In the statistics section, the equation to generate a final prediction model from the training set was incorrect. The correct sentence is below.

We then created a training set at random and repeated the entire process to generate a final model: $\log[-\log(1 - \hat{p})] = -11.263 + 1.844(\log_{10}\text{ST2}) + 0.577(\log_{10}\text{REG3}\alpha)$, where \hat{p} = predicted probability of 6-month NRM.

The authors regret the error.
