## An Introduction to Relativistic Gravitation

Rémi Hakim Département d'Astrophysique Relativiste et de Cosmologie Observatoire de Meudon (France)

## Contents

Preface	
1 NEWTONIAN GRAVITATION	1
1.1 Newtonian space-time	1
1.2 Simultaneity and distance measures	4
1.3 Newton's absolutes and the notion of the ether	7
1.4 The principle of inertia	9
1.5 The laws of dynamics and Galilean relativity	12
1.6 Inertia and relativity principles as seen by Galileo	16
1.7 Newtonian gravitation	17
1.8 Measuring the gravitational constant	22
1.9 Limits of the Newtonian theory of gravity	28
1.10 The finiteness of the velocity of light	30
1.11 Michelson's experiment	34
2 MINKOWSKI SPACE-TIME	41
2.1 The space-time of special relativity	43
2.2 The Lorentz transformation	46
2.3 Remarks	48
2.4 Causality and simultaneity	52
2.5 Times and distances measured by inertial observers	58
2.6 Global properties of space-time	60
2.7 Experimental verification of Special Relativity	61
3 THE RELATIVISTIC FORM OF PHYSICAL LAWS	68
3.1 Tensor formalism	68
3.2 The Doppler effect and aberration	75
3.3 The kinematic description of particle motion	77
3.4 Relativistic dynamics: $E = mc^2$	82
3.5 Minkowski space in curvilinear coordinates	85
4 GRAVITATION AND SPECIAL RELATIVITY	95
4.1 The gravitational redshift	97
4.2 Light bending	98

	4.3 The advance of the perihelion of Mercury	99
	4.4 The need for nonlinear equations for gravitation	101
5	ELECTROMAGNETISM AND RELATIVISTIC	
5	HYDRODYNAMICS	103
	5.1 Densities and currents	103 106
	<ul><li>5.2 The equations of electromagnetism</li><li>5.3 The energy-momentum tensor</li></ul>	100
	5.4 Relativistic hydrodynamics	109.
	s. routivistic hydrodynamics	110
6	WHAT IS CURVED SPACE?	116
	6.1 Some manifestations of curvature	116
	6.2 Curvature of two-dimensional surfaces	119
	6.3 The meaning of intrinsic curvature	125
	6.4 Surfaces in $\mathbb{R}^n$ – Riemann spaces	126
	6.5 Intrinsic curvature of a manifold	129
	6.6 Properties of the curvature tensor	130
	6.7 Space-time as a Riemannian manifold	132
	6.8 Some properties of tensors in curved space	133
	6.9 Three arguments for curved space-time	134
7	THE PRINCIPLE OF EQUIVALENCE	139
7	<b>THE PRINCIPLE OF EQUIVALENCE</b> 7.1 The weak equivalence principle and the Eötvös–Dicke experiments	<b>139</b> 140
7		
7	<ul><li>7.1 The weak equivalence principle and the Eötvös-Dicke experiments</li><li>7.2 The equivalence principle and minimal coupling</li><li>7.3 The gravitational redshift</li></ul>	140
7	<ul><li>7.1 The weak equivalence principle and the Eötvös-Dicke experiments</li><li>7.2 The equivalence principle and minimal coupling</li><li>7.3 The gravitational redshift</li><li>7.4 Geodesic motion</li></ul>	140 149 157 159
7	<ul> <li>7.1 The weak equivalence principle and the Eötvös-Dicke experiments</li> <li>7.2 The equivalence principle and minimal coupling</li> <li>7.3 The gravitational redshift</li> <li>7.4 Geodesic motion</li> <li>7.5 Geodesic deviation</li> </ul>	140 149 157 159 162
7	<ul> <li>7.1 The weak equivalence principle and the Eötvös-Dicke experiments</li> <li>7.2 The equivalence principle and minimal coupling</li> <li>7.3 The gravitational redshift</li> <li>7.4 Geodesic motion</li> <li>7.5 Geodesic deviation</li> <li>7.6 The metric tensor in spherical symmetry</li> </ul>	140 149 157 159 162 163
7	<ul> <li>7.1 The weak equivalence principle and the Eötvös–Dicke experiments</li> <li>7.2 The equivalence principle and minimal coupling</li> <li>7.3 The gravitational redshift</li> <li>7.4 Geodesic motion</li> <li>7.5 Geodesic deviation</li> <li>7.6 The metric tensor in spherical symmetry</li> <li>7.7 Overview of the PPN formalism</li> </ul>	140 149 157 159 162 163 165
7	<ul> <li>7.1 The weak equivalence principle and the Eötvös–Dicke experiments</li> <li>7.2 The equivalence principle and minimal coupling</li> <li>7.3 The gravitational redshift</li> <li>7.4 Geodesic motion</li> <li>7.5 Geodesic deviation</li> <li>7.6 The metric tensor in spherical symmetry</li> <li>7.7 Overview of the PPN formalism</li> <li>7.8 The classical tests</li> </ul>	140 149 157 159 162 163 165 167
7	<ul> <li>7.1 The weak equivalence principle and the Eötvös–Dicke experiments</li> <li>7.2 The equivalence principle and minimal coupling</li> <li>7.3 The gravitational redshift</li> <li>7.4 Geodesic motion</li> <li>7.5 Geodesic deviation</li> <li>7.6 The metric tensor in spherical symmetry</li> <li>7.7 Overview of the PPN formalism</li> </ul>	140 149 157 159 162 163 165

Appendix A Tensors	227
1 Dual of a vector space	227
2 Tensor products of vector spaces	228
3 Criteria for being a tensor	229
Appendix B Exterior Differential Forms	232
1 Exterior calculus	234
2 Differential forms	236
3 Volume element: dual forms	238
4 Differentiation of forms	241
5 Maxwell's equations in differential forms	242
6 Integration of differential forms – Stokes' theorem	243
Appendix C Variational Form of the Field Equations	245
Appendix D The Concept of a Manifold	249
1 Differentiable manifolds	252
References	255
Physical Constants	270
