List of Titled Examples and Problems xi

Foreword *by Michael Isaacson* xvii

Acknowledgments xix

Preface xxi

Organization, Notation, and Conventions xxiii

Chapter 1 Mathematical Preliminaries *by Pál Rózsa* 1

1.1 Matrices and Determinants 1
1.2 Operations with Matrices 6
1.3 The Rank of a Matrix 14
1.4 Systems of Linear Equations 19
1.4.1 Homogeneous Case 19
1.4.2 Nonhomogeneous Case 23
1.5 List of Selected Publications Dealing with Linear Algebra and Matrices 26

Chapter 2 Formats and Classification 27

2.1 Formats for Physical Relations 27
2.1.1 Numeric Format 27
2.1.2 Symbolic Format 29
2.1.3 Mixed Format 30
2.2 Classification of Physical Quantities 32
2.2.1 Variability 32
2.2.2 Dimensionality 33

Chapter 3 Dimensional Systems 37

3.1 General Statements 37
3.1.1 Monodimensional System 38
3.1.2 Omnidimensional System 41
3.1.3 Multidimensional System 42
3.2 Classification 42
3.3 The SI 43
3.3.1 Preliminary Remarks 43

3.3.2 Structure 44
(a) Fundamental Dimensions 44
(b) Derived Dimensionless Units 50
(c) Derived Dimensional Units with Specific Names 53
(d) Derived Dimensional Units without Specific Names 53
(e) Non-SI Units Permanently Permitted to be Used with SI 56
(f) Non-SI Units Temporarily Permitted to be Used with SI 59
(g) Prohibited Units 59
3.3.3 Prefixes 59
3.3.4 Rules of Etiquette in Writing Dimensions 63
3.3.4.1 Problems 65
3.4 Other Than SI Dimensional Systems 66
3.4.1 Metric, Mass-based Systems 66
(a) CGS System 66
(b) SI (for reference only) 67
3.4.2 Metric, Force-based System 67
3.4.3 American/British Force (Engineering) System 67
3.4.4 American/British Mass (Scientific) System 67
3.5 A Note on the Classification of Dimensional Systems 68

Chapter 4 Transformation of Dimensions 69
4.1 Numerical Equivalences 69
4.2 Technique 73
4.3 Examples 74
4.4 Problems 91

Chapter 5 Arithmetic of Dimensions 95

Chapter 6 Dimensional Homogeneity 99
6.1 Equations 99
6.2 Graphs 110
6.3 Problems 126

Chapter 7 Structure of Physical Relations 133
7.1 Monomial Power Form 133
7.2 The Dimensional Matrix 134
7.3 Generating Products of Variables of Desired Dimension 135
7.4 Number of Independent Sets of Products of Given Dimension (I) 139
7.5 Completeness of the Set of Products of Variables 143
7.6 Special Case: Matrix **A** is Singular 144
7.7 Number of Independent Sets of Products of Given Dimension (II); Buckingham's Theorem 148

7.8 Selectable and Nonselectable Dimensions in a Product of Variables 151
7.9 Minimum Number of Independent Products of Variables of Given Dimension 152
7.10 Constancy of the Sole Dimensionless Product 153
7.11 Number of Dimensions Equals or Exceeds the Number of Variables 157
7.11.1 Number of Dimensions Equals the Number of Variables 157
7.11.2 Number of Dimensions Exceeds the Number of Variables 159
7.12 Problems 160

Chapter 8 Systematic Determination of Complete Set of Products of Variables 163
8.1 Dimensional Set; Derivation of Products of Variables of a Given Dimension 163
8.2 Checking the Results 171
8.3 The Fundamental Formula 176

Chapter 9 Transformations 181
9.1 Theorems Related to Some Specific Transformations 181
9.2 Transformation between Systems of Different **D** Matrices 202
9.3 Transformation between Dimensional Sets 211
9.4 Independence of Dimensionless Products of the Dimensional System Used 225

Chapter 10 Number of Sets of Dimensionless Products of Variables 229
10.1 Distinct and Equivalent Sets 229
10.2 Changes in a Dimensional Set Not Affecting the Dimensionless Variables 231
10.3 Prohibited Changes in a Dimensional Set 238
10.3.1 Duplications 242
10.4 Number of Distinct Sets 244
10.5 Exceptions 250
10.5.1 Dimensionally Irrelevant Variable 250
10.5.2 In Matrix **C**, One Row is a Multiple of Another Row 255
10.6 Problems 259

Chapter 11 Relevancy of Variables 263
11.1 Dimensional Irrelevancy 263
11.1.1 Condition 263
11.1.2 Adding a Dimensionally Irrelevant Variable to a Set of Relevant Variables 267
11.1.3 The Cascading Effect 268

11.2 Physical Irrelevancy 274
11.2.1 Condition 274
11.2.2 Techniques to Identify a Physically Irrelevant Variable 276
Common Sense 277
Existence of Dimensional Irrelevancy 277
Heuristic Reasoning 280
Tests Combined with Deft Interpretation of Results 296
11.3 Problems 312

Chapter 12 Economy of Graphical Presentation 317
12.1 Number of Curves and Charts 317
12.2 Problems 329

Chapter 13 Forms of Dimensionless Relations 333
13.1 General Classification 333
13.2 Monomial is Mandatory 335
13.3 Monomial is Impossible—Proven 338
13.4 Monomial is Impossible—Not Proven 348
13.5 Reconstructions 353
13.5.1 Determination of Exponents of Monomials 353
The Measurement Method 353
The Analytic Method 354
The Heuristic Reasoning Method 354
13.5.2 Determination of Some Nonmonomials 366
13.6 Problems 373

Chapter 14 Sequence of Variables in the Dimensional Set 381
14.1 Dimensionless Physical Variable is Present 381
14.2 Physical Variables of Identical Dimensions are Present 385
14.3 Independent and Dependent Variables 389
14.4 Problems 399

Chapter 15 Alternate Dimensions 401

Chapter 16 Methods of Reducing the Number of Dimensionless Variables 413
16.1 Reduction of the Number of Physical Variables 414
16.2 Fusion of Dimensionless Variables 427
16.3 Increasing the Number of Dimensions 433
16.3.1 Dimension Splitting 433
16.3.2 Importation of New Dimensions 449
16.3.3 Using Both Mass and Force Dimensions 454
16.4 Problems 460

Chapter 17 Dimensional Modeling **463**
17.1 Introductory Remarks 463
17.2 Homology 467
17.3 Specific Similarities 468
17.3.1 Geometric Similarity 468
17.3.2 Kinematic Similarity 471
17.3.3 Dynamic Similarity 471
17.3.4 Thermal (or Thermic) Similarity 472
17.4 Dimensional Similarity 472
17.4.1 Scale Factors 479
17.4.2 Model Law 479
17.4.3 Categories and Relations 489
Categories 489
Relations 492
17.4.4 Modeling Data Table 495
17.5 Scale Effects 511
17.6 Problems 523

Chapter 18 Forty-three Additional Applications **527**
