Contents

Preface to the Second Edition	v
From the Preface to the First Edition	vi
Reading Plan	viii
1. The Physics and Analysis of Sound	1
A. The nature of sound	1
B. The decibel scale	3
C. Impedance	5
D. The analysis of sound	6
E. Linearity	10
F. Summary	10
2. The Outer and Middle Ears	12
A. The outer ear	12
B. The middle ear	15
C. Summary	24
D. Further reading	25
3. The Cochlea	26
A. Anatomy	26
B. The mechanics of the cochlea	37
C. The fluid spaces of the cochlea	53
D. Hair cell responses	59
E. The gross evoked potentials	68
F. Summary	75
G. Further reading	76
4. The Auditory Nerve	78
A. Anatomy	78
B. Physiology	79
C. Summary	109
D. Further reading	111

5. Mechanisms of Transduction and Excitation in the Cochlea	112
A. Introduction	112
B. The cytoskeleton of the transducer region	113
C. Mechanisms of transduction	121
D. The origin of sharp tuning in the cochlea	136
E. Cochlear nonlinearity	148
F. Hair cells and neural excitation	157
G. Summary	159
H. Further reading	162
6. The Brainstem Nuclei	163
A. Considerations in studying the central nervous system	163
B. The cochlear nuclei	165
C. The superior olivary complex	179
D. The ascending pathways of the brainstem	189
E. The inferior colliculus	189
F. The medial geniculate body	195
G. Brainstem reflexes	200
H. Summary	202
I. Further reading	204
7. The Auditory Cortex	205
A. Organization	205
B. The responses of single neurones	212
C. Behavioural studies of the auditory cortex	221
D. Hypotheses as to the function of the auditory cortex	228
E. Summary	232
F. Further reading	234
8. The Centrifugal Pathways	235
A. Introduction	235
B. The olivocochlear bundle	236
C. Centrifugal pathways to the cochlear nuclei	246
D. Centrifugal pathways in higher centres	251
E. Summary	253
F. Further reading	255
9. Physiological correlates of auditory psychophysics and performance	256
A. Introduction	256
B. The absolute threshold	257
C. Frequency resolution	258
D. Frequency discrimination	271
E. Intensity	277
F. Sound localization	283
G. Speech	286

H. Summary	294
I. Further reading	296
10. Sensorineural Hearing Loss	297
A. Types of hearing loss	297
B. Sensorineural hearing loss of cochlear origin	298
C. Physiological aspects of the cochlear prosthesis	311
D. Summary	318
E. Further reading	320
References	321
Index	353
