

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Identification Process . . . . .	3
1.2	Identification Methods . . . . .	5
1.2.1	Modal Testing . . . . .	6
1.2.2	Control-Model Identification . . . . .	7
1.2.3	Recent Advances . . . . .	10
1.3	Remarks . . . . .	12
<b>2</b>	<b>Time-Domain Models</b>	<b>15</b>
2.1	Continuous-Time State-Space Model . . . . .	16
2.2	Discrete-Time State-Space Model . . . . .	18
2.3	Weighting Sequence Description . . . . .	23
2.4	State-Space Observer Model . . . . .	26
2.5	Linear Difference Model . . . . .	31
2.6	Summary . . . . .	33
2.7	Problems . . . . .	35
<b>3</b>	<b>Frequency-Domain Models</b>	<b>41</b>
3.1	Laplace Transforms . . . . .	41
3.1.1	$s$ -Transform of Second-Order Dynamic Equations . . . . .	42
3.1.2	$s$ -Transform of Continuous-Time State-Space Model . . . . .	46
3.1.3	Impulse Response $s$ -Transform . . . . .	51
3.1.4	Pulse Response $s$ -Transform . . . . .	52
3.1.5	Sampled Impulse Response $s$ -Transform . . . . .	54
3.1.6	Sampled Pulse Response $s$ -Transform . . . . .	57
3.2	$z$ -Transforms . . . . .	63
3.2.1	$z$ -Transform of Discrete-Time State-Space Model . . . . .	67
3.2.2	$z$ -Transform of Weighting Sequence Description . . . . .	69

3.2.3	$z$ -Transform of State-Space Observer Model . . . . .	71
3.2.4	$z$ -Transform of Linear Difference Model . . . . .	75
3.3	Summary . . . . .	76
3.4	Problems . . . . .	78
<b>4</b>	<b>Frequency Response Functions</b>	<b>81</b>
4.1	Basic Formulations . . . . .	82
4.2	FRF from Input/Output DFT . . . . .	88
4.3	Input/Output Correlation . . . . .	93
4.4	DFT of Correlation Functions . . . . .	100
4.5	FRF from Correlation DFT . . . . .	104
4.6	Coherence Function . . . . .	108
4.6.1	Single Input and Single Output Case . . . . .	111
4.6.2	Two Inputs and One Output Case . . . . .	112
4.7	Summary . . . . .	115
4.8	Problems . . . . .	117
<b>5</b>	<b>System Realization Theory</b>	<b>121</b>
5.1	Controllability and Observability . . . . .	122
5.1.1	Controllability in the Discrete-Time Domain . . . . .	123
5.1.2	Observability in the Discrete-Time Domain . . . . .	127
5.2	Basic Concepts of Realization . . . . .	131
5.3	The Eigensystem Realization Algorithm (ERA) . . . . .	133
5.3.1	Candidate Methods for Distinguishing True Modes from Noise Modes . . . . .	139
5.3.2	Computational Steps of ERA . . . . .	143
5.4	The ERA with Data Correlations (ERA/DC) . . . . .	148
5.4.1	Computational Steps of ERA/DC . . . . .	153
5.5	Canonical-Form Realization . . . . .	157
5.6	Principal Hankel Component Algorithm . . . . .	162
5.7	Least-Squares Regression Technique . . . . .	165
5.8	Summary . . . . .	167
5.9	Problems . . . . .	170
<b>6</b>	<b>Observer/Kalman Filter Identification</b>	<b>175</b>
6.1	Basic Observer Equation . . . . .	176
6.2	Computation of Markov Parameters . . . . .	184
6.2.1	System Markov Parameters . . . . .	184
6.2.2	Observer Gain Markov Parameters . . . . .	188

6.3	Relationship to a Kalman Filter . . . . .	192
6.4	Computational Steps of OKID . . . . .	198
6.5	Observable Canonical-Form . . . . .	206
6.6	Observer Estimation from Output Residuals . . . . .	210
6.6.1	Deterministic and Stochastic Portions of Response . . . . .	211
6.6.2	Observer Gain Estimation . . . . .	212
6.7	Backward-Time Observer Models . . . . .	217
6.8	Summary . . . . .	225
6.9	Problems . . . . .	227
<b>7</b>	<b>Frequency-Domain State-Space System Identification</b>	<b>229</b>
7.1	Background . . . . .	230
7.2	Linear Curve-Fitting . . . . .	232
7.3	Left Matrix-Fraction Description . . . . .	233
7.3.1	Estimation of Markov Parameters . . . . .	234
7.3.2	Identification of State-Space Models . . . . .	235
7.3.3	Remarks and Discussions . . . . .	238
7.4	Right Matrix-Fraction Description . . . . .	241
7.4.1	Estimation of Markov Parameters . . . . .	243
7.4.2	Identification of State-Space Models . . . . .	243
7.5	Computational Steps . . . . .	247
7.6	Summary . . . . .	252
7.7	Problems . . . . .	252
<b>8</b>	<b>Observer/Controller Identification</b>	<b>255</b>
8.1	System Description . . . . .	256
8.2	Observer/Controller Markov Parameters . . . . .	257
8.3	System and Gain Markov Parameters . . . . .	262
8.4	System/Controller Realization . . . . .	265
8.5	Computational Steps of OCID . . . . .	266
8.6	Summary . . . . .	271
8.7	Problems . . . . .	271
<b>9</b>	<b>Recursive Techniques</b>	<b>275</b>
9.1	Classical Recursive Least-Squares Filter . . . . .	276
9.1.1	Basic Formulation . . . . .	277
9.1.2	Output Estimation Error . . . . .	281
9.1.3	Estimation-Error Squares . . . . .	283
9.2	Fast Transversal Filter . . . . .	285

9.2.1	Forward-Time Estimation . . . . .	287
9.2.2	Backward-Time Estimation . . . . .	294
9.2.3	Initialization and Recursion . . . . .	302
9.3	Least-Squares Lattice Filter . . . . .	306
9.3.1	Time Update . . . . .	307
9.3.2	Forward-Time Order Update . . . . .	310
9.3.3	Backward-Time Order Update . . . . .	313
9.3.4	Initialization and Recursion . . . . .	316
9.4	Comparison Between the Three Methods . . . . .	320
9.5	Summary . . . . .	325
9.6	Problems . . . . .	326
<b>A Fundamental Matrix Algebra</b>		<b>329</b>
A.1	Vectors and Matrices . . . . .	329
A.2	Basic Operations . . . . .	331
A.3	Special Matrices . . . . .	334
A.4	Determinants and Inverse Matrix . . . . .	334
A.5	Subspaces and Rank . . . . .	336
A.6	Vector and Matrix Norms . . . . .	337
A.7	Eigenvalues and Eigenvectors . . . . .	340
A.8	Singular Value Decomposition . . . . .	342
A.8.1	Basic Equations . . . . .	342
A.8.2	Some Areas of Application . . . . .	343
<b>B Random Variables and Kalman Filter</b>		<b>345</b>
B.1	Expectations of Random Variables . . . . .	345
B.2	Random Processes and Ergodic Property . . . . .	351
B.3	Kalman Filter . . . . .	352
B.3.1	Basic Formulation . . . . .	353
B.3.2	Steady-State Kalman Filter . . . . .	356
<b>C Data Acquisition</b>		<b>367</b>
C.1	Experimental Data . . . . .	367
C.2	Simulated Data . . . . .	369
