Preface	<i>xi</i>
CHAPTER 1	
Introduction to Body-Centric Wireless Communications	1
1.1 What Are Body-Centric Communications Systems?	1
1.2 Off-Body to On-Body Communications	5
1.3 On-Body Communications	5
1.4 Medical Implants and Sensor Networks	6
1.5 Layout of the Book	7
References	8
CHAPTER 2	
Electromagnetic Properties and Modeling of the Human Body	11
2.1 Electromagnetic Characteristics of Human Tissues	11
2.2 Physical Body Phantoms	12
2.2.1 Liquid Phantoms	14
2.2.2 Semisolid (Gel) or Solid (Wet) Phantoms	17
2.2.3 Solid (Dry) Phantoms	17
2.2.4 Examples of Physical Phantoms	18
2.3 Numerical Phantoms	20
2.3.1 Theoretical Phantoms	21
2.3.2 Voxel Phantoms	21
2.4 Numerical Modeling Techniques for Body-Centric Wireless Communications	22
2.4.1 Introduction of Numerical Techniques	22
2.4.2 On-Body Radio Channel Modeling	27
References	34
CHAPTER 3	
Antennas and Propagation for On-Body Communication at Microwave Frequencies	39
3.1 Introduction	39
3.2 On-Body Channel Measurement and Modeling	41
3.3 Antenna Design	51
3.3.1 Comparison of Antenna Types	52
3.3.2 Antenna Match and Efficiency	52
3.4 Simulation and Modeling	56

3.5	Systems Modeling	60
3.6	Conclusions	62
	Acknowledgments	63
	References	63

CHAPTER 4

	Transmission Mechanism of Wearable Devices Using the Human Body as a Transmission Channel	65
4.1	Introduction to Communications Using Circuits in Direct Contact with the Human Body	65
4.2	Numerical Analysis and Equivalent Circuit Models	68
4.2.1	Whole Body Models	68
4.2.2	Arm Models	70
4.2.3	Effective Electrode Structure	73
4.2.4	Equivalent Circuit Models	74
4.3	Experiments Using Human Phantom	76
4.3.1	Measurement of the Signal Distributions	76
4.3.2	Comparison Between Measurement and Calculation	78
4.3.3	Electric Field Distributions in and Around the Arm	82
4.3.4	Received Signal Voltage of the Receiver	83
4.4	Investigation of the Dominant Signal Transmission Path	86
4.4.1	Calculation Model	86
4.4.2	Electric Field Distributions and Received Signal Voltages	87
4.5	Conclusions	89
	References	91

CHAPTER 5

	Body-Centric UWB Communications	93
5.1	Overview	93
5.2	Antennas	94
5.2.1	Design and Analysis	94
5.2.2	Measurements	109
5.2.3	Concluding Remarks	111
5.3	Channel Simulation and Measurement Methodology	111
5.3.1	Simulation of the Radio Propagation in Body-Centric Communication Scenarios	111
5.3.2	Measurement of the Radio Propagation in Body-Centric Communication Scenarios	112
5.3.3	Concluding Remarks	120
5.4	Channel Characterization and Modeling	121
5.4.1	General Aspects	122
5.4.2	Personal Area Network Scenarios	124
5.4.3	Body Area Network Scenarios	129
5.4.4	Concluding Remarks	144
	References	147

CHAPTER 6

Wearable Antennas: Advances in Design, Characterization, and Application	151
6.1 Background	151
6.2 Wearable Antennas: Critical Design Issues	153
6.3 Textile Materials	155
6.4 Effects of Substrate Materials: An Example of the Fabric GPS Antenna	156
6.4.1 Effects of Ground Plane Size Attached to the Fabric Substrate on GPS Antenna Performance	159
6.5 Effect of Various Conductive Materials of Patch Antennas: An Example of WLAN Antenna on Fleece Fabric	162
6.6 Dual Frequency Wearable Antenna Design: An Example of a U-Slot Patch	166
6.6.1 Experimental Results and Discussions: Fleece and Vellux Fabrics	169
6.7 Wearable Electromagnetic Bandgap Antenna: An Example of WLAN Antenna	171
6.7.1 Remarks on Antenna Bending	176
6.8 Wearable Antennas Near the Human Body: An Example of a WLAN Antenna	180
6.8.1 Models and Methods	180
6.8.2 Results	181
6.9 Conclusions	184
Acknowledgments	186
References	186

CHAPTER 7

Body-Sensor Networks for Space and Military Applications	189
7.1 Introduction	189
7.2 Biosensor System and Basics of Biomedical RF Telemetry	190
7.2.1 Implantable Pressure Sensor	192
7.2.2 Integrated Inductor/Antenna	192
7.2.3 External Pickup Antenna	194
7.3 Antenna Design for Body Sensors	194
7.3.1 Implantable Antennas	194
7.3.2 Antennas for External Handheld Devices	203
7.4 Space, Military, and Civilian Applications	206
7.4.1 Sensors for Space Environment	206
7.4.2 Battlefield Sensors	207
7.4.3 Sensors in Hospitals and Smart Homes	207
References	208

CHAPTER 8

Antennas and Propagation for Telemedicine and Telecare: On-Body Systems	211
8.1 Telemedicine and Telecare Applications	211
8.1.1 Physiological Signals for Patient Monitoring	213
8.1.2 Technologies for Ward-Based Systems	213

8.1.3	Technologies for Home-Based and Full-Mobility Systems	215
8.1.4	Emerging Technologies and Novel Applications	215
8.1.5	Wireless Telemedicine Link Design	216
8.2	Antennas and Human Body Interaction in Personal Telemedicine	217
8.2.1	Antenna-Body Effects (Less Than 1 GHz)	220
8.2.2	Antenna-Body Effects (Greater Than 1 GHz)	224
8.2.3	Emerging Antennas	229
8.3	System Design Issues	231
8.3.1	Channel Effects	231
8.3.2	Radio Frequency Interference	232
8.4	Conclusion	236
	References	236

CHAPTER 9

	Medical Implant Communication Systems	241
9.1	Introduction	241
9.1.1	Inductive Coupling	242
9.1.2	MICS Standard	243
9.1.3	2.4-GHz ISM Band	244
9.2	Lossy Dispersive Media	244
9.2.1	Matter	244
9.2.2	Material Data and Measurements	245
9.2.3	Phantoms	246
9.2.4	Skin Depth	249
9.2.5	Wave Propagation: One-Dimensional FDTD Simulations	250
9.2.6	Influence of Patient	253
9.2.7	Phantom Influence on Antenna	253
9.3	Low-Profile Antennas for Implantable Medical Devices	255
9.3.1	What Is the Antenna?	256
9.3.2	Antenna Efficiency Calculations in Matter	256
9.3.3	Electric Versus Magnetic Antennas	258
9.3.4	Implantable Antenna Designs	260
9.3.5	Dependence on Insulation Thickness	266
9.3.6	SAR	267
9.4	Conclusion	268
	References	269

CHAPTER 10

	Summary and Conclusions	271
10.1	Overview and Conclusions	271
10.1.1	Overview of Narrowband Systems	271
10.1.2	Overview of Wideband Systems	274
10.1.3	Overview of Applications	274
10.1.4	Conclusions	275
10.2	Future Challenges	275
10.2.1	Towards Air Interfaces and New Standards	275
10.2.2	Novel Antennas for Body-Centric Wireless Communications	276

10.2.3	Medical Implant Systems	276
10.2.4	Characterization of Time-Domain Systems	277
	References	277
