
An Introduction to Dynamical Systems: Continuous and Discrete

R. Clark Robinson
Northwestern University

Upper Saddle River, New Jersey 07458

Contents

Preface	xi
Historical Prologue	1
PART 1. SYSTEMS OF NONLINEAR DIFFERENTIAL EQUATIONS	
Chapter 1. Geometric Approach to Differential Equations	7
Chapter 2. Linear Systems	13
2.1. Fundamental Set of Solutions	14
2.2. Constant Coefficients: Solutions and Phase Portraits	20
2.2.1. Complex Eigenvalues	27
2.2.2. Repeated Real Eigenvalues	34
2.2.3. Quasiperiodic Systems	40
2.3. Nonhomogeneous Systems: Time-Dependent Forcing	44
2.4. Applications	46
2.4.1. Mixing Fluids	46
2.4.2. Model for Malignant Tumors	49
2.4.3. Detection of Diabetes	50
2.4.4. Electric Circuits	50
2.5. Theory and Proofs	52
Exercises for Chapter 2	64
Chapter 3. The Flow: Solutions of Nonlinear Equations	67
3.1. Solutions of Nonlinear Equations	67
3.1.1. Solutions in Multiple Dimensions	71
3.2. Numerical Solutions of Differential Equations	74
3.2.1. Numerical Methods in Multiple Dimensions	80
3.3. Theory and Proofs	85
Exercises for Chapter 3	95

Chapter 4. Phase Portraits with Emphasis on Fixed Points	99
4.1. Stability of Fixed Points	99
4.2. One-Dimensional Differential Equations	104
4.3. Two Dimensions and Nullclines	109
4.4. Linearized Stability of Fixed Points	114
4.5. Competitive Populations	122
4.5.1. Three Competitive Populations	125
4.6. Applications	128
4.6.1. Chemostats	128
4.6.2. Epidemic Model	131
4.7. Theory and Proofs	133
Exercises for Chapter 4	140
Chapter 5. Phase Portraits Using Energy and Other Test Functions	147
5.1. Predator–Prey Systems	147
5.2. Undamped Forces	149
5.3. Lyapunov Functions for Damped Systems	159
5.4. Limit Sets	164
5.5. Gradient Systems	170
5.6. Applications	172
5.6.1. Nonlinear Oscillators	172
5.6.2. Neural Networks	174
5.7. Theory and Proofs	175
Exercises for Chapter 5	178
Chapter 6. Periodic Orbits	183
6.1. Definitions and Examples	184
6.2. Poincaré–Bendixson Theorem	188
6.2.1. Chemical Reaction Model	192
6.3. Self-Excited Oscillator	193
6.4. Andronov–Hopf Bifurcation	196
6.5. Homoclinic Bifurcation to a Periodic Orbit	203
6.6. Change of Area or Volume by the Flow	207
6.7. Stability of Periodic Orbits and the Poincaré Map	209
6.8. Applications	219
6.8.1. Chemical Oscillation	219
6.8.2. Nonlinear Electric Circuit	220
6.8.3. Predator–Prey System with an Andronov–Hopf Bifurcation	221
6.9. Theory and Proofs	224
Exercises for Chapter 6	236

Chapter 7. Chaotic Attractors	245
7.1. Attractors	245
7.2. Chaos	251
7.2.1. Sensitive Dependence	251
7.2.2. Chaotic Attractors	253
7.3. Lorenz System	256
7.3.1. Fixed Points for Lorenz Equations	256
7.3.2. Poincaré Map of Lorenz Equations	259
7.4. Rössler Attractor	265
7.4.1. Cantor Sets and Attractors	268
7.5. Forced Oscillator	268
7.6. Lyapunov Exponents	271
7.6.1. Numerical Calculation of Lyapunov Exponents	276
7.7. A Test for Chaotic Attractors	278
7.8. Applications	280
7.8.1. Lorenz System as a Model	280
7.9. Theory and Proofs	283
Exercises for Chapter 7	286
PART 2. ITERATION OF FUNCTIONS	
Chapter 8. Iteration of Functions as Dynamics	293
8.1. One-Dimensional Maps	293
8.2. Functions with Several Variables	298
Chapter 9. Periodic Points of One-Dimensional Maps	303
9.1. Periodic Points	303
9.2. Graphical Method of Iteration	311
9.3. Stability of Periodic Points	315
9.3.1. Newton Map	320
9.3.2. Fixed and Period-2 Points for the Logistic Family	323
9.4. Periodic Sinks and Schwarzian Derivative	328
9.5. Bifurcation of Periodic Points	332
9.5.1. The Bifurcation Diagram for the Logistic Family	337
9.6. Conjugacy	342
9.7. Applications	347
9.7.1. Capital Accumulation	347
9.7.2. Single Population Models	348
9.7.3. Blood Cell Population Model	350
9.8. Theory and Proofs	352
Exercises for Chapter 9	359
Chapter 10. Itineraries for One-Dimensional Maps	367
10.1. Periodic Points from Transition Graphs	367
10.1.1. Sharkovskii Theorem	373
10.2. Topological Transitivity	377

10.3. Sequences of Symbols	381
10.4. Sensitive Dependence on Initial Conditions	389
10.5. Cantor Sets	392
10.6. Subshifts: Piecewise Expanding Interval Maps	401
10.6.1. Counting Periodic Points for Subshifts of Finite Type	406
10.7. Applications	409
10.7.1. Newton Map: Nonconvergent Orbits	409
10.7.2. Complicated Dynamics for Population Growth Models	411
10.8. Theory and Proofs	412
Exercises for Chapter 10	420
Chapter 11. Invariant Sets for One-Dimensional Maps	427
11.1. Limit Sets	427
11.2. Chaotic Attractors	429
11.2.1. Chaotic Attractors for Expanding Maps with Discontinuities	434
11.3. Lyapunov Exponents	444
11.3.1. A Test for Chaotic Attractors	449
11.4. Measures	449
11.4.1. General Properties of Measures	450
11.4.2. Frequency Measures	452
11.4.3. Invariant Measures for Expanding Maps	460
11.5. Applications	467
11.5.1. Capital Accumulation	467
11.5.2. Chaotic Blood Cell Population	468
11.6. Theory and Proofs	468
Exercises for Chapter 11	471
Chapter 12. Periodic Points of Higher Dimensional Maps	475
12.1. Dynamics of Linear Maps	475
12.2. Stability and Classification of Periodic Points	487
12.3. Stable Manifolds	497
12.3.1. Numerical Calculation of the Stable Manifold	502
12.3.2. Basin Boundaries	503
12.3.3. Stable Manifolds in Higher Dimension	503
12.4. Hyperbolic Toral Automorphisms	505
12.5. Applications	509
12.5.1. Markov Chains	509
12.5.2. Newton Map in \mathbb{R}^n	514
12.5.3. Beetle Population Model	515
12.5.4. A Discrete Epidemic Model	518
12.5.5. One-Locus Genetic Model	519
12.6. Theory and Proofs	522
Exercises for Chapter 12	524

Chapter 13. Invariant Sets for Higher Dimensional Maps	527
13.1. Geometric Horseshoe	527
13.1.1. Basin Boundaries	537
13.2. Symbolic Dynamics	539
13.2.1. Correctly Aligned Rectangle	539
13.2.2. Markov Partition	547
13.2.3. Markov Partitions for Hyperbolic Toral Automorphisms	551
13.2.4. Shadowing	556
13.3. Homoclinic Points and Horseshoes	557
13.4. Attractors	560
13.4.1. Chaotic Attractors	565
13.5. Lyapunov Exponents for Maps in Higher Dimensions	567
13.5.1. Lyapunov Exponents from Axes of Ellipsoids	570
13.5.2. Numerical Calculation of Lyapunov Exponents	575
13.6. A Test for Chaotic Attractors	576
13.7. Applications	578
13.7.1. Stability of the Solar System	578
13.8. Theory and Proofs	579
Exercises for Chapter 13	582
Chapter 14. Fractals	589
14.1. Box Dimension	589
14.2. Dimensions of Orbits	599
14.2.1. Correlation Dimension	599
14.2.2. Lyapunov Dimension	600
14.3. Iterated-Function Systems	602
14.3.1. Iterated-Function Systems Acting on Sets	606
14.3.2. Probabilistic Action of Iterated-Function Systems	609
14.3.3. Determining the Iterated-Function System	611
14.4. Theory and Proofs	613
Exercises for Chapter 14	620
Appendix A. Calculus Background and Notation	625
Appendix B. Analysis and Topology Terminology	627
Appendix C. Matrix Algebra	633
Appendix D. Generic Properties	637
Bibliography	641
Index	647
