CONTENTS

Preface v

1 Digital Geometry 1

1.1 Introduction 1
1.2 Digitization 3
1.3 Topology 4
1.4 Distance and Size 6
1.5 Convexity and Elongatedness 6
1.6 Three Dimensions 7
1.7 Other Grids 7
1.8 Gray Levels 8
1.9 Concluding Remarks 8
1.10 Bibliography 9

2 Topological Projection of Planar Discrete Patterns 55

2.1 Introduction 56
2.2 Patterns and Connectivity 58
2.2.1 Patterns and Operations 58
2.2.2 Connectivity and Neighborhood 61
2.3 Topological Equivalence of Binary Patterns 65
2.3.1 Topology and Connectivity 65
2.3.2 Topology of Gray-Scale Patterns 68
2.3.3 Topological Equivalence of Planar Patterns 71
2.4 Enumeration of the Number of Holes 72
2.4.1 Topological Projection of Planar Patterns 72
2.4.2 Convex Closure and Holes 76
2.5 Convex Closure and Genuses of Spatial Patterns 79
2.6 Conclusions 83
2.7 Bibliography 84

3 Discrete Integral Geometry and Stochastic Images 87

3.1 Discrete Objects 87
3.1.1 Incidence Structures 87
3.1.2 Homogeneous Incidence Structures 89

3.1.3 Z^n as Incidence Structure 90
3.1.4 Objects in Z^n 91
3.1.5 Similarity of Objects 94
3.2 Discrete Integral Geometry 96
3.2.1 Motions of Objects in Z^n 96
3.2.2 Count Measures and Intersections of Objects 97
3.2.3 Applications of the Intersection Formula 99
3.2.4 Count Formulas 102
3.3 Stochastic Images 105
3.3.1 Expectation Values 105
3.4 Bibliography 110

4 On Approximation of Planar One-Dimensional Continua 113

4.1 Introduction 113
4.2 The Jordan Content and Grid Topology 117
4.3 Intrinsic Geometry: Basic Notions 119
4.4 Method of Shrinking 128
4.5 Method of Expanding 133
4.6 Implicit Forms and Characteristic Sets 141
4.7 Computational Geometry: Algorithms 144
4.8 Examples 152
4.9 Conclusion 154
4.10 Bibliography 158

5 Approximation and Representation of 3D Objects 161

5.1 Introduction 161
5.1.1 Soundness Properties 162
5.1.2 Jordan Faces 164
5.1.3 Jordan Surfaces 167
5.2 Object Digitization 168
5.2.1 Orthogonal Grids at Different Resolutions 168
5.2.2 Digitization Schemes 170
5.3 Convergence Analysis 175
5.3.1 Volume and Surface Area Calculation 176
5.3.2 Approximation of Planes 179
5.3.3 Integration of Jordan Face Gradients 183
5.3.4 Solution of a Cauchy Problem 186
5.4 Conclusions 190
5.5 Bibliography 191

6 Digitization Models to Discrete Shape Constraints 195

6.1 Introduction 195
6.2 Digital Representations 197

6.3 Relation between Continuous and Digital Shape Features 198
6.4 Continuous Representations of Real Objects 200
6.5 Digitization and Segmentation 205
6.6 Topology Preservation 207
6.7 Digitizations Produce Well-Composed Images 210
6.8 Spatial Reasoning with Digital Representations 213
6.9 An Optimal Threshold for Gray-Level Document Images 216
6.9.1 Well-Composedness of Document Images 218
6.9.2 Weak Connectivity 219
6.10 Bibliography 224

7 Performance Analysis of Voronoi Algorithms 227

7.1 Introduction 227
7.2 The Voronoi Tessellation 228
7.2.1 Basic Notions 228
7.2.2 A Divide and Conquer Algorithm 229
7.2.3 Distance Functions 229
7.2.4 Approximations of the Euclidean Distance 232
7.2.5 Implementation of the Region Growing Method 233
7.2.6 The 3-Dimensional Voronoi Tessellation 235
7.3 Performance Analysis 237
7.3.1 Statistical Analysis 238
7.3.2 Cumulative Distribution Functions in the 2-D Case 241
7.3.3 Cumulative Distribution Functions in the 3-D Case 245
7.4 Parallel Implementation 249
7.4.1 Parallel 2-D Algorithm 249
7.4.2 Performance Measurements 251
7.4.3 Parallelization of the 3-D Voronoi Tessellation Algorithm 252
7.5 Conclusions 252
7.6 Bibliography 253

8 On Digital Convex Polygons 255

8.1 Introduction 255
8.2 Basic Notions 256
8.3 On Optimal Polygons P_n 260
8.3.1 Limit Properties of $m(n)$ 263
8.3.2 Related Results and Comments 264
8.4 On Optimal Polygons J_n 265
8.4.1 Limit Properties of $p(n)$ 267
8.4.2 Related Results and Comments 268
8.5 Limit Shapes of P_n and J_n 269
8.5.1 Limit Shape of P_n 270
8.5.2 Limit Shape of J_n 274
8.6 Relations between P_n and J_n 278

8.7 Conclusion 281
8.8 Bibliography 282

9 Deformation of Discrete Surfaces 285

9.1 Introduction 285
9.2 Discrete Combinatorial Topology 287
9.2.1 Unit Discrete Polyhedra 288
9.2.2 Polyhedral Discrete Complex 291
9.2.3 Simplicial Discrete Complex 293
9.3 Combinatorial Representation of Discrete Objects 294
9.3.1 Polyhedral Representation 294
9.3.2 Simplicial Representation 295
9.4 Construction of Discrete Object Surfaces 295
9.4.1 First Stage: Polyhedral Decomposition of Lattice Points . 296
9.4.2 Second Stage: Object Separation by Connectivity 299
9.4.3 Third Stage: Surface Extraction from Discrete Objects . . 300
9.5 Algorithm of Discrete Closed Surface Construction 300
9.6 Topology of Points 304
9.7 Deformation and Topology 305
9.7.1 Polyhedral Deformation 306
9.7.2 Simplicial Deformation 306
9.7.3 Elementary Deformation Operations 308
9.7.4 Topology Preservation and Deformation 309
9.7.5 Deformation Algorithm 310
9.8 Conclusions 314
9.9 Bibliography 315

10 On Symmetry in Digital Geometry 317

10.1 Introduction 317
10.2 Transformations in the Continuous Plane 319
10.2.1 Symmetries 320
10.3 The Classical Symmetry Groups for Digital Geometry 322
10.4 A Digital Approach to Reflection 326
10.5 Arithmetic Representation of Lines 326
10.6 Construction of Arithmetic Reflections 327
10.7 Properties of Arithmetic Reflections 331
10.8 Examples 333
10.9 Alternative Constructions 335
10.10 Digital Symmetries 336
10.10.1 Digital Symmetry Groups 337
10.11 Conclusions 338
10.12 Bibliography 338

11 Computational Geometry **341**

11.1 About this Bibliography 341
11.2 Concluding Remark 342
11.3 Bibliography 342
11.3.1 General References 342
11.3.2 Matching 343
11.3.3 Range Searching 343
11.3.4 Point Location 344
11.3.5 Enclosure and Separation 344
11.3.6 Intersection 345
11.3.7 Rays and Lines 346
11.3.8 Polygons 347
11.3.9 Packing and Covering 348
11.3.10 Arrangements and Partitions 348
11.3.11 Triangulations and Subdivisions 349
11.3.12 Distance and Proximity 351
11.3.13 Voronoi Diagrams, Delaunay Triangulations 353
11.3.14 Centers 354
11.3.15 Convexity and Hulls 354
11.3.16 Visibility 355
11.3.17 Paths and Networks 357
11.3.18 Moving Objects and Motion Planning 359
11.3.19 Reconstruction and Shape Approximation 361
11.3.20 Robust Computation 361
11.3.21 Randomization and Sampling 362
11.3.22 Software 362
11.3.23 Miscellaneous 363
