Contents

1 Introduction 1

1.1 A historical note 1
1.2 Observational background 3
1.3 The frame of geomaterials constitutive modeling 7
1.4 Considered topics 11
Literature 12

2 Basic concepts from continuum mechanics 14

2.1 Kinematic and static considerations 14
2.1.1 Lagrangian description of the deformation 14
2.1.2 Eulerian description of the deformation 17
2.1.3 Deformation of surface and volume elements 19
2.1.4 Static considerations 20
2.2 Time derivatives and rates 22
2.2.1 Material time derivative and velocity 22
2.2.2 Relative deformation gradient and its rate 24
2.2.3 Rigid-body or Jaumann derivative 26
2.2.4 Convective time derivative 27
2.2.5 Material derivative of volume integrals 29
2.3 Balance equations 31
2.3.1 Mass balance 31
2.3.2 Balance of linear momentum 32
2.3.3 Balance of angular momentum 33
2.3.4 Energy balance 35
2.3.5 Entropy inequalities and balance 37
2.4 Discontinuous fields and wave fronts 39
2.4.1 Geometric compatibility conditions 39
2.4.2 Kinematic compatibility conditions 41
2.4.3 Dynamic compatibility conditions 43
2.4.4 Weak discontinuities 46
Literature 47

3 Incremental continuum mechanics 51

3.1 Updated Lagrangian description 51
3.1.1 Kinematical considerations 51
3.1.2 Plane-strain deformations 52
3.1.3 Deformation of line, surface and volume elements 54
3.1.4 Stresses and stress increments 56
3.2 Infinitesimal strain superimposed upon finite strain 62
3.2.1 Plane rectilinear deformations 62
3.2.2 Superposition of rectilinear deformations 63
3.2.3 Superposition of pure shear 64
3.2.4 Hypoelastic constitutive equations 67

3.3 Equilibrium bifurcation 73
3.3.1 The principle of virtual work 73
3.3.2 The zero moment condition 77
3.3.3 Configuration-dependent loading 80
3.3.4 The linear bifurcation problem 83
3.3.5 Uniqueness theorems under dead loading 85
3.4 Acceleration waves and stationary discontinuities 88
Literature 91

4 Buckling of layered elastic media 92

4.1 Folding of elastic and viscoelastic media as a bifurcation problem 92
4.2 Surface and interfacial instabilities in elastic media 93
4.2.1 Buckling of a single layer under initial stress 93
4.2.2 Buckling of a system of layers — the transfer matrix technique 99
4.2.3 Surface instability of a homogeneous half-space 101
4.2.4 The problem of wavelength selection 105
4.2.5 Interfacial instability 109
4.3 Periodic elastic multilayered media 111
4.3.1 The asymptotic averaging method 112
4.3.2 Example: Surface instabilities in a multilayered periodic half-space 117
4.3.3 Limitations of the asymptotic averaging method 120
4.4 Elastic anisotropic Cosserat continuum 120
4.4.1 Basic concepts 120
4.4.2 The Cosserat model of a multilayered medium 121
4.4.3 Example: Buckling of an homogeneous Cosserat half-space 122
4.5 The effect of surface parallel Griffith cracks 124
4.5.1 Analytical solution for a single crack 124
4.5.2 Buckling of a half-space with a periodic array of coplanar cracks 129
4.5.3 A Cosserat continuum representation 132
4.5.4 Influence of the initial stress field on crack propagation 136
4.6 Concluding remarks and discussion 138
Literature 139

5 Mechanics of water-saturated granular materials 142

5.1 Definitions 142
5.2 Mass balance equations 145
5.3 Static considerations: partial and 'effective' stresses 148
5.4 The influence of grain and fluid compressibility 150
5.5 Balance of linear momentum 154
5.6 Laws governing fluid flow in porous media 156
5.6.1 Darcy's law 156
5.6.2 Biot's modification of viscous and inertial drag 160
5.6.3 Forchheimer's extension of Darcy's law 163
5.6.4 Brinkman's and Aifantis' modification of Darcy's law 165
5.7 The incremental initial, boundary value problem 169
5.7.1 Governing equations 169
5.7.2 The incremental problem 171
5.7.3 Linear stability analysis 172
5.8 Compaction instabilities 177
5.8.1 Grain crushing 177
5.8.2 Stability of non-uniform compaction 180
Literature 182

6 Plasticity theory for granular materials 185

6.1 Micromechanical considerations 185
6.1.1 Kinematics 185
6.1.2 Statics 189
6.2 Flow theory of plasticity 191
6.2.1 The Mróz–Mandel non-associative elastoplasticity 191
6.2.2 Stress-dependent elasticity 197
6.2.3 Finite strain formulations 200
6.2.4 The equation of thermoelastoplasticity 202
6.2.5 Drucker's postulate 203
6.2.6 Uniqueness theorems for elastoplastic solids 205
6.3 Simple constitutive models for frictional materials 207
6.3.1 Stress invariants 207
6.3.2 The Drucker–Prager and Mohr–Coulomb models 213
6.3.3 Data reduction and model calibration 216
6.3.4 Lade's yield surface model 225
6.4 Extensions of isotropic hardening plasticity 227
6.4.1 Non-potential flow rules 227
6.4.2 Yield surface modifications 231
6.4.3 Modeling of strain softening 232
6.5 2D-constitutive model for sand 238
6.5.1 Model justification 238
6.5.2 Formulation 241
6.5.3 Example of model calibration 246
Literature 251

7 Bifurcation analysis of element tests 254

7.1 Observational background 254
7.2 Bifurcation analysis of the triaxial compression and extension tests 258
7.2.1 Problem statement 258
7.2.2 A deformation theory of plasticity 260
7.2.3 Governing equations 262
7.2.4 Bifurcation condition 265
7.2.5 Example of triaxial compression test on medium dense Karlsruhe sand 265
7.3 Bifurcation analysis of the biaxial test 266
7.3.1 Formulation of the diffuse bifurcation problem 268
7.3.2 Classification of regimes and bifurcation condition 270
7.3.3 Example: Biaxial compression test on a Dutch sand 274
References 275

8 Shear-band bifurcation in granular media 277

8.1 Equilibrium bifurcation and stability 277
8.1.1 The Thomas–Hill–Mandel shear-band model 277
8.1.2 Mandel's dynamic stability analysis 283
8.2 Shear-band formation in element tests 285
8.2.1 Shear-band analysis in plane strain rectilinear deformations 285
8.2.2 Analysis of a biaxial compression test on sand 289
8.2.3 Imperfection sensitivity of the biaxial test 292
8.2.4 Spontaneous versus progressive localization 294
8.3 Shear banding in sands: experiment versus theory 296
8.3.1 Influence of porosity 297
8.3.2 Influence of confining pressure 298
8.3.3 Influence of anisotropy 303
8.3.4 Influence of grain size and shape 306

8.4 Non-coaxial plasticity model 307
8.5 Localization in inhomogeneous stress field 313
8.5.1 The cavity inflation test 313
8.5.2 Global bifurcation analysis of the cavity inflation test 321
8.5.3 Progressive failure 325
Literature 330

9 Cosserat continuum model for granular materials 334

9.1 Micromechanical considerations 334
9.1.1 Motivation 334
9.1.2 Kinematical considerations 337
9.1.3 Static considerations 341
9.2 Basic concepts from Cosserat continuum mechanics 344
9.2.1 Kinematics of 2D Cosserat continuum 344
9.2.2 Dynamics and statics 346
9.2.3 Principles of virtual work 351
9.2.4 The boundary-layer effect 353
9.3 The Mühlhaus–Vardoulakis Cosserat plasticity model 359
9.3.1 Definitions 359
9.3.2 Elastic strains 360
9.3.3 Plastic strains 361
9.3.4 Constitutive equations 362
9.4 Prediction of the shear-band thickness 363
9.4.1 Governing equations 365
9.4.2 Shear-band solution 367
9.4.3 Analytical and experimental results 370
9.5 Discussion and numerical implications 373
Literature 379

10 Second-grade plasticity theory for geomaterials 382

10.1 Mindlin's formalism of microstructure 382
10.1.1 Kinematics 382
10.1.2 The principle of virtual work 384
10.1.3 Example: Gradient elasticity theory with surface energy 386
10.2 Second-grade plasticity theory for granular rocks 390
10.2.1 Observational background 390
10.2.2 Constitutive modeling 394
10.2.3 Constitutive equations 399
10.2.4 Formulation of the rate-boundary value problem 402
10.2.5 Well-posedeness of the rate-boundary value problem 406
10.3 Bifurcation analysis deep boreholes 410
10.3.1 Problem statement 410
10.3.2 Bifurcation analysis 411
10.3.3 The scale effect 413
10.4 A 2D-gradient model for granular media 416
10.4.1 Constitutive equations 416
10.4.2 Shear-band analysis 419
Literature 423

11 Stability of undrained deformations 426

11.1 Monotonic biaxial tests on water-saturated sand 426
11.1.1 Experimental basis 427
11.1.2 Simulation and discussion 432
11.2 Theoretical implications 438

11.3 Bifurcation and stability 441
11.3.1 Undrained shear banding 441
11.3.2 Linear stability analysis 445
11.3.3 Regularization 448
11.3.4 Globally undrained shear banding 451
11.4 Grain size and shape effect 454
Literature 458
