How to Use This Book xxiii

I Introduction 1

1 Introduction 3
1.1 Problem set-up . . . 5
1.1.1 Approximation by projection . . . 8
1.2 Summary of contents . . . 10

2 Motivating Examples 11
2.1 Passive devices . . . 11
2.2 Weather prediction—data assimilation . . . 13
2.2.1 North Sea wave surge forecast . . . 13
2.2.2 Pacific storm tracking . . . 15
2.2.3 America's Cup . . . 16
2.3 Air quality simulations—data assimilation . . . 16
2.4 Biological systems: Honeycomb vibrations . . . 17
2.5 Molecular dynamics . . . 18
2.6 International Space Station . . . 20
2.7 Vibration/acoustic systems . . . 20
2.8 CVD reactors . . . 21
2.9 Microelectromechanical devices . . . 21
2.9.1 Micromirrors . . . 22
2.9.2 Elk sensor . . . 22
2.10 Optimal cooling of steel profile . . . 24

II Preliminaries 25

3 Tools from Matrix Theory 27
3.1 Norms of finite-dimensional vectors and matrices . . . 28

3.2 The SVD . . . 31
3.2.1 Three proofs . . . 33
3.2.2 Properties of the SVD . . . 35
3.2.3 Comparison with the eigenvalue decomposition . . . 36
3.2.4 Optimal approximation in the 2-induced norm . . . 37
3.2.5 Further applications of the SVD . . . 40
3.2.6 The semidiscrete decomposition . . . 41
3.3 Basic numerical analysis . . . 41
3.3.1 Condition numbers . . . 42
3.3.2 Stability of solution algorithms . . . 44
3.3.3 Two consequences . . . 49
3.3.4 Distance to singularity . . . 50
3.3.5 LAPACK software . . . 51
3.4 General rank additive matrix decompositions* . . . 52
3.5 Majorization and interlacing* . . . 53
3.6 Chapter summary . . . 57

4 Linear Dynamical Systems: Part 1 **59**
4.1 External description . . . 60
4.2 Internal description . . . 63
4.2.1 The concept of reachability . . . 67
4.2.2 The state observation problem . . . 74
4.2.3 The duality principle in linear systems . . . 76
4.3 The infinite gramians . . . 78
4.3.1 The energy associated with reaching/observing a state . . . 80
4.3.2 The cross gramian . . . 85
4.3.3 A transformation between continuous- and discrete-time systems . 87
4.4 The realization problem . . . 88
4.4.1 The solution of the realization problem . . . 91
4.4.2 Realization of proper rational matrix functions . . . 95
4.4.3 Symmetric systems and symmetric realizations . . . 96
4.4.4 The partial realization problem . . . 97
4.5 The rational interpolation problem* . . . 99
4.5.1 Problem formulation* . . . 99
4.5.2 The Löwner matrix approach to rational interpolation* . . . 101
4.5.3 Generating system approach to rational interpolation* . . . 107
4.6 Chapter summary . . . 121

5 Linear Dynamical Systems: Part 2 **123**
5.1 Time and frequency domain spaces and norms . . . 123
5.1.1 Banach and Hilbert spaces . . . 123
5.1.2 The Lebesgue spaces ℓ_p and $\mathcal{L}_p$ . . . 124
5.1.3 The Hardy spaces h_p and $\mathcal{H}_p$ . . . 125
5.1.4 The Hilbert spaces ℓ_2 and $\mathcal{L}_2$ . . . 126
5.2 The spectrum and singular values of the convolution operator . . . 128
5.3 Computation of the 2-induced or $\mathcal{H}_\infty$-norm . . . 132
5.4 The Hankel operator and its spectra . . . 134
5.4.1 Computation of the eigenvalues of $\mathcal{H}$ . . . 136
5.4.2 Computation of the singular values of $\mathcal{H}$ . . . 137
5.4.3 The Hilbert–Schmidt norm . . . 141

5.4.4 The Hankel singular values of two related operators 142
5.5 The $\mathcal{H}_2$-norm 144
5.5.1 A formula based on the gramians 144
5.5.2 A formula based on the EVD of $\mathbf{A}$ 144
5.6 Further induced norms of $\mathcal{S}$ and $\mathcal{H}^*$ 147
5.7 Summary of norms 149
5.8 System stability 150
5.8.1 Review of system stability 150
5.8.2 Lyapunov stability 152
5.8.3 $\mathcal{L}_2$-systems and norms of unstable systems 154
5.9 System dissipativity* 159
5.9.1 Passivity and the positive real lemma* 163
5.9.2 Contractivity and the bounded real lemma* 169
5.10 Chapter summary 171

6 Sylvester and Lyapunov Equations 173
6.1 The Sylvester equation 173
6.1.1 The Kronecker product method 175
6.1.2 The eigenvalue/complex integration method 176
6.1.3 The eigenvalue/eigenvector method 178
6.1.4 Characteristic polynomial methods 179
6.1.5 The invariant subspace method 184
6.1.6 The sign function method 184
6.1.7 Solution as an infinite sum 188
6.2 The Lyapunov equation and inertia 188
6.3 Sylvester and Lyapunov equations with triangular coefficients 191
6.3.1 The Bartels–Stewart algorithm 191
6.3.2 The Lyapunov equation in the Schur basis 193
6.3.3 The square root method for the Lyapunov equation 196
6.3.4 Algorithms for Sylvester and Lyapunov equations 200
6.4 Numerical issues: Forward and backward stability* 201
6.5 Chapter summary 204

III SVD-based Approximation Methods 205

7 Balancing and Balanced Approximations 207
7.1 The concept of balancing 208
7.2 Model reduction by balanced truncation 211
7.2.1 Proof of the two theorems 213
7.2.2 $\mathcal{H}_2$-norm of the error system for balanced truncation 218
7.3 Numerical issues: Four algorithms 220
7.4 A canonical form for continuous-time balanced systems 224
7.5 Other types of balancing* 228
7.5.1 Lyapunov balancing* 229
7.5.2 Stochastic balancing* 229
7.5.3 Bounded real balancing* 231
7.5.4 Positive real balancing* 232
7.6 Frequency weighted balanced truncation* 235
7.6.1 Frequency weighted balanced truncation* 237

7.6.2 Frequency weighted balanced reduction without weights* 239
7.6.3 Balanced reduction using time-limited gramians* 241
7.6.4 Closed-loop gramians and model reduction* 241
7.6.5 Balancing for unstable systems* 242
7.7 Chapter summary 246

8 Hankel-norm Approximation **249**
8.1 Introduction 249
8.1.1 Main ingredients 250
8.2 The Adamjan–Arov–Krein theorem 252
8.3 The main result 252
8.4 Construction of approximants 254
8.4.1 A simple input-output construction method 254
8.4.2 An analogue of Schmidt–Eckart–Young–Mirsky 256
8.4.3 Unitary dilation of constant matrices 256
8.4.4 Unitary system dilation: Suboptimal case 258
8.4.5 Unitary system dilation: Optimal case 258
8.4.6 All suboptimal solutions 259
8.5 Error bounds for optimal approximants 262
8.6 Balanced and Hankel-norm approximation: A polynomial approach* 267
8.6.1 The Hankel operator and its SVD* 268
8.6.2 The Nehari problem and Hankel-norm approximants* 272
8.6.3 Balanced canonical form* 273
8.6.4 Error formulas for balanced and Hankel-norm approximations* . . 275
8.7 Chapter summary 275

9 Special Topics in SVD-based Approximation Methods **277**
9.1 Proper orthogonal decomposition 277
9.1.1 POD 278
9.1.2 Galerkin and Petrov–Galerkin projections 279
9.1.3 POD and balancing 279
9.2 Modal approximation 282
9.3 Truncation and residualization 285
9.4 A study of the decay rates of the Hankel singular values* 285
9.4.1 Preliminary remarks on decay rates* 286
9.4.2 Cauchy matrices* 287
9.4.3 Eigenvalue decay rates for system gramians* 288
9.4.4 Decay rate of the Hankel singular values* 293
9.4.5 Numerical examples and discussion* 298
9.5 Assignment of eigenvalues and Hankel singular values* 307
9.6 Chapter summary 309

IV Krylov-based Approximation Methods **311**

10 Eigenvalue Computations **313**
10.1 Introduction 314
10.1.1 Condition numbers and perturbation results 315
10.2 Pseudospectra* 318
10.3 Iterative methods for eigenvalue estimation 320

10.3.1 The Rayleigh–Ritz procedure . . . 321
10.3.2 The simple vector iteration (Power method) . . . 322
10.3.3 The inverse vector iteration . . . 322
10.3.4 Rayleigh quotient iteration . . . 323
10.3.5 Subspace iteration . . . 323
10.4 Krylov methods . . . 324
10.4.1 A motivation for Krylov methods . . . 324
10.4.2 The Lanczos method . . . 325
10.4.3 Convergence of the Lanczos method . . . 326
10.4.4 The Arnoldi method . . . 328
10.4.5 Properties of the Arnoldi method . . . 329
10.4.6 An alternative way to look at Arnoldi . . . 331
10.4.7 Properties of the Lanczos method . . . 332
10.4.8 Two-sided Lanczos . . . 333
10.4.9 The Arnoldi and Lanczos algorithms . . . 334
10.4.10 Rational Krylov methods . . . 335
10.4.11 Implicitly restarted Arnoldi and Lanczos methods . . . 336
10.5 Chapter summary . . . 341

11 Model Reduction Using Krylov Methods 343
11.1 The moments of a function . . . 345
11.2 Approximation by moment matching . . . 346
11.2.1 Two-sided Lanczos and moment matching . . . 346
11.2.2 Arnoldi and moment matching . . . 348
11.3 Partial realization and rational interpolation by projection . . . 353
11.3.1 Two-sided projections . . . 355
11.3.2 How general is model reduction by rational Krylov? . . . 357
11.3.3 Model reduction with preservation of stability and passivity . . . 358
11.4 Chapter summary . . . 361

V SVD–Krylov Methods and Case Studies 363

12 SVD–Krylov Methods 365
12.1 Connection between SVD and Krylov methods . . . 365
12.1.1 Krylov methods and the Sylvester equation . . . 366
12.1.2 From weighted balancing to Krylov . . . 366
12.1.3 Approximation by least squares . . . 368
12.2 Introduction to iterative methods . . . 371
12.3 An iterative method for approximate balanced reduction . . . 371
12.3.1 Approximate balancing through low rank approximation of the cross gramian . . . 373
12.4 Iterative Smith-type methods for model reduction . . . 380
12.4.1 ADI, Smith, and cyclic Smith(l) iterations . . . 380
12.4.2 Low rank ADI and low rank Smith(l) iterations . . . 382
12.4.3 The modified LR-Smith(l) iteration . . . 384
12.4.4 A discussion on the approximately balanced reduced system . . . 386
12.4.5 Relation of the Smith method to the trapezoidal rule . . . 387
12.5 Chapter summary . . . 388

13 Case Studies **389**
13.1 Approximation of images 389
13.2 Model reduction algorithms applied to low-order systems 390
13.2.1 Building model 392
13.2.2 Heat diffusion model 394
13.2.3 The CD player 394
13.2.4 Clamped beam model 396
13.2.5 Low-pass Butterworth filter 398
13.3 Approximation of the ISS 1R and 12A flex models 399
13.3.1 Stage 1R 400
13.3.2 Stage 12A 403
13.4 Iterative Smith-type methods 406
13.4.1 The CD player 406
13.4.2 A system of order $n = 1006$ 408
13.4.3 Aluminum plate $n = 3468$ 410
13.4.4 Heat distribution on a plate $n = 20{,}736$ 410

14 Epilogue **413**
14.1 Projectors, computational complexity, and software 413
14.2 Open problems 416

15 Problems **421**

Bibliography **441**

Index **467**
