Asymptotic Theory of Statistical Inference for Time Series

With 10 Illustrations

Springer

Contents

Preface	vii
Notation	xv
1 Elements of Stochastic Processes	1
1.1 Introduction	1
1.2 Stochastic Processes	1
1.3 Limit Theorems	17
Problems	28
2 Local Asymptotic Normality for Stochastic Processes	31
2.1 General Results for Local Asymptotic Normality	31
2.2 Local Asymptotic Normality for Linear Processes	37
Problems	48
3 Asymptotic Theory of Estimation and Testing for Stochastic Processes	51
3.1 Asymptotic Theory of Estimation and Testing for Linear Processes	52
3.1.1 Asymptotic Theory Based on a Gaussian Likelihood	52
3.1.2 Asymptotic Theory of Estimation and Testing Based on LAN Results	63
3.2 Asymptotic Theory for Nonlinear Stochastic Models	79
3.2.1 Nonlinear Models	79

3.2.2	Probability Structure of Nonlinear Models	85
3.2.3	Statistical Testing and Estimation Theory for Nonlinear Models	92
3.2.4	Asymptotic Theory Based on the LAN Property . .	103
3.2.5	Model Selection Problems	109
3.2.6	Nonergodic Models	115
3.3	Asymptotic Theory for Continuous Time Processes	121
3.3.1	Stochastic Integrals and Diffusion Processes	122
3.3.2	Asymptotic Theory for Diffusion Processes	129
3.3.3	Diffusion Processes and Autoregressions with Roots Near Unity	140
3.3.4	Continuous Time ARMA Processes	149
3.3.5	Asymptotic Theory for Point Processes	152
	Problems	163
4	Higher Order Asymptotic Theory for Stochastic Processes	167
4.1	Introduction to Higher Order Asymptotic Theory	168
4.2	Valid Asymptotic Expansions	187
4.3	Higher Order Asymptotic Estimation Theory for Discrete Time Processes in View of Statistical Differential Geometry	212
4.4	Higher Order Asymptotic Theory for Continuous Time Processes	234
4.5	Higher Order Asymptotic Theory for Testing Problems . . .	249
4.6	Higher Order Asymptotic Theory for Normalizing Transformations	266
4.7	Generalization of LeCam's Third Lemma and Higher Order Asymptotics of Iterative Methods	277
	Problems	303
5	Asymptotic Theory for Long-Memory Processes	307
5.1	Some Elements of Long-Memory Processes	309
5.2	Limit Theorems for Fundamental Statistics	317
5.3	Estimation and Testing Theory for Long-Memory Processes	333
5.4	Regression Models with Long-Memory Disturbances	345
5.5	Semiparametric Analysis and the LAN Approach	371
	Problems	381
6	Statistical Analysis Based on Functionals of Spectra	385
6.1	Estimation of Nonlinear Functionals of Spectra	386
6.2	Application to Parameter Estimation for Stationary Processes	399
6.3	Asymptotically Efficient Nonparametric Estimation of Functionals of Spectra in Gaussian Stationary Processes . .	415
6.4	Robustness in the Frequency Domain Approach	424

6.4.1	Robustness to Small Trends of Linear Functionals of a Periodogram	424
6.4.2	Peak-Insensitive Spectrum Estimation	430
6.5	Numerical Examples	455
	Problems	472
7	Discriminant Analysis for Stationary Time Series	477
7.1	Basic Formulation	478
7.2	Standard Methods for Gaussian Stationary Processes	480
7.2.1	Time Domain Methods	480
7.2.2	Frequency Domain Methods	490
7.2.3	Admissible Linear Procedure: Case of Unequal Mean Vectors and Covariance Matrices	494
7.3	Discriminant Analysis for Non-Gaussian Linear Processes	500
7.4	Nonparametric Approach for Discriminant Analysis	505
7.5	Parametric Approach for Discriminant Analysis	514
7.6	Derivation of Spectral Expressions to Divergence Measures Between Gaussian Stationary Processes	526
7.7	Miscellany	531
	Problems	534
8	Large Deviation Theory and Saddlepoint Approximation for Stochastic Processes	537
8.1	Large Deviation Theorem	538
8.2	Asymptotic Efficiency for Gaussian Stationary Processes: Large Deviation Approach	546
8.2.1	Asymptotic Theory of Neyman-Pearson Tests	546
8.2.2	Bahadur Efficiency of Estimator	551
8.2.3	Stochastic Comparison of Tests	561
8.3	Large Deviation Results for an Ornstein-Uhlenbeck Process	570
8.4	Saddlepoint Approximations for Stochastic Processes	578
	Problems	601
Appendix		605
A.1	Mathematics	605
A.2	Probability	609
A.3	Statistics	617
