

# An Introduction to Chaos in Nonequilibrium Statistical Mechanics

J. R. DORFMAN

Institute for Physical Science and Technology  
and  
Department of Physics  
University of Maryland  
College Park, Maryland

**CAMBRIDGE**  
UNIVERSITY PRESS

# Contents

|          |  |                |
|----------|--|----------------|
|          | Preface  | <i>page xi</i> |
| <b>1</b> | <b>Nonequilibrium statistical mechanics</b>        | <b>1</b>       |
| 1.1      | Introduction                                       | 1              |
| 1.2      | The law of large numbers and the laws of mechanics | 1              |
| 1.3      | Boltzmann's ergodic hypothesis                     | 5              |
| 1.4      | Gibbs' mixing hypothesis                           | 9              |
| 1.5      | Irregular dynamical motions                        | 10             |
| 1.6      | Modern nonequilibrium statistical mechanics        | 11             |
| 1.7      | Outline of this book                               | 14             |
| 1.8      | Further reading                                    | 18             |
| <b>2</b> | <b>The Boltzmann equation</b>                      | <b>21</b>      |
| 2.1      | Heuristic derivation                               | 21             |
| 2.2      | Boltzmann's $H$ -theorem                           | 31             |
| 2.3      | Kac's ring model                                   | 34             |
| 2.4      | Tagged particle diffusion                          | 39             |
| 2.5      | Further reading                                    | 47             |
| 2.6      | Exercises  | 47             |
| <b>3</b> | <b>Liouville's equation</b>                        | <b>49</b>      |
| 3.1      | Derivation   | 49             |
| 3.2      | The BBGKY hierarchy equations                      | 51             |
| 3.3      | Poincaré recurrence theorem                        | 54             |
| 3.4      | Further reading                                    | 56             |
| 3.5      | Exercises  | 56             |
| <b>4</b> | <b>Boltzmann's ergodic hypothesis</b>              | <b>58</b>      |
| 4.1      | Introduction                                       | 58             |
| 4.2      | Equal times in regions of equal measure            | 59             |
| 4.3      | The individual ergodic theorem                     | 62             |
| 4.4      | Further reading                                    | 66             |
| 4.5      | Exercises  | 66             |

|           |   |            |
|-----------|---|------------|
| <b>5</b>  | <b>Gibbs' picture: mixing systems</b>                                 | <b>67</b>  |
| 5.1       | The definition of a mixing system                                     | 67         |
| 5.2       | Distribution functions for mixing systems                             | 70         |
| 5.3       | Chaos   | 71         |
| 5.4       | Further reading   | 74         |
| <b>6</b>  | <b>The Green–Kubo formulae</b>  | <b>75</b>  |
| 6.1       | Linear response theory  | 75         |
| 6.2       | van Kampen's objections   | 79         |
| 6.3       | The Green–Kubo formula: diffusion                                     | 83         |
| 6.4       | Further reading   | 87         |
| <b>7</b>  | <b>The baker's transformation</b>                                     | <b>89</b>  |
| 7.1       | The transformation and its properties                                 | 89         |
| 7.2       | A model Boltzmann equation  | 90         |
| 7.3       | Bernoulli sequences   | 94         |
| 7.4       | Further reading   | 97         |
| 7.5       | Exercises   | 97         |
| <b>8</b>  | <b>Lyapunov exponents, baker's map, and toral automorphisms</b>       | <b>100</b> |
| 8.1       | Definition of Lyapunov exponents                                      | 100        |
| 8.2       | The baker's transformation is ergodic                                 | 104        |
| 8.3       | The baker's transformation and irreversibility                        | 108        |
| 8.4       | The Arnold cat map  | 110        |
| 8.5       | Further reading   | 116        |
| 8.6       | Exercises   | 116        |
| <b>9</b>  | <b>Kolmogorov–Sinai entropy</b>                                       | <b>118</b> |
| 9.1       | Heuristic considerations  | 118        |
| 9.2       | The definition of the KS entropy                                      | 119        |
| 9.3       | Anosov and hyperbolic systems, Markov partitions, and Pesin's theorem | 122        |
| 9.4       | Further reading   | 127        |
| 9.5       | Exercises   | 127        |
| <b>10</b> | <b>The Frobenius–Perron equation</b>                                  | <b>129</b> |
| 10.1      | One-dimensional systems   | 130        |
| 10.2      | The Frobenius–Perron equation in higher dimensions                    | 133        |
| 10.3      | Further reading   | 135        |
| 10.4      | Exercises   | 135        |

|           |  |     |
|-----------|--|-----|
| <b>11</b> | <b>Open systems and escape rates</b>               | 136 |
| 11.1      | The escape-rate formalism                          | 136 |
| 11.2      | The Smale horseshoe                                | 142 |
| 11.3      | The box-counting dimension                         | 144 |
| 11.4      | The Lyapunov exponent for the repeller             | 147 |
| 11.5      | The escape-rate formula for hyperbolic systems     | 148 |
| 11.6      | Thermodynamic formalism for chaos                  | 149 |
| 11.7      | Further reading                                    | 150 |
| 11.8      | Exercises  | 151 |
| <b>12</b> | <b>Transport coefficients and chaos</b>            | 152 |
| 12.1      | The escape-rate formalism                          | 152 |
| 12.2      | Gaussian thermostats                               | 154 |
| 12.3      | Further reading                                    | 161 |
| <b>13</b> | <b>Sinai–Ruelle–Bowen (SRB) and Gibbs measures</b> | 163 |
| 13.1      | SRB measures                                       | 164 |
| 13.2      | The cumulative functions                           | 168 |
| 13.3      | The SRB theorem                                    | 176 |
| 13.4      | Entropy in terms of SRB measures                   | 178 |
| 13.5      | The Gallavotti–Cohen fluctuation formula           | 181 |
| 13.6      | Gibbs measures                                     | 183 |
| 13.7      | Further reading                                    | 193 |
| 13.8      | Exercises  | 194 |
| <b>14</b> | <b>Fractal forms in Green–Kubo relations</b>       | 195 |
| 14.1      | The Green–Kubo formula for maps                    | 195 |
| 14.2      | A simple map and a simple fractal                  | 197 |
| 14.3      | Further reading                                    | 202 |
| 14.4      | Exercises  | 202 |
| <b>15</b> | <b>Unstable periodic orbits</b>                    | 203 |
| 15.1      | Dense sets of unstable periodic orbits             | 203 |
| 15.2      | The topological zeta-function                      | 205 |
| 15.3      | Periodic orbits and diffusion                      | 207 |
| 15.4      | Escape-rates and periodic orbits                   | 208 |
| 15.5      | The generating function method for diffusion       | 211 |
| 15.6      | Periodic orbits and Gibbs measures                 | 214 |
| 15.7      | Further reading                                    | 216 |
| 15.8      | Exercises  | 216 |

|           |  |     |
|-----------|--|-----|
| <b>16</b> | <b>Lorentz lattice gases</b>                           | 217 |
| 16.1      | Cellular automata lattice gases                        | 217 |
| 16.2      | Chaotic behavior of Lorentz lattice gases              | 218 |
| 16.3      | The thermodynamic formalism                            | 222 |
| 16.4      | Further reading  | 225 |
| 16.5      | Exercises  | 226 |
| <b>17</b> | <b>Dynamical foundations of the Boltzmann equation</b> | 227 |
| 17.1      | The Arnold cat map                                     | 228 |
| 17.2      | The Boltzmann equation                                 | 232 |
| 17.3      | Stochastic equations                                   | 233 |
| 17.4      | The chaotic hypothesis                                 | 234 |
| 17.5      | The thermodynamic limit                                | 234 |
| 17.6      | Further reading  | 238 |
| <b>18</b> | <b>The Boltzmann equation returns</b>                  | 240 |
| 18.1      | The Lorentz gas as a billiard system                   | 240 |
| 18.2      | Sinai's formula  | 242 |
| 18.3      | The extended Lorentz–Boltzmann equation                | 246 |
| 18.4      | Semi-dispersing billiard systems                       | 251 |
| 18.5      | Summary  | 254 |
| 18.6      | Further reading  | 255 |
| 18.7      | Exercises  | 256 |
| <b>19</b> | <b>What's next ?</b>                                   | 257 |
| 19.1      | Billiard systems                                       | 257 |
| 19.2      | Model systems  | 258 |
| 19.3      | Ruelle–Pollicott resonances                            | 259 |
| 19.4      | Thermostatted systems                                  | 260 |
| 19.5      | Other approaches to transport                          | 260 |
| 19.6      | Further applications of mathematical ideas             | 261 |
|           | 19.6.1 <i>Differential geometry</i>                    | 261 |
|           | 19.6.2 <i>Random matrix theory</i>                     | 262 |
| 19.7      | Random perturbations                                   | 262 |
| 19.8      | Quantum systems  | 263 |
| 19.9      | Experimental studies                                   | 264 |
| 19.10     | Problems for the future                                | 265 |
|           | <i>Bibliography</i>                                    | 267 |
|           | <i>Index</i>   | 283 |
