ALGORITHMS FOR MINIMIZATION WITHOUT DERIVATIVES

RICHARD P. BRENT

Abstract

This monograph describes and analyzes some practical methods for finding approximate zeros and minima of functions. Contents include:

1. The use of successive interpolation for finding simple zeros of a function and its derivatives.
2. An algorithm with guaranteed convergence for finding a zero of a function.
3. An algorithm with guaranteed convergence for finding a minimum of a function of one variable.
4. Global minimization given an upper bound on the second derivative.
5. A new algorithm for minimizing a function of several variables without calculating derivatives.
6. Computer programs which implement these algorithms.

Comments

Only the Abstract is given here. The full work appeared as [4]. A preliminary version appeared as [2]. For related work, see [1, 3].
