

Stability and Degradation of Organic and Polymer Solar Cells

Editor

FREDERIK C. KREBS

*Department of Energy Conversion and Storage,
Technical University of Denmark, Roskilde, Denmark*

A John Wiley & Sons, Ltd., Publication

Contents

<i>Preface</i>	xi
<i>Acknowledgements</i>	xiii
<i>List of Contributors</i>	xv
1. The Different PV Technologies and How They Degrade	1
<i>Frederik C. Krebs</i>	
1.1 The Photovoltaic Effect and the Overview	1
1.2 The Photovoltaic Technologies	2
1.3 Intrinsic Versus Extrinsic Stability	3
1.3.1 Intrinsic Stability	3
1.3.2 Extrinsic Stability	3
1.4 Degradation – The Culprits, the What, the Why and the How	3
1.5 Some Representative Technologies and How They Degrade	4
1.5.1 Mono- and Polycrystalline Silicon Solar Cells	5
1.5.2 Amorphous, Micro- and Nanocrystalline Silicon Solar Cells	6
1.5.3 CIS/CIGS Solar Cells	8
1.5.4 CdS/CdTe Solar Cells	9
1.5.5 Dye-Sensitized Solar Cells (DSSC)	10
1.5.6 Organic and Polymer Solar Cells (OPV)	11
References	12
2. Chemical and Physical Probes for Studying Degradation	17
<i>Birgitta Andreasen and Kion Norrman</i>	
2.1 Introduction	17
2.2 Physical Probes	18
2.2.1 UV-vis Spectroscopy	18
2.2.2 Atomic Force Microscopy (AFM)	18
2.2.3 Interference Microscopy	20
2.2.4 Scanning Electron Microscopy (SEM)	21
2.2.5 Fluorescence Microscopy	23
2.2.6 Light-Beam Induced-Current Microscopy (LBIC)	24
2.2.7 Electroluminescence and Photoluminescence Imaging Microscopy (ELI and PLI)	25
2.2.8 X-ray Reflectometry	26

2.3	Chemical Probes	27
2.3.1	Infrared Spectroscopy (IR)	27
2.3.2	Time-of-Flight Secondary Ion Mass Spectrometry (TOF-SIMS)	28
2.3.3	X-ray Photoelectron Spectroscopy (XPS)	32
2.4	Summary and Outlook	35
	References	36
3.	Imaging Techniques for Studying OPV Stability and Degradation	39
	<i>Marco Seeland, Roland Rösch and Harald Hoppe</i>	
3.1	Introduction to Imaging Techniques	39
3.1.1	Microscopy and Optical Scanning	39
3.1.2	Luminescence Imaging	40
3.1.3	Lock-In Thermography	43
3.1.4	Light-Beam Induced Current	45
3.2	Reports	46
3.2.1	Background: Degradation of OLED Devices	46
3.2.2	Light-Beam Induced Current	50
3.2.3	Luminescence Imaging	54
3.2.4	Optical Microscopy	57
3.2.5	Dark Lock-In Thermography and LBIC	58
3.2.6	Dark Lock-In Thermography and Optical Scanning for Failure Analysis	62
3.3	Discussion: Comparison of Imaging Techniques	63
3.4	Summary	66
	Acknowledgement	66
	References	66
4.	Photochemical Stability of Materials for OPV	71
	<i>Matthieu Manceau, Agnès Rivaton and Jean-Luc Gardette</i>	
4.1	Introduction	71
4.2	Methods	72
4.2.1	Aging Condition	72
4.2.2	Degradation Monitoring	74
4.3	State-of-the-Art	82
4.3.1	Degradation of the π -Conjugated Polymer	82
4.3.2	Acceptor Material Aging and Blend Degradation	99
	References	102
5.	Degradation of Small-Molecule-Based OPV	109
	<i>Martin Hermenau, Moritz Riede and Karl Leo</i>	
5.1	Comparison to Small-Molecule OLEDs	110
5.1.1	Number of Photoexcitations per Molecule	113
5.2	Comparison to Polymer Solar Cells	115
5.2.1	Sensitivity to Air	115
5.2.2	Temperature Stability	115

5.3	Small-Molecule Organic Materials	116
5.3.1	Active Materials	116
5.3.2	Transport- and Exciton-Blocking Materials	119
5.4	Degradation Conditions	125
5.4.1	Oxygen and Water	125
5.4.2	UV Radiation	132
5.5	State-of-the-Art in Lifetime Studies	134
5.6	Summary and Outlook	138
	References	139
6.	Degradation of Polymer-Based OPV	143
	<i>Mikkel Jørgensen and Frederik C. Krebs</i>	
6.1	Focus on the Degradation and Stability of Polymer Solar Cells	143
6.2	A Chart of Degradation and Stability of Polymer Solar Cells	143
6.3	A Short Account of the OPV Stability/Degradation History	144
6.3.1	The Divisions of Degradation Mechanisms	146
6.3.2	The Methodologies	148
6.4	Modus Operandi for Evolving OPV	148
6.5	The Recent Developments	149
6.5.1	The Photocatalytic Oxides	149
6.5.2	Interlayers	150
6.5.3	The Inverted Structure	151
6.5.4	R2R Processing	152
6.5.5	Lamination and Encapsulation	153
6.5.6	Water Processing	154
6.5.7	Mechanical Degradation – Delamination	155
6.6	Interlaboratory Studies and Round Robins	156
6.7	Outside Studies	157
6.8	How Far Can OPV Be Taken in Terms of Stability?	158
	References	158
7.	Test Equipment for OPV Stability	163
	<i>Olivier Haillant</i>	
7.1	Introduction	163
7.2	Reliability and Durability Testing of PV Products	165
7.2.1	Reliability, a Function of Durability	165
7.2.2	Environmental Durability	166
7.2.3	Durability and Weathering Testing	167
7.3	Laboratory Weathering Testing	168
7.3.1	Acceleration	168
7.3.2	Relevance	169
7.3.3	Precision	170
7.3.4	Introduction to Determination of Acceleration Factors	170

7.4	Durability Testing Techniques	172
7.4.1	Outdoor Weathering	172
7.4.2	Laboratory Weathering	175
7.4.3	Laboratory Photoaging	180
7.4.4	Others	183
7.5	Conclusion	185
	References	186
8.	Characterization and Reporting of OPV Device Lifetime	193
	<i>Suren A. Gevorgyan</i>	
8.1	Introduction	193
8.2	Photoelectric Characterization of OPV Devices	194
8.2.1	Photoelectric Characterization Tools	194
8.2.2	Characterization in Controlled Environments	197
8.3	Interlaboratory Studies of OPVs	202
8.3.1	Introduction	202
8.3.2	Interlaboratory Studies of Flexible Large-Area Roll-to-Roll Processed Polymer Solar Cell Modules	203
8.3.3	Interlaboratory Stability Studies of OPVs	204
8.4	Lifetime Testing and Reporting: Standardized Approach	213
8.4.1	Introduction	213
8.4.2	Procedures for Standard Lifetime Measurements	214
8.4.3	Reporting Lifetime	235
8.5	Conclusions	238
	List of Abbreviations	238
	References	238
9.	Concentrated Light for Organic Photovoltaics	243
	<i>Thomas Tromholt</i>	
9.1	Introduction	243
9.2	Light-Concentration Setups	245
9.2.1	Refractive Sunlight Concentration	245
9.2.2	Reflective Sunlight Concentration	246
9.2.3	Concentrated Solar Simulation	249
9.3	Experimental Work Performed with Concentrated Light	251
9.3.1	IPV Response to Concentrated Sunlight	251
9.3.2	Polymer Response to Concentrated Light	253
9.3.3	Organic Solar Cell Response to Concentrated Light	257
9.4	Physical Characterization by Concentrated Sunlight	261
9.5	Conclusion	265
	References	265
10.	Barrier Technology and Applications	269
	<i>Lars Müller-Meskamp, John Fahlteich and Frederik C. Krebs</i>	
10.1	Encapsulation Requirements	269
10.1.1	Types of Encapsulation	270

10.1.2	Glass/Glass Encapsulation	271
10.1.3	Lamination of Barrier Films	272
10.1.4	Thin-Film Encapsulation	273
10.1.5	Perimeter Sealing	273
10.2	Thin-Film Permeation Physics	274
10.2.1	Solid-State Diffusion and Diffusion in Polymers	274
10.2.2	Fick's First Law of Diffusion	275
10.2.3	Sorption	276
10.2.4	Permeation in Thin Films	277
10.2.5	Models for the Permeation Barrier Coated Polymer Films	278
10.2.6	Temperature Dependence of Permeation	279
10.2.7	Dependence of Water Permeation on Layer Thickness	280
10.2.8	Time Dependence of Permeation	282
10.2.9	Permeation in Multilayer Barriers	284
10.2.10	Pinholes in Multilayer Systems	287
10.3	Measurement of Barrier Properties	288
10.3.1	Gravimetric Cup	289
10.3.2	Carrier-Gas-Based Coulometric Barrier Measurement	289
10.3.3	Mass Spectrometer	290
10.3.4	Direct Pressure Measurement	291
10.3.5	Radioactive Isotopes	292
10.3.6	Calcium Test (Optical or Electrical)	293
10.3.7	Device Testing	294
10.3.8	Standards and Typical Measurement Conditions	295
10.3.9	Test Method Overview	295
10.4	Barrier Technologies	295
10.4.1	Single-Layer Technologies	297
10.4.2	Multilayer Technologies	309
10.5	Barrier Application in OPV	315
10.5.1	Products	316
10.5.2	Barrier Cost and Manufacturability	318
10.6	Conclusion	321
	References	322
11.	Summary and Outlook	331
	<i>Frederik C. Krebs</i>	
	Index	333
