1997

CONTENTS

1	Density estimation for exploring data	1
1.1	Introduction	1
1.2	Basic ideas	1
1.3	Density estimation in two dimensions	6
1.4	Density estimation in three dimensions	10
1.5	Directional data	12
1.6	Data with bounded support	14
1.7	Alternative forms of density estimation	17
1.7.1	Variable bandwidths	17
1.7.2	Nearest neighbour methods	18
1.7.3	Orthogonal series methods	19
1.7.4	Local likelihood and semiparametric density estimation	20
1.8	Further reading	21
	Exercises	22
2	Density estimation for inference	25
2.1	Introduction	25
2.2	Basic properties of density estimates	25
2.3	Confidence and variability bands	29
2.4	Methods of choosing a smoothing parameter	31
2.4.1	Optimal smoothing	31
2.4.2	Normal optimal smoothing	31
2.4.3	Cross-validation	32
2.4.4	Plug-in bandwidths	34
2.4.5	Discussion	34
2.5	Testing normality	38
2.6	Normal reference band	41
2.7	Testing independence	42
2.8	The bootstrap and density estimation	44
2.9	Further reading	46
	Exercises	46
3	Nonparametric regression for exploring data	48
3.1	Introduction	48
3.2	Basic ideas	48
3.3	Nonparametric regression in two dimensions	52
3.4	Local likelihood and smooth logistic regression	53
3.5	Estimating quantiles and smoothing survival data	59

3.6	Variable bandwidths	62
3.7	Alternative forms of nonparametric regression	64
3.7.1	Gasser–Müller estimate	64
3.7.2	Smoothing splines	64
3.7.3	Orthogonal series and wavelets	65
3.7.4	Discussion	66
3.8	Further reading	67
	Exercises	67
4	Inference with nonparametric regression	69
4.1	Introduction	69
4.2	Simple properties	69
4.3	Estimation of σ^2	73
4.4	Confidence intervals and variability bands	75
4.5	Choice of smoothing parameters	77
4.6	Testing for no effect	79
4.7	A reference band for the no-effect model	81
4.8	The bootstrap and nonparametric regression	82
4.9	Further reading	84
	Exercises	84
5	Checking parametric regression models	86
5.1	Introduction	86
5.2	Testing for no effect	86
5.3	Checking a linear relationship	91
5.4	The pseudo-likelihood ratio test	97
5.5	Further reading	104
	Exercises	105
6	Comparing curves and surfaces	107
6.1	Introduction	107
6.2	Comparing density estimates in one dimension	107
6.3	Relative risk in two dimensions	112
6.4	Comparing regression curves and surfaces	117
6.5	Testing for parallel regression curves	123
6.6	Further reading	126
	Exercises	126
7	Time series data	129
7.1	Introduction	129
7.2	Density estimation	129
7.3	Conditional densities and conditional means	134
7.4	Repeated measurements and longitudinal data	137
7.5	Regression with autocorrelated errors	143
7.6	Further reading	147
	Exercises	148

8	An introduction to semiparametric and additive models	150
8.1	Introduction	150
8.2	Additive models	150
8.3	Semiparametric and varying coefficient models	160
8.4	Generalised additive models	163
8.5	Further reading	167
	Exercises	167
A	Software	169
