Contents

Introduction	1
1 Weak and weak* convergences in Banach spaces	9
1.1 Linear forms on Banach spaces	10
1.2 Weak convergence	12
1.3 Weak* convergence	16
1.4 Some properties of L^p -spaces	18
1.5 Weak convergence in L^p for $1 < p < \infty$	21
1.6 Weak convergence in L^1	22
1.7 Weak* convergence in L^∞	25
2 Rapidly oscillating periodic functions	26
2.1 Periodic functions in L^1	26
2.2 Examples	28
2.3 Weak limits of rapidly oscillating periodic functions	33
3 Some classes of Sobolev spaces	40
3.1 Distributions	40
3.2 The spaces $W^{1,p}$	43
3.3 The space H_0^1 and the notion of trace	48
3.4 The space H_{per}^1	56
3.5 Vector-valued spaces of the type $L^p(a, b; X)$	59
4 Some variational elliptic problems	64
4.1 Bilinear forms on Banach spaces	64
4.2 The Lax–Milgram theorem	65
4.3 Setting of the variational formulation	69
4.4 The Dirichlet problem	71
4.5 The Neumann problem	75
4.6 The Robin problem	78
4.7 Periodic boundary conditions	81
5 Examples of periodic composite materials	85
5.1 Setting of the problem	85
5.2 Some physical models	89
5.3 The one-dimensional case	95
5.4 Layered materials	98

6 Homogenization of elliptic equations: the convergence result	107
6.1 Auxiliary periodic problems	108
6.2 The main convergence result	112
6.3 The ellipticity of the homogenized matrix	115
6.4 Other formulas for the homogenized matrix	120
6.5 The one and two-dimensional cases	121
7 The multiple-scale method	125
7.1 The asymptotic expansion	125
7.2 Proof of the error estimate	133
8 Tartar's method of oscillating test functions	138
8.1 Proof of the main convergence result	138
8.2 Convergence of the energy	142
8.3 Correctors	146
8.4 Some comparison results	152
8.5 Case of weakly converging data	157
8.6 Convergence of eigenvalues	164
9 The two-scale convergence method	173
9.1 The general setting	173
9.2 Two-scale convergence	176
9.3 Proof of the main convergence result	182
9.4 A corrector result	185
10 Homogenization in linearized elasticity	188
10.1 Existence and uniqueness	190
10.2 Auxiliary periodic problems	194
10.3 Homogenization results	197
11 Homogenization of the heat equation	203
11.1 Existence and uniqueness	204
11.2 The homogenization result	211
11.3 Convergence of the energy	214
11.4 A corrector result	216
12 Homogenization of the wave equation	221
12.1 Existence and uniqueness	222
12.2 The homogenization result	231
12.3 Convergence of the energy	234
12.4 A corrector result	238
13 General approaches to the non-periodic case	241
13.1 G-convergence and H-convergence	242
13.2 Compensated compactness and correctors	245
13.3 Optimal bounds	248
