PREFACE *xi*

ON THE USE OF COMPUTERS *xv*

Chapter 1: *MATRIX ALGEBRA* *1*

1.1 Introduction *1*
1.2 Equality, addition, and multiplication by a scalar *3*
1.3 Matrix multiplication *8*
1.4 Matrix inverses *21*
1.5 Partitioned matrices *33*
1.6 Miscellaneous problems *40*

Chapter 2: *SOME SIMPLE APPLICATIONS AND QUESTIONS* *42*

2.1 Introduction *42*
2.2 Business competition: Markov chains *43*
2.3 Population growth: powers of a matrix *50*
2.4 Equilibrium in networks: linear equations *54*
2.5 Oscillatory systems: eigenvalues *60*
2.6 General modeling: least squares *66*
2.7 Production planning: linear programs *73*
2.8 Miscellaneous problems *79*

Chapter 3: *SOLVING EQUATIONS AND FINDING INVERSES: METHODS* *82*

3.1 Introduction *82*
3.2 Solving equations by Gauss elimination *83*

3.3 Existence of solutions to systems of equations: some examples and procedures *95*
3.4 Finding inverses by Gauss elimination *100*
3.5 Row operations and elementary matrices *103*
3.6 Choosing pivots for Gauss elimination in practice *107*
3.7 The *LU*-decomposition *116*
3.8 Work measures and solving slightly modified systems *125*
3.9 Computer software for Gauss elimination *134*
3.10 Miscellaneous problems *136*

Chapter 4: SOLVING EQUATIONS AND FINDING INVERSES: THEORY 139

4.1 Introduction *139*
4.2 Gauss-reduced form and rank *140*
4.3 Solvability and solution sets for systems of equations *147*
4.4 Inverses and rank *155*
4.5 Determinants and their properties *158*
4.6 Determinantal representation of inverses and solutions *167*
4.7 Miscellaneous problems *172*

Chapter 5: VECTORS AND VECTOR SPACES 175

5.1 Introduction; geometrical vectors *175*
5.2 General vector spaces *181*
5.3 Linear dependence and linear independence *187*
5.4 Basis, dimension, and coordinates *195*
5.5 Bases and matrices *207*
5.6 Length and distance in vector spaces: norms *215*
5.7 Angle in vector spaces: inner products *220*
5.8 Orthogonal projections and bases: general spaces and Gram-Schmidt *226*
5.9 Orthogonal projections and bases: $\mathbb{R}^p$, $\mathbb{C}^p$, QR, and least squares *234*
5.10 Miscellaneous problems *246*

Chapter 6: LINEAR TRANSFORMATIONS AND MATRICES 249

6.1 Introduction; linear transformations *249*
6.2 Matrix representations of linear transformations *257*
6.3 Norms of linear transformations and matrices *263*
6.4 Inverses of perturbed matrices; condition of linear equations *268*
6.5 Miscellaneous problems *277*

Chapter 7: EIGENVALUES AND EIGENVECTORS: AN OVERVIEW 279

7.1 Introduction *279*
7.2 Definitions and basic properties *284*
7.3 Eigensystems, decompositions, and transformation representations *293*
7.4 Similarity transformations; Jordan form *299*
7.5 Unitary matrices and unitary similarity; Schur and diagonal forms *304*
7.6 Computer software for finding eigensystems *315*
7.7 Condition of eigensystems *317*
7.8 Miscellaneous problems *322*

Chapter 8: EIGENSYSTEMS OF SYMMETRIC, HERMITIAN, AND NORMAL MATRICES, WITH APPLICATIONS 325

8.1 Introduction *325*
8.2 Schur form and decomposition; normal matrices *326*
8.3 Eigensystems of normal matrices *331*
8.4 Application: singular value decomposition *338*
8.5 Application: least squares and the pseudoinverse *346*
8.6 Miscellaneous problems *353*

Chapter 9: EIGENSYSTEMS OF GENERAL MATRICES, WITH APPLICATIONS 355

9.1 Introduction *355*
9.2 Jordan form *357*
9.3 Eigensystems for general matrices *364*
9.4 Application: discrete system evolution and matrix powers *369*
9.5 Application: continuous system evolution and matrix exponentials *378*
9.6 Application: iterative solution of linear equations *388*
9.7 Miscellaneous problems *395*

Chapter 10: QUADRATIC FORMS AND VARIATIONAL CHARACTERIZATIONS OF EIGENVALUES 398

10.1 Introduction *398*
10.2 Quadratic forms in $\mathbb{R}^2$ *400*
10.3 Quadratic forms in $\mathbb{R}^p$ and $\mathbb{C}^p$ *407*
10.4 Extremizing quadratic forms: Rayleigh's principle *415*
10.5 Extremizing quadratic forms: the min-max principle *423*
10.6 Miscellaneous problems *428*

Chapter 11: LINEAR PROGRAMMING 433

11.1 Analysis of a simple example *433*
11.2 A general linear program *448*
11.3 Solving a general linear program *454*
11.4 Duality *465*
11.5 Miscellaneous problems *475*

Appendix 1: ANSWERS AND AIDS TO SELECTED PROBLEMS 479

Appendix 2: BIBLIOGRAPHY 502

INDEX OF NOTATION 505
