Preface	xi
Notation	xv
1 What is an ARCH process?	1
1.1 Introduction	1
1.2 The autoregressive conditionally heteroscedastic process	8
1.3 The leverage effect	13
1.4 The non-trading period effect	15
1.5 The non-synchronous trading effect	15
1.6 The relationship between conditional variance and conditional mean	16
1.6.1 The ARCH in mean model	16
1.6.2 Volatility and serial correlation	18
2 ARCH volatility specifications	19
2.1 Model specifications	19
2.2 Methods of estimation	23
2.2.1 Maximum likelihood estimation	23
2.2.2 Numerical estimation algorithms	25
2.2.3 Quasi-maximum likelihood estimation	28
2.2.4 Other estimation methods	29
2.3 Estimating the GARCH model with EViews 6: an empirical example	31
2.4 Asymmetric conditional volatility specifications	42
2.5 Simulating ARCH models using EViews	49
2.6 Estimating asymmetric ARCH models with G@RCH 4.2 OxMetrics: an empirical example	55
2.7 Misspecification tests	66
2.7.1 The Box–Pierce and Ljung–Box Q statistics	66
2.7.2 Tse’s residual based diagnostic test for conditional heteroscedasticity	67
2.7.3 Engle’s Lagrange multiplier test	67
2.7.4 Engle and Ng’s sign bias tests	68
2.7.5 The Breusch–Pagan, Godfrey, Glejser, Harvey and White tests	69

2.7.6	The Wald, likelihood ratio and Lagrange multiplier tests	69
2.8	Other ARCH volatility specifications	70
2.8.1	Regime-switching ARCH models	70
2.8.2	Extended ARCH models	72
2.9	Other methods of volatility modelling	76
2.10	Interpretation of the ARCH process	82
	Appendix	86
3	Fractionally integrated ARCH models	107
3.1	Fractionally integrated ARCH model specifications	107
3.2	Estimating fractionally integrated ARCH models using G@RCH 4.2 OxMetrics: an empirical example	111
3.3	A more detailed investigation of the normality of the standardized residuals: goodness-of-fit tests	122
3.3.1	EDF tests	123
3.3.2	Chi-square tests	124
3.3.3	QQ plots	125
3.3.4	Goodness-of-fit tests using EViews and G@RCH	126
	Appendix	129
4	Volatility forecasting: an empirical example using EViews 6	143
4.1	One-step-ahead volatility forecasting	143
4.2	Ten-step-ahead volatility forecasting	150
	Appendix	154
5	Other distributional assumptions	163
5.1	Non-normally distributed standardized innovations	163
5.2	Estimating ARCH models with non-normally distributed standardized innovations using G@RCH 4.2 OxMetrics: an empirical example	168
5.3	Estimating ARCH models with non-normally distributed standardized innovations using EViews 6: an empirical example	174
5.4	Estimating ARCH models with non-normally distributed standardized innovations using EViews 6: the logl object	176
	Appendix	182
6	Volatility forecasting: an empirical example using G@RCH Ox	185
	Appendix	195
7	Intraday realized volatility models	217
7.1	Realized volatility	217
7.2	Intraday volatility models	220
7.3	Intraday realized volatility and ARFIMAX models in G@RCH 4.2 OxMetrics: an empirical example	223
7.3.1	Descriptive statistics	223

7.3.2	In-sample analysis	228
7.3.3	Out-of-sample analysis	232
8	Applications in value-at-risk, expected shortfall and options pricing	239
8.1	One-day-ahead value-at-risk forecasting	239
8.1.1	Value-at-risk	239
8.1.2	Parametric value-at-risk modelling	240
8.1.3	Intraday data and value-at-risk modelling	242
8.1.4	Non-parametric and semi-parametric value-at-risk modelling	244
8.1.5	Back-testing value-at-risk	245
8.1.6	Value-at-risk loss functions	248
8.2	One-day-ahead expected shortfall forecasting	248
8.2.1	Historical simulation and filtered historical simulation for expected shortfall	251
8.2.2	Loss functions for expected shortfall	251
8.3	FTSE100 index: one-step-ahead value-at-risk and expected shortfall forecasting	252
8.4	Multi-period value-at-risk and expected shortfall forecasting	258
8.5	ARCH volatility forecasts in Black–Scholes option pricing	260
8.5.1	Options	261
8.5.2	Assessing the performance of volatility forecasting methods	269
8.5.3	Black–Scholes option pricing using a set of ARCH processes	270
8.5.4	Trading straddles based on a set of ARCH processes	271
8.5.5	Discussion	279
8.6	ARCH option pricing formulas	281
8.6.1	Computation of Duan’s ARCH option prices: an example	286
	Appendix	288
9	Implied volatility indices and ARCH models	341
9.1	Implied volatility	341
9.2	The VIX index	342
9.3	The implied volatility index as an explanatory variable	344
9.4	ARFIMAX model for implied volatility index	349
	Appendix	352
10	ARCH model evaluation and selection	357
10.1	Evaluation of ARCH models	358
10.1.1	Model evaluation viewed in terms of information criteria	359
10.1.2	Model evaluation viewed in terms of statistical loss functions	360
10.1.3	Consistent ranking	367
10.1.4	Simulation, estimation and evaluation	377
10.1.5	Point, interval and density forecasts	383
10.1.6	Model evaluation viewed in terms of loss functions based on the use of volatility forecasts	384

10.2	Selection of ARCH models	386
10.2.1	The Diebold–Mariano test	386
10.2.2	The Harvey–Leybourne–Newbold test	389
10.2.3	The Morgan–Granger–Newbold test	389
10.2.4	White’s reality check for data snooping	390
10.2.5	Hansen’s superior predictive ability test	390
10.2.6	The standardized prediction error criterion	393
10.2.7	Forecast encompassing tests	400
10.3	Application of loss functions as methods of model selection	401
10.3.1	Applying the SPEC model selection method	401
10.3.2	Applying loss functions as methods of model selection	402
10.3.3	Median values of loss functions as methods of model selection	407
10.4	The SPA test for VaR and expected shortfall	408
	Appendix	410
11	Multivariate ARCH models	445
11.1	Model Specifications	446
11.1.1	Symmetric model specifications	446
11.1.2	Asymmetric and long-memory model specifications	453
11.2	Maximum likelihood estimation	454
11.3	Estimating multivariate ARCH models using EViews 6	456
11.4	Estimating multivariate ARCH models using G@RCH 5.0	465
11.5	Evaluation of multivariate ARCH models	473
	Appendix	475
	References	479
