Providence, Rhode Island

Contents

Foreword	ix
Chapter 1. Odds and Ends	1
§1.1. Banach Spaces, Operators, and Linear Functionals	1
§1.2. Banach Lattices and Positive Operators	13
§1.3. Bases in Banach Spaces	27
§1.4. Ultrapowers of Banach Spaces	37
§1.5. Vector-valued Functions	44
§1.6. Fundamentals of Measure Theory	52
Chapter 2. Basic Operator Theory	69
§2.1. Bounded Below Operators	69
§2.2. The Ascent and Descent of an Operator	79
§2.3. Banach Lattices with Order Continuous Norms	84
§2.4. Compact and Weakly Compact Positive Operators	88
Chapter 3. Operators on <i>AL</i> - and <i>AM</i> -spaces	93
§3.1. <i>AL</i> - and <i>AM</i> -spaces	94
§3.2. Complex Banach Lattices	103
§3.3. The Center of a Banach Lattice	112
§3.4. The Predual of a Principal Ideal	119
Chapter 4. Special Classes of Operators	123
§4.1. Finite-rank Operators	123
§4.2. Multiplication Operators	135

§4.3. Lattice and Algebraic Homomorphisms	142
§4.4. Fredholm Operators	155
§4.5. Strictly Singular Operators	170
Chapter 5. Integral Operators	179
§5.1. The Basics of Integral Operators	180
§5.2. Abstract Integral Operators	193
§5.3. Conditional Expectations and Positive Projections	211
§5.4. Positive Projections and Lattice-subspaces	228
Chapter 6. Spectral Properties	237
§6.1. The Spectrum of an Operator	237
§6.2. Special Points of the Spectrum	248
§6.3. The Resolvent of a Positive Operator	253
§6.4. Functional Calculus	256
Chapter 7. Some Special Spectra	271
§7.1. The Spectrum of a Compact Operator	272
§7.2. Turning Approximate Eigenvalues into Eigenvalues	281
§7.3. The Spectrum of a Lattice Homomorphism	287
§7.4. The Order Spectrum of an Order Bounded Operator	291
§7.5. The Essential Spectrum of a Bounded Operator	298
Chapter 8. Positive Matrices	315
§8.1. The Banach Lattices $M_n(\mathbb{R})$ and $M_n(\mathbb{C})$	316
§8.2. Operators on Finite Dimensional Spaces	320
§8.3. Matrices with Non-negative Entries	329
§8.4. Irreducible Matrices	332
§8.5. The Perron–Frobenius Theorem	339
Chapter 9. Irreducible Operators	347
§9.1. Irreducible and Expanding Operators	347
§9.2. Ideal Irreducibility and the Spectral Radius	357
§9.3. Band Irreducibility and the Spectral Radius	365
§9.4. Krein Operators on $C(\Omega)$ -spaces	370
Chapter 10. Invariant Subspaces	381
§10.1. A Smorgasbord of Invariant Subspaces	383
§10.2. The Lomonosov Invariant Subspace Theorem	393

§10.3. Invariant Ideals for Positive Operators	398
§10.4. Invariant Subspaces of Families of Positive Operators	409
§10.5. Compact-friendly Operators	425
§10.6. Positive Operators on Banach Spaces with Bases	436
§10.7. A Characterization of Non-transitive Algebras	440
§10.8. Comments on the Invariant Subspace Problem	449
Chapter 11. The Daugavet Equation	455
§11.1. The Daugavet Equation and Uniform Convexity	456
§11.2. The Daugavet Property in <i>AL</i> - and <i>AM</i> -spaces	467
§11.3. The Daugavet Property in Banach Spaces	471
§11.4. The Daugavet Property in $C(\Omega)$ -spaces	477
§11.5. Slices and the Daugavet Property	487
§11.6. Narrow Operators	493
§11.7. Some Applications of the Daugavet Equation	500
Bibliography	505
Index	521
