Introduction, 1

1 Natural Selection, Ecology and Behaviour, 4

- Questions about behaviour, 4
 - Reproductive behaviour in lions, 5
- Natural selection, 8
- Genes and behaviour, 10
 - (a) Use of genetic mutants, 10
 - (b) Artificial selection experiments, 11
 - (c) Studying populations with genetic differences, 11
- Selfish individuals or group advantage?, 14
 - Theoretical objections, 15
 - Empirical studies, 16
- Behaviour, ecology and evolution, 21
- Summary, 22
- Further reading, 22
- Topics for discussion, 23

2 Testing Hypotheses in Behavioural Ecology, 24

- The comparative approach, 25
 - Social organization in weaver birds, 25
 - Social organization in African ungulates, 28
- Adaptation or story-telling?, 29
 - Alternative hypotheses, 29
 - Cause and effect, 29
 - Confounding variables, 30
 - Alternative adaptive peaks or non-adaptive differences, 30
- Primate social organization, 31
 - Home range size, 35
 - Sexual dimorphism in body weight, 37
 - Sexual dimorphism in tooth size, 38
 - Testis size and breeding system, 40
- The comparative approach reviewed, 41
- Experimental studies of adaptation, 42
 - Optimality models, 44
- Gathering food, 44
 - Crows and whelks, 44
- Summary, 45
- Further reading, 47
- Topics for discussion, 47

3 Economic Decisions and the Individual, 48

- The economics of carrying a load, 48
 - Starlings, 48
 - Bees, 53

- The economics of prey choice, 59
 - Sampling and information, 62
 - The risk of starvation, 63
 - Variability in searching or handling time, 64
 - Environmental variability, body reserves and food-storing, 65
 - Feeding and danger: a trade-off, 66
 - Nutrient constraints: herbivores and plants, 70
 - Optimality models and behaviour: an overview, 73
 - Summary, 74
 - Further reading, 76
 - Topics for discussion, 76
- 4 Predators versus Prey: Evolutionary Arms Races, 77**
- Predators versus cryptic prey, 79
 - Testing functional hypotheses about adaptation, 79
 - Does even crude crypsis confer an advantage?, 84
 - The advantage and evolution of warning coloration, 86
 - Evolution of warning coloration, 88
 - The trade-off between conspicuousness and crypsis, 90
 - Predator-prey arms races, 92
 - Brood parasites and their hosts, 93
 - Cuckoos versus hosts, 93
 - Evolutionary equilibrium or continuing arms race?, 96
 - (a) Continuing arms race, 96
 - (b) Evolutionary equilibrium, 98
 - Conclusion, 99
 - Summary, 100
 - Further reading, 100
 - Topics for discussion, 101
- 5 Competing for Resources, 102**
- Competition by exploitation: the ideal free distribution, 102
 - Competition by resource defence: the despotic distribution, 105
 - The ideal free distribution with unequal competitors, 106
 - The economics of resource defence, 110
 - (a) Economic defendability, 110
 - (b) Optimal territory size, 113
 - (c) Graphical models of optimal territory size: a caveat, 114
 - Shared resource defence, 114
 - Interspecific territoriality, 117
 - Summary, 118
 - Further reading, 118
 - Topics for discussion, 119
- 6 Living in Groups, 120**
- Living in groups and avoiding predation, 120
 - Increased vigilance, 120
 - Dilution and cover, 123
 - Group defence, 126
 - Costs of being in a group, 126
 - Living in groups and getting food, 126

- Finding good sites, 126
 - Catching difficult prey, 130
 - Harvesting renewing food, 130
 - Costs associated with feeding, 131
 - Weighing up costs and benefits – optimal group size, 133
 - Comparative studies, 134
 - Coloniality in cliff swallows: a case study, 135
 - Time budgets, 138
 - Are groups of optimal size stable?, 143
 - Individual differences in a group, 144
 - Evolution of group living: schooling in guppies, 144
 - Summary, 146
 - Further reading, 146
 - Topics for discussion, 146
- 7 Fighting and Assessment, 147**
- The war of attrition, or 'the waiting game', 147
 - (a) The problem, 147
 - (b) The theory, 148
 - (c) Testing the theory, 150
 - The evolution of conventional fighting, 150
 - Hawks and Doves, 151
 - Hawk, Dove and Bourgeois, 154
 - Simple models and reality, 155
 - Examples of animal contests, 156
 - (a) Serious fights, 156
 - (b) Respect for ownership, 157
 - (c) The influence of resource value, 159
 - (d) Contests of strength, 160
 - Sequential assessment, 164
 - Contests with differences in both resource value and fighting ability, 164
 - Theory: the asymmetric war of attrition, 165
 - Data: contests between male spiders, 167
 - (a) Measuring resource value, V , 167
 - (b) Measuring the costs of a fight, K , 168
 - (c) Results of staged encounters, 168
 - Badges of status, 171
 - Summary, 173
 - Further reading, 173
 - Topics for discussion, 174
- 8 Sexual Conflict and Sexual Selection, 175**
- Males and females, 175
 - Females as a scarce resource, 176
 - The sex ratio, 177
 - (a) Local mate competition, 180
 - (b) Local resource competition or enhancement, 181
 - (c) Maternal condition, 181
 - (d) Population sex ratio, 182
 - Sexual selection, 183

- Ardent males, 183
- Reluctant females, 186
 - (a) Non-genetic benefits: good resources and parental ability, 187
 - (b) Genetic benefits, 188
- Elaborate ornaments: Fisher's hypothesis and the handicap hypothesis, 190
 - (a) Examples of female preference for elaborate male displays, 190
 - (b) Fisher's hypothesis, 192
 - (c) The handicap hypothesis, 194
 - (d) Evidence for the Fisher and handicap hypotheses, 196
- Male investment, 197
- Sexual conflict, 202
 - (a) Mating decisions, 202
 - (b) Parental investment, 204
 - (c) Infanticide, 204
 - (d) Multiple matings, 204
- The significance of courtship, 205
- Summary, 206
- Further reading, 206
- Topics for discussion, 207

9 Parental Care and Mating Systems, 208

- Proximate constraints on parental care, 209
 - Birds, 209
 - Mammals, 210
 - Fish, 210
 - Hypothesis 1. Paternity certainty, 211
 - Hypothesis 2. Order of gamete release, 211
 - Hypothesis 3. Association, 212
 - Ancestral origin of uniparental care, 212
- An ESS model of parental investment, 213
- Mating systems with no male parental care, 214
 - (a) Grey-sided voles, *Clethrionomys rufocanus*, 215
 - (b) Blue-headed wrasse, *Thalassoma bifasciatum*, 216
- Variation in mating systems, 216
 - A comparative survey of mammalian mating systems, 217
 - (a) Daily female movements predictable, 219
 - (b) Daily female movements not predictable, 219
 - Leks and choruses, 220
- Mating systems with male parental care, 225
 - Monogamy, 225
 - Extra-pair matings and intra-specific brood parasitism, 226
 - Polygyny, 230
 - (a) No cost of polygyny to females, 231
 - (b) Cost of polygyny to females, 232
 - Sexual conflict and polygamy, 234
 - The pied flycatcher, *Ficedula hypoleuca*, 235
 - The dunnock, *Prunella modularis*, 237
 - Female desertion and sex role reversal, 238
- Ecology and dispersal, 239
 - Consequences of sex differences in dispersal, 241

Conclusion, 241
 Summary, 242
 Further reading, 243
 Topics for discussion, 243

10 **Alternative Breeding Strategies, 244**

Hypotheses for the occurrence of alternative strategies within a species, 244
 Changing environment, 245
 Making the best of a bad job, 246
 Alternative strategies in evolutionary equilibrium, 249
 (a) Salmon: hooknoses and jacks, 249
 (b) Figwasps: fighters and dispersers, 252
 (c) Nesting strategies in female digger wasps: diggers and enterers, 254
 Problems of measuring costs and benefits of alternative strategies, 256
 Sex change as an alternative strategy, 260
 Changing from female to male, 260
 Changing from male to female, 262
 Sex change versus sneaking, 263
 Summary, 263
 Further reading, 264
 Topics for discussion, 264

11 **On Selfishness and Altruism, 265**

Kin selection, 265
 Examples of altruism between relatives, 269
 (a) Co-operation and alarm calls in ground squirrels and prairie dogs, 269
 (b) Wife sharing in the Tasmanian native hen, 272
 How do individuals recognize kin?, 275
 Conclusions about kin selection, 277
 Mutualism, 278
 Manipulation, 279
 Reciprocity, 280
 The Prisoner's dilemma, 280
 Predictions of the model, 283
 Examples of reciprocity, 285
 (a) Spawning in the black hamlet fish, 285
 (b) Regurgitation of blood by vampire bats, 285
 (c) Alliances in primates, 287
 Summary, 289
 Further reading, 290
 Topics for discussion, 290

12 **Co-operation and Helping in Birds, Mammals and Fish, 291**

Genetic predispositions and ecological constraints, 291
 An example of helping in birds – the Florida scrub jay, 293
 (a) Breeders benefit from the presence of helpers, 294
 (b) Habitat saturation is an ecological constraint, 295

- (c) Males benefit by inheriting a breeding space, 296
- The scrub jay pattern in other species, 299
 - Do helpers really help? Experimental evidence, 302
 - Experimental evidence for breeding constraints, 302
- Helpers are not always relatives, 304
 - (a) The dwarf mongoose: unrelated helpers and pseudopregnancies, 304
 - (b) Anemone fish, 305
 - (c) Pied kingfisher: primary and secondary helpers, 306
- An alternative hypothesis for the evolution of helping, 308
- Conflict in breeding groups, 310
 - (a) Groove-billed anis, 311
 - (b) Acorn woodpeckers, 312
- Division of labour and specialized helpers, 314
- Conclusions, 315
- Summary, 316
- Further reading, 316
- Topics for discussion, 317

13 Altruism in the Social Insects, 318

- The social insects, 318
 - The problem, 318
 - The definition of 'social insect', 318
- The life cycle and natural history of a social insect, 320
- How eusociality evolved: two pathways, 322
 - Hypothesis 1. Staying at home to help, 322
 - (a) Ecological constraints, 322
 - (b) Genetic predispositions, 324
 - Hypothesis 2. Sharing a nest, 325
 - (a) Ecological constraints, 326
 - (b) Genetic predispositions, 326
- Haplodiploidy and altruism, 328
 - Conflict between workers and queen, 332
 - Conflict over the sex ratio, 332
 - Tests of worker-queen conflict, 334
- Haplodiploidy and the origin of eusociality, 338
- Parental manipulation or daughter advantage, 343
- The importance of demography, 344
- Comparison of vertebrates and insects, 344
- Summary, 347
- Further reading, 347
- Topics for discussion, 348

14 The Design of Signals: Ecology and Evolution, 349

- Ecological constraints and communication, 350
 - Communication in ants, 351
 - Bird and primate calls, 352
- Reactors and the design of signals, 358
 - How signals originate, 358
 - How signals are modified during evolution: ritualization, 361
 - Hypotheses for the evolution of signal design, 363

(a) Reduction of ambiguity, 363

(b) Manipulation, 365

(c) Honesty, 367

Evidence from present-day signals, 367

An example of bluff or manipulative signalling: mantis shrimps, 367

Honest signalling: Thompson's gazelles, 368

Receiver psychology: Tungara frogs and swordfish, 368

Variability of signals and information, 369

Signalling, manipulation, and the animal mind, 371

Summary, 373

Further reading, 374

Topics for discussion, 374

15 Conclusion, 375

How plausible are our main premises?, 375

Selfish genes, 375

Group selection, 376

Optimality models and ESSs, 378

Causal and functional explanations, 382

A final comment, 384

Summary, 386

Further reading, 386
