Contents

Constants, conversion factors and symbols	x
1 A (Very) Brief History of Cosmological Ideas	1
2 Observational Overview	5
2.1 In visible light	5
2.2 In other wavebands	7
2.3 Homogeneity and isotropy	8
2.4 The expansion of the Universe	9
2.5 Particles in the Universe	12
2.5.1 What particles are there?	12
2.5.2 Thermal distributions and the black-body spectrum	14
3 Newtonian Gravity	19
3.1 The Friedmann equation	20
3.2 On the meaning of the expansion	22
3.3 Things that go faster than light	23
3.4 The fluid equation	23
3.5 The acceleration equation	25
3.6 On mass, energy and vanishing factors of c^2	25
3.7 Aside: the equations from general relativity	26
4 Newtonian Cosmological Models	29
4.1 Hubble's law	29
4.2 Expansion and redshift	30
4.3 Solving the equations	31
4.3.1 Dust	31
4.3.2 Radiation	33
4.3.3 Mixtures	33
4.4 Particle number densities	34
4.5 The destiny of the Universe	36
5 The Geometry of the Universe	39
5.1 Flat geometry	39
5.2 Spherical geometry	40
5.3 Hyperbolic geometry	43
5.4 Infinite and observable Universes	43

5.5	Where did the Big Bang happen?	44
5.6	Three values of k	44
6	Observational Parameters	47
6.1	The expansion rate H_0	47
6.2	The density parameter Ω_0	49
6.3	The deceleration parameter q_0	50
6.4	The cosmological constant Λ	51
7	The Age of the Universe	55
7.1	Age and expansion	55
7.2	Resolving Olbers' paradox	58
8	The Density of the Universe and Dark Matter	61
8.1	Weighing the Universe	61
8.1.1	Counting stars	61
8.1.2	Nucleosynthesis foreshadowed	62
8.1.3	Galaxy rotation curves	62
8.1.4	Bulk motions in the Universe	63
8.1.5	The formation of structure	64
8.1.6	Inflation	65
8.2	What might the dark matter be?	66
8.3	Dark matter searches	70
9	The Cosmic Microwave Background	73
9.1	Properties of the microwave background	73
9.2	The photon to baryon ratio	74
9.3	The origin of the microwave background	76
10	The Early Universe	81
11	Nucleosynthesis: The Origin of the Light Elements	87
11.1	Hydrogen and Helium	87
11.2	Comparing with observations	90
11.3	Contrasting decoupling and nucleosynthesis	93
12	The Inflationary Universe	95
12.1	Problems with the Hot Big Bang	95
12.1.1	The flatness problem	95
12.1.2	The horizon problem	97
12.1.3	Relic particle abundances	97
12.2	Inflationary expansion	99
12.3	Solving the Big Bang problems	100
12.3.1	The flatness problem	100
12.3.2	The horizon problem	101
12.3.3	Relic particle abundances	101
12.4	How much inflation?	102
12.5	Inflation and particle physics	103

13 Structures in the Universe	107
13.1 The observed structures	107
13.2 Gravitational instability	109
13.3 The origin of structure	110
13.3.1 Inflation	110
13.3.2 Defects	111
14 The Initial Singularity	113
15 Précis	117
Bibliography	120
Numerical answers and hints to problems	122
Index	125
