# Architecting the Internet of Things

With a foreword by Bernd Scholz-Reiter

Springer

## Contents

**Foreword** ..... V

**Contents** ..... IX

**Figures** ..... XIX

**Tables** ..... XXIII

**Abbreviations** ..... XXV

**1 An Architectural Approach Towards the Future Internet of Things** ..... 1

Dieter Uckelmann, Mark Harrison, Florian Michahelles

1.1 Introduction, Background and Initial Visions ..... 2

1.2 Definitions and Functional Requirements ..... 4

1.3 A European Perspective on Funded Projects, Technologies and State of the Art in Relation to the Internet of Things ..... 9

1.4 Opportunities and Motivation ..... 12

1.5 Outlook to Future Developments ..... 13

1.6 A Possible Architecture for the Future Internet of Things ..... 16

1.7 Conclusion and Outlook ..... 22

References ..... 22

**2 About the "Idea of Man" in System Design – An Enlightened Version of the Internet of Things?** ..... 25

Sarah Spiekermann

2.1 Introduction ..... 25

2.2 About the Idea of Man: Definition and Relation to System Design ..... 27

2.3 The Idea of Man as Opposed to the Nature of a Computer System ..... 28

2.4 Social Interaction and Norms at the Human/Machine Interface ..... 29

2.5 The Impact of the Programmer's Idea of Man ..... 30

2.6 The Idea of Man: Steps and Challenges for its Recognition in System Design ..... 32

2.7 Conclusion ..... 34

References ..... 34

**3 Enabling the Masses to Become Creative in Smart Spaces ..... 37**

Marc Roelands, Laurence Claeys, Marc Godon, Marjan Geerts, Mohamed Ali Feki, Lieven Trappeniers

3.1 The Meaning of DiY in the Network Society ..... 37

3.1.1 DiY as Socio-Cultural Practice ..... 38

3.1.2 DiY in Software Application Creation ..... 41

3.1.3 DiY in Smart Spaces ..... 41

3.2 Research Orientation towards Tangible Creation in Smart Spaces ..... 42

3.3 Candidate Enabling Concept 1: The Call-out Internet of Things ..... 43

3.3.1 Location-based Call-outs ..... 44

3.3.2 Tag-based Call-outs ..... 45

3.3.3 Image-based Call-outs ..... 46

3.3.4 The Future of Call-outs ..... 46

3.4 Candidate Enabling Concept 2: The Smart Composables Internet of Things ..... 47

3.4.1 Object Classification According to Creator and Purpose ..... 48

3.4.2 Grounding via Experimentation ..... 50

3.5 Candidate Enabling Concept 3: The Phenomena Internet of Things ..... 52

3.5.1 Ingredients of the Phenomena Internet of Things ..... 53

3.5.2 Links to Current and Historical State of the Art ..... 55

3.5.3 Potential Application Domains ..... 57

3.5.4 Grounding via Experimentation ..... 58

3.6 Conclusion ..... 61

References ..... 62

**4 The Toolkit Approach for End-user Participation in the Internet of Things ..... 65**

Irena Pletikosa Cvijikj, Florian Michahelles

4.1 From Internet to Internet of Things ..... 65

4.2 Problems and Challenges ..... 67

4.3 Towards a Participatory Approach ..... 68

4.3.1 User-centered Design ..... 68

4.3.2 Open-source Development ..... 70

4.3.3 End-user Programming ..... 71

4.3.4 Crowdsourcing ..... 72

4.3.5 Living Labs ..... 73

4.4 Innovations to Users via Toolkits ..... 75

4.5 Existing Toolkits ..... 76

4.5.1 I/O Boards and HW Based Systems ..... 77

4.5.2 SW Based Solutions ..... 85

4.6 Discussion ..... 90

4.7 Conclusion ..... 92

References ..... 93

**5 From the Internet of Things to the Web of Things: Resource-oriented Architecture and Best Practices ..... 97**

Dominique Guinard, Vlad Trifa, Friedemann Mattern, Erik Wilde

5.1 From the Internet of Things to the Web of Things ..... 97

5.2 Designing RESTful Smart Things ..... 100

5.2.1 Modeling Functionality as Linked Resources ..... 100

5.2.2 Representing Resources ..... 101

5.2.3 Servicing Through a Uniform Interface ..... 103

5.2.4 Syndicating Things ..... 105

5.2.5 Things Calling Back: Web Hooks ..... 106

5.3 Web-enabling Constrained Devices ..... 107

5.4 Physical Mashups: Recomposing the Physical World ..... 112

5.4.1 Energy Aware Mashup: "Energie Visible" ... 113
5.4.2 Business Intelligence Mashup: RESTful EPCIS ... 114
5.4.3 A Mashup Editor for the Smart Home ... 116
5.5 Advanced Concepts: The Future Web of Things ... 118
5.5.1 Real-time Web of Things ... 119
5.5.2 Finding and Describing Smart Things ... 121
5.5.3 Sharing Smart Things ... 123
5.6 Discussing the Future Web of Things ... 126
5.7 Conclusion ... 127
References ... 128

**6 A Service-oriented, Semantic Approach to Data Integration for an Internet of Things Supporting Autonomous Cooperating Logistics Processes ... 131**

Karl A. Hribernik, Carl hans, Christoph Kramer, Klaus-Dieter Thoben

6.1 Introduction and Background ... 131
6.2 State of the Art ... 134
6.2.1 The Internet of Things ... 134
6.2.2 Autonomous Cooperating Logistics Processes ... 136
6.2.3 Item-level Information Management Approaches ... 137
6.2.4 Enterprise Application Integration Approaches ... 141
6.3 Problem Analysis ... 143
6.3.1 Logistics Systems Integration Targets ... 143
6.3.2 Integrating Intelligent Logistics Objects ... 144
6.3.3 Summary of Data Integration Requirements ... 146
6.4 Solution Concept – A Service-oriented, Ontology-based Mediator ... 149
6.4.1 Ontology-based Mediator ... 149
6.4.2 Service Interface Layer for Logical Views ... 152
6.5 Conclusions and Outlook ... 154
References ... 155

**7 Resource Management in the Internet of Things: Clustering, Synchronisation and Software Agents** ..... **159**

Tomás Sánchez López, Alexandra Brintrup, Marc-André Isenberg, Jeanette Mansfeld

7.1 Introduction ..... 159

7.2 Background and Related Work ..... 160

7.2.1 Clustering ..... 160

7.2.2 Software Agents ..... 164

7.2.3 Data Synchronisation ..... 166

7.3 Assumptions and Definitions ..... 168

7.4 Clustering for Scalability ..... 170

7.4.1 Clustering Principles in an Internet of Things Architecture ..... 170

7.4.2 The Role of Context ..... 172

7.4.3 Design Guidelines ..... 173

7.5 Software Agents for Object Representation ..... 179

7.6 Data Synchronisation ..... 182

7.6.1 Types of Network Architectures ..... 182

7.6.2 Requirements and Challenges ..... 186

7.7 Summary and Conclusion ..... 190

References ..... 191

**8 The Role of the Internet of Things for Increased Autonomy and Agility in Collaborative Production Environments** ..... **195**

Marc-André Isenberg, Dirk Werthmann, Ernesto Morales-Kluge, Bernd Scholz-Reiter

8.1 Introduction ..... 195

8.2 Emerging Challenges of Networked Enterprises ..... 197

8.3 Fundamental Concepts of Agility and Autonomy ..... 199

8.3.1 Agility ..... 199

8.3.2 Autonomous Control ..... 202

8.4 Enabling Autonomy and Agility by the Internet of Things ..... 206

8.5 Technical Requirements for Satisfying the New Demands in Production Logistics ..... 209

8.5.1 The Evolution from the RFID-based EPC Network to an Agent-based Internet of Things ..... 209

8.5.2 Agents for the Behaviour of Objects ..... 213

8.6 Application Field: Automotive Tail-lights – Intelligent Product ..... 216

8.6.1 Assembly Scenario ..... 217

8.6.2 Layout ..... 218

8.6.3 The System ..... 219

8.6.4 Technological Prerequisites ..... 221

8.7 Challenges by Developing the Internet of Things ..... 223

8.8 Conclusion and Outlook ..... 225

References ..... 226

**9 Integrated Billing Solutions in the Internet of Things ..... 229**

Dieter Uckelmann, Bernd Scholz-Reiter

9.1 Introduction ..... 229

9.2 Cost of RFID and the Internet of Things ..... 231

9.3 Benefits of RFID and the Internet of Things ..... 238

9.4 Cost Benefit Sharing ..... 241

9.5 A Technical Framework for Integrating Billing Capabilities into the EPCglobal Network ..... 242

9.6 Discussion and Outlook ..... 249

References ..... 250

**10 Business Models for the Internet of Things ..... 253**

Eva Bucherer, Dieter Uckelmann

10.1 Introduction ..... 253

10.2 Business Models and Business Model Innovation ..... 255

10.2.1 Business Models ..... 255

10.2.2 Business Model Innovation ..... 258

10.3 Value Creation in the Internet of Things ..... 260
10.3.1 Laws of Information ..... 260
10.3.2 Revenue Generation in the Internet of Things ..... 263
10.4 Exemplary Business Model Scenarios for the Interet of Things ..... 266
10.4.1 Scenario 1: Product as a Service (PaaS) ..... 266
10.4.2 Scenario 2: Information Service Providers ..... 268
10.4.3 Scenario 3: End-userInvolvement ..... 270
10.4.4 Scenario 4: Right-time Business Analysis and Decision making... 273
10.5 Conclusion ..... 275
References ..... 276

**11 The DiY Smart Experiences Project ..... 279**

Marc Roelands, Johan Plomp, Diego Casado Mansilla, Juan R. Velasco, Ismail Salhi, Gyu Myoung Lee, Noel Crespi, Filipe Vinci dos Santos, Julien Vachaudez, Frédéric Bettens, Joel Hanqc, Carlos Valderrama, Nilo Menezes, Alexandre Girardi, Xavier Ricco, Mario Lopez-Ramos, Nicolas Dumont, Iván Corredor, Miguel S. Familiar, José F. Martínez, Vicente Hernández, Dries De Roeck, Christof van Nimwegen, Leire Bastida, Marisa Escalante, Juncal Alonso, Quentin Reul, Yan Tang, Robert Meersman

11.1 Drivers, Motives and Persona in the DiY Society ..... 280
11.1.1 Evolution of DiY ..... 281
11.1.2 Why Do People Build Things Themselves? ..... 281
11.1.3 People Motivation as Driver ..... 282
11.1.4 People Logics, Distinguishing Motivation Levels ..... 282
11.1.5 Eco-awareness, an Example Application Theme in DiYSE ..... 284
11.2 Sensor-actuator Technologies and Middleware as a Basis for a DiY Service Creation Framework ..... 289
11.2.1 Device Integration ..... 290
11.2.2 Middleware Technologies Needed for a DiY Internet of Things ... 293
11.3 Semantic Interoperability as a Requirement for DiY Creation ..... 295
11.3.1 Ontology ..... 295
11.3.2 Ontology Engineering Methodologies ..... 296

11.3.3 Application of Ontology Engineering in the Internet of Things..... 298
11.4 The DiYSE Service Framework..... 302
11.4.1 Contextualisation Layer..... 303
11.4.2 Service Composition and Exposition Layer..... 304
11.4.3 Execution Layer..... 305
11.4.4 DiYSE Application Creation and Deployment..... 305
11.5 Interactions, Using and Creating in Smart Spaces..... 306
11.5.1 Service Interaction and Environment Configuration..... 307
11.5.2 Ecological Design Approach..... 307
11.5.3 Architectural Support and Modelling for Interaction..... 308
11.5.4 Example Personalised Interaction Method: Smart Companion Devices..... 309
11.5.5 Multimodal Middleware Protocol..... 311
11.5.6 The Ultimate Example: Simple Smart Space Interaction with Multi-device Interfaces..... 311
11.6 Conclusion - Future Work of the Consortium..... 312
References..... 313

**12 Intelligent Cargo – Using Internet of Things Concepts to Provide High Interoperability for Logistics Systems..... 317**

Jens Schumacher, Mathias Rieder, Manfred Gschweidl, Philip Masser

12.1 Introduction..... 317
12.2 Semantic Web..... 319
12.2.1 Semantic Web Services..... 320
12.2.2 Semantic Web Services Processes and Lifecycle..... 321
12.3 Ontology..... 325
12.3.1 Ontology and the Organisational Perspective..... 326
12.3.2 Ontology and the IT-System Perspective..... 327
12.3.3 Ontology and the Data Perspective..... 327
12.3.4 Ontologies in Multi-agent Systems..... 329
12.3.5 The Role of a Top-level Ontology..... 331

12.4 The Internet of Things in Context of EURIDICE ..... 332
12.4.1 Interoperability in EURIDICE ..... 333
12.4.2 The EURIDICE Architecture ..... 337
12.4.3 Integration ..... 339
12.4.4 Deployment ..... 340
12.4.5 Project Evaluation ..... 341
12.4.6 EURIDICE and the Internet of Things ..... 341
12.5 Business Impact ..... 342
12.6 Future Developments ..... 344
12.7 Conclusion ..... 345
References ..... 346

**Index ..... 349**

**About the Editors ..... 353**
