                   |            |
| 4.5 Shear Locking in Displacement-Based Beam Elements for TBT / 189                 |            |
| 4.5.1 Possible Remedies for Shear Locking / 190                                     |            |
| 4.6 Mixed Beam Element Based on TBT / 193   |            |
| 4.7 Four-Field Beam Element for TBT / 198   |            |
| 4.8 Linked Interpolation Beam Element for TBT / 205                                 |            |
| 4.9 Concluding Remarks / 211  |            |
| Problems / 212  |            |
| <b>5 MULTIFIELD FORMULATIONS FOR ANALYSIS<br/>OF ELASTIC SOLIDS</b>                 | <b>215</b> |
| 5.1 Governing Equations / 215   |            |
| 5.2 Displacement Formulation / 218  |            |
| 5.3 Stress Formulation / 221  |            |
| 5.4 Mixed Formulation / 224   |            |
| 5.5 Assumed Stress Field For Mixed Formulation / 228                                |            |
| 5.5.1 Minimum Number of Stress Parameters / 228                                     |            |
| 5.5.2 Optimum Number of Stress Parameters / 229                                     |            |
| 5.5.3 Suggested Procedure for Determining Appropriate<br>Stress Interpolation / 230 |            |
| 5.6 Analysis of Nearly Incompressible Solids / 234                                  |            |
| 5.6.1 Deviatoric and Volumetric Stresses and Strains / 236                          |            |
| 5.6.2 Poisson Ratio Locking in the Displacement-Based Finite<br>Elements / 238      |            |

|          |   |            |
|----------|---|------------|
| 5.6.3    | Mixed Formulation for Nearly Incompressible Solids / 240                      |            |
| 5.6.4    | Finite Element Equations / 242  |            |
| 5.6.5    | Assumed Pressure Solution / 245   |            |
| 5.6.6    | Quadrilateral Elements for Planar Problems / 246                              |            |
|          | Problems / 258  |            |
| <b>6</b> | <b>PLATES AND SHELLS</b>  | <b>261</b> |
| 6.1      | Kirchhoff Plate Theory / 262  |            |
| 6.1.1    | Equilibrium Equations / 266   |            |
| 6.1.2    | Stress Computations / 267   |            |
| 6.1.3    | Weak Form for Displacement-Based Formulation / 270                            |            |
| 6.1.4    | General Form of Kirchhoff Plate Element Equations / 273                       |            |
| 6.2      | Rectangular Kirchhoff Plate Elements / 275                                    |            |
| 6.2.1    | MZC (Melosh, Zienkiewicz, and Cheung) Rectangular Plate Element / 275         |            |
| 6.2.2    | Patch Test for Plate Elements / 284   |            |
| 6.2.3    | BFS (Bogner, Fox, and Schmit) Rectangular Plate Element / 291                 |            |
| 6.3      | Triangular Kirchhoff Plate Elements / 299                                     |            |
| 6.3.1    | BCIZ (Bazeley, Cheung, Irons, and Zienkiewicz) Triangular Plate Element / 299 |            |
| 6.3.2    | Conforming Triangular Plate Elements / 305                                    |            |
| 6.4      | Mixed Formulation for Kirchhoff Plates / 307                                  |            |
| 6.5      | Mindlin Plate Theory / 311  |            |
| 6.6      | Displacement-Based Finite Elements for Mindlin Plates / 314                   |            |
| 6.6.1    | Weak Form / 314   |            |
| 6.6.2    | General Form of Mindlin Plate Element Equations / 316                         |            |
| 6.6.3    | Heterosis Element / 323   |            |
| 6.7      | Multifield Elements for Mindlin Plates / 325                                  |            |
| 6.8      | Analysis of Shell Structures / 331  |            |
| 6.8.1    | Transformation Matrix / 332   |            |
| 6.8.2    | Transformed Equations / 335   |            |
|          | Problems / 336  |            |
| <b>7</b> | <b>INTRODUCTION TO NONLINEAR PROBLEMS</b>                                     | <b>340</b> |
| 7.1      | Nonlinear Differential Equation / 341   |            |
| 7.1.1    | Approximate Solutions Using the Classical Form of the Galerkin Method / 341   |            |
| 7.1.2    | Finite Element Solution / 344   |            |
| 7.2      | Solution Procedures for Nonlinear Problems / 353                              |            |
| 7.2.1    | Constant Stiffness Iteration / 354  |            |

|          |  |            |
|----------|--|------------|
| 7.2.2    | Load Increments / 359  |            |
| 7.2.3    | Arc-Length Method / 365  |            |
| 7.3      | Linearization and Directional Derivative / 379   |            |
| 7.3.1    | Examples of Linearization / 380  |            |
|          | Problems / 383   |            |
| <b>8</b> | <b>MATERIAL NONLINEARITY</b>   | <b>386</b> |
| 8.1      | Analysis of Axially Loaded Bars / 387  |            |
| 8.1.1    | Weak Form / 388  |            |
| 8.1.2    | Two-Node Finite Element / 389  |            |
| 8.1.3    | One-Dimensional Plasticity / 391   |            |
| 8.1.4    | Ramberg-Osgood Model / 414   |            |
| 8.2      | Nonlinear Analysis of Trusses / 424  |            |
| 8.3      | Material Nonlinearity in General Solids / 434  |            |
| 8.3.1    | General Form of Finite Element Equations / 434   |            |
| 8.3.2    | General Formulation for Incremental Stress-Strain Equations / 437                              |            |
| 8.3.3    | State Determination Procedure / 440  |            |
| 8.3.4    | von Mises Yield Criterion and the Associated Hardening Models / 449                            |            |
|          | Problems / 462   |            |
| <b>9</b> | <b>GEOMETRIC NONLINEARITY</b>  | <b>466</b> |
| 9.1      | Basic Continuum Mechanics Concepts / 467   |            |
| 9.1.1    | Deformation Gradient / 467   |            |
| 9.1.2    | Green-Lagrange Strains / 476   |            |
| 9.1.3    | Cauchy and Piola-Kirchhoff Stresses / 481  |            |
| 9.2      | Governing Differential Equations and Weak Forms / 482  |            |
| 9.3      | Linearization of the Weak Form / 488   |            |
| 9.4      | General Form of Element Tangent Matrices / 493   |            |
| 9.4.1    | State Determination and Check for Convergence / 496  |            |
| 9.5      | Constitutive Equations / 498   |            |
| 9.5.1    | Kirchhoff Material / 498   |            |
| 9.5.2    | Compressible Neo-Hookean Material / 499  |            |
| 9.6      | Computations For a Planar Analysis / 509   |            |
| 9.7      | Deformation-Dependent Loading / 529  |            |
| 9.7.1    | Linearized External Virtual Work for Pressure Loading:<br>General Three-Dimensional Case / 529 |            |
| 9.7.2    | Linearized External Virtual Work for Pressure Loading: Planar<br>Case / 534                    |            |
| 9.8      | Linearized Buckling Analysis / 536   |            |
| 9.8.1    | Buckling Load for Trusses / 537  |            |

|           |  |
|-----------|--|
| 9.9       | Appendix: Double Contraction of Tensors / 542                                |
| 9.9.1     | Double Contraction of Two Second-Order Tensors / 542                         |
| 9.9.2     | Double Contraction of a Fourth-Order Tensor with a Second-Order Tensor / 543 |
|           | Problems / 545   |
| <b>10</b> | <b>CONTACT PROBLEMS</b>  |
|           | <b>549</b>   |
| 10.1      | Simple Normal Contact Example / 549  |
| 10.1.1    | Direct Solution / 549  |
| 10.1.2    | Solution Using Normal Contact Constraint / 551                               |
| 10.2      | Contact Example Involving Friction / 554                                     |
| 10.2.1    | Solution of a Beam Problem with No Frictional Resistance / 555               |
| 10.2.2    | Frictional Constraint Function / 555   |
| 10.2.3    | Solution of a Beam Problem with Large Frictional Resistance / 556            |
| 10.2.4    | Solution of a Beam Problem with Small Frictional Resistance / 557            |
| 10.3      | General Contact Problems / 557   |
| 10.3.1    | Contact Point and Gap Calculations / 558                                     |
| 10.3.2    | Forces on the Contact Surface / 564  |
| 10.3.3    | Lagrange Multiplier Weak Form / 565  |
| 10.3.4    | Penalty Formulation / 568  |
|           | Problems / 575   |
