Contents

The Methods in Ecology Series, vi

Preface, vii

- 1 Structure and biosynthesis of phenolic compounds, 1
- 2 Patterns in the distribution of phenolic secondary metabolites, 36
- 3 Why are phenolic compounds so important? 44
- 4 Extraction and chemical quantification, 66
- 5 Biochemical techniques for tannins, 104
- 6 Methods for *in vivo* studies, 134
- 7 Qualitative and quantitative separation methods, 143
- 8 Structure elucidation of phenolics, 168
- 9 For the future? Current and future utility of chemoecological studies based on phenolics, 199
