Advising on Research Methods: A consultant's companion

Herman J. Adèr Gideon J. Mellenbergh with contributions by David J. Hand

Contents

Preface

13

Ι	Preliminaries	
1	Giving advice on research methods	
	(by David J. Hand)	
	1.1 The consulting environment	
	1.2 Communication	
	1.3 Problem formulation	
	1.4 The consultant's tools	
	1.5 Training consultants	
	1.6 Conclusion	
	1.7 Further reading	
2	Methodological consultancy problems	
	(by Gideon J. Mellenbergh)	•
	2.1 Design questions	•
	2.2 Questions on measurement instruments	•
	2.3 Data analysis questions	
	2.4 Questions concerning reporting	
3	Methodological quality	
	(by Herman J. Adèr)	
	3.1 Research question and research plan	
	3.1.1 Literature assessment by systematic reviewing	
	3.2 Study design	
	3.2.1 Quality of the measurement instruments	,

× . . .

3.3 Implementation and data collection	58
3.3.1 Data collection and data quality	59
3.3.2 Distributed data collection	59
3.4 Data quality	60
3.5 Data quality and data analysis	61
3.5.1 Data quality and consultation	63
$3.5.2$ Data quality in data mining \ldots \ldots \ldots \ldots	64
3.6 The interpretation of the analysis results	65
3.7 Methodological Quality in practical	
$\operatorname{consultation}$	66
3.8 Further reading	67
Exercises	70
4 Discomination and publishing	71
(by David I Hand)	71
Further reading	77
Topics for classroom discussion	78
	10
II Sampling and Design	81
5 Sampling	83
(by David J. Hand)	83
5.1 Background fundamentals	87
5.2 Sampling methods	89
5.3 Simple random sampling	91
5.4 Stratified sampling	94
5.5 Cluster sampling	97
5.6 Choice of sampling frame	99
5.7 Other issues \ldots	101
5.8 Further reading	104
Exercises	104
6 General issues of research design	107
(by Gideon J. Mellenbergh)	107
6.1 Scientific problems	108
6.2 Constraints	110
6.3 Elements of the systematic plan	111
6.3.1 Units	111
	111

6.3.3 Measurement occasions	114
6.3.4 Precision	119
6.3.5 Generalization	121
6.4 Typical topics for consultation	125
Exercises	126
7 Research designs: Description, exploration, prediction	129
(by Gideon J. Mellenbergh)	129
7.1 State description	130
7.2 Process description	132
7.3 State exploration	134
7.4 Process exploration	135
7.5 State prediction	136
7.6 Process prediction	140
Exercises	142
8 Research designs: Testing of research hypotheses	143
(by Gideon J. Mellenbergh)	143
8.1 State hypothesis-testing problems	143
8.1.1 Independent variable types	144
8.1.2 Design types	146
8.1.3 Data collection for hypothesis-testing designs \ldots	148
8.1.4 Multiple substantive independent variables	149
8.1.5 Background variables	151
8.1.6 Null hypothesis testing	154
8.1.7 Alternative explanations	156
8.1.8 Prevention of alternative explanations	
in experimental designs	157
8.1.9 Prevention of alternative explanations	
in quasi-experimental designs	164
8.1.10 Prevention of alternative explanations	1 20
in correlational designs	170
8.1.11 Combining quantitative and qualitative studies for	170
causal interpretations	172
8.1.12 Giving advice on State hypothesis-testing problems	173
8.2 Process hypothesis-testing problems	175
8.2.1 Discussion topics	170
(Process nypotnesis-testing problems)	170
o.a ruruler leading	170
	179

III Measurement

(by Gideon J. 10 Tests and questionnaires: Construction and administration 211 (by Gideon I. Mellenbergh) 211
Construction and administration211(by Gideon I. Mellenbergh)211
(by Cideon I Mellenbergh) 211
10.1 Blueprint
10.1.1 Construct Method
10.1.2 Facet Design Method
10.2 Item production
$10.2.1$ Test items $\ldots \ldots 217$
10.2.2 Questionnaire items
10.3 Pilot studies
10.4 First draft of the instrument $\ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots 231$
$10.4.1$ Test assembly $\ldots \ldots 232$
10.4.2 Questionnaire assembly
10.5 Administration modes
10.6 Try-out
Exercises

CONTENTS

11 Tests and questionnaires: Analysis	235
(by Gideon J. Mellenbergh)	235
11.1 Data processing	236
11.2 Observed score analysis	237
11.2.1 Classical observed score analysis	237
11.2.2 Classical item analysis	241
11.3 Item response analysis	243
11.3.1 Linear item response functions	245
11.3.2 Logistic item response functions	250
11.3.3 Monotonically nondecreasing item response functions	s 255
11.4 Measurement invariance	258
11.5 Validation	259
11.6 Compound scores	261
11.6.1 The gain score	261
11.6.2 The product score	264
11.7 Consultation topics	264
11.8 Software	266
Exercises	267

IV Data analysis: Basics

12 Modelling	271
(by Herman J. Adèr) \ldots	271
12.1 Hypothesis testing, estimation, prediction and modelling .	273
12.1.1 Statistical hypothesis testing	273
12.1.2 Estimation	275
12.1.3 Prediction	277
12.1.4 Modelling	279
12.2 Statistical modelling	280
12.3 Methodological modelling	282
12.4 Justification versus discovery	283
12.4.1 Modelling in the context of justification	283
12.4.2 Modelling in the context of discovery	286
12.4.3 Methodological modelling and the contexts of justi-	
fication and discovery	288
12.5 Fitting	289
12.6 Stepwise approaches	290
$12.6.1$ User control \ldots	292
12.7 Model search	293

269
