CLARENDON PRESS • OXFORD

1998

Contents

Notation	xiii
1. Preliminary results	1
1.1. Some abstract tools	1
1.2. The exponential of a linear continuous operator	1
1.3. Sobolev spaces	2
1.4. Vector-valued functions	4
1.4.1. Measurable functions	4
1.4.2. Integrable functions	7
1.4.3. The spaces $L^p(I, X)$	8
1.4.4. Vector-valued distributions	10
1.4.5. The spaces $W^{1,p}(I, X)$	13
2. m-dissipative operators	18
2.1. Unbounded operators in Banach spaces	18
2.2. Definition and main properties of m -dissipative operators	19
2.3. Extrapolation	21
2.4. Unbounded operators in Hilbert spaces	22
2.5. Complex Hilbert spaces	25
2.6. Examples in the theory of partial differential equations	26
2.6.1. The Laplacian in an open subset of \mathbb{R}^N : L^2 theory	26
2.6.2. The Laplacian in an open subset of \mathbb{R}^N : C_0 theory	27
2.6.3. The wave operator (or the Klein–Gordon operator) in $H_0^1(\Omega) \times L^2(\Omega)$	29
2.6.4. The wave operator (or the Klein–Gordon operator) in $L^2(\Omega) \times H^{-1}(\Omega)$	30
2.6.5. The Schrödinger operator	31
3. The Hille–Yosida–Phillips Theorem and applications	33
3.1. The semigroup generated by an m -dissipative operator	33
3.2. Two important special cases	35
3.3. Extrapolation and weak solutions	38
3.4. Contraction semigroups and their generators	39
3.5. Examples in the theory of partial differential equations	42

3.5.1.	The heat equation	42
3.5.2.	The wave equation (or the Klein–Gordon equation).	47
3.5.3.	The Schrödinger equation	47
3.5.4.	The Schrödinger equation in \mathbb{R}^N	48
4.	Inhomogeneous equations and abstract semilinear problems	50
4.1.	Inhomogeneous equations	50
4.2.	Gronwall’s lemma	54
4.3.	Semilinear problems	55
4.3.1.	A result of local existence	56
4.3.2.	Continuous dependence on initial data	59
4.3.3.	Regularity	60
4.4.	Isometry groups	61
5.	The heat equation	62
5.1.	Preliminaries	62
5.2.	Local existence	64
5.3.	Global existence	65
5.4.	Blow-up in finite time.	72
5.5.	Application to a model case	76
6.	The Klein–Gordon equation	78
6.1.	Preliminaries	78
6.1.1.	An abstract result	78
6.1.2.	Functionals on $H_0^1(\Omega)$	79
6.2.	Local existence	82
6.3.	Global existence	84
6.4.	Blow-up in finite time.	87
6.5.	Application to a model case	89
7.	The Schrödinger equation	91
7.1.	Preliminaries	91
7.2.	A general result	92
7.3.	The linear Schrödinger equation in \mathbb{R}^N	95
7.4.	The non-linear Schrödinger equation in \mathbb{R}^N : local existence	100
7.4.1.	Some estimates	101
7.4.2.	Proof of Theorem 7.4.1	106
7.5.	The non-linear Schrödinger equation in \mathbb{R}^N : global existence	112

7.6.	The non-linear Schrödinger equation in \mathbb{R}^N : blow up in finite time	114
7.7.	A remark concerning behaviour at infinity	120
7.8.	Application to a model case	121
8.	Bounds on global solutions	124
8.1.	The heat equation	124
8.1.1.	A singular Gronwall's lemma: application to the heat equation	125
8.1.2.	Uniform estimates	129
8.2.	The Klein–Gordon equation	130
8.3.	The non-autonomous heat equation	134
8.3.1.	The Cauchy problem for the non-autonomous heat equation	134
8.3.2.	<i>A priori</i> estimates	135
8.4.	The dissipative non-autonomous Klein–Gordon equation	137
9.	The invariance principle and some applications	142
9.1.	Abstract dynamical systems	142
9.2.	Liapunov functions and the invariance principle	143
9.3.	A dynamical system associated with a semilinear evolution equation	145
9.4.	Application to the non-linear heat equation	146
9.5.	Application to a dissipative Klein–Gordon equation	149
10.	Stability of stationary solutions	154
10.1.	Definitions and simple examples	154
10.2.	A simple general result	156
10.3.	Exponentially stable systems governed by PDE	158
10.4.	Stability and positivity	164
10.4.1.	The one-dimensional case	165
10.4.2.	The multidimensional case	167
	Bibliography	169
	Index	185
