Thomas C. Moore

Biochemistry and Physiology of Plant Hormones

Second Edition

With 177 Figures

Springer-Verlag
New York Heidelberg Berlin
London Paris Tokyo Hong Kong

Contents

CHAPTER 1	INTRODUCTION	1
Fundamental Terms and Concepts		1
Patterns and Kinetics of Growth in Cells, Tissues, Organs, and Whole Plants		3
Discontinuities in Growth, Growth Periodicities, and Problems of Relative Growth Rate		12
Mechanisms Controlling Cellular Differentiation		14
Introduction to Plant Hormones		23
References		25
CHAPTER 2	AUXINS	28
Brief History of Discovery		28
Went's <i>Avena</i> Coleoptile Curvature Test		31
Early Isolations of IAA		32
Synthetic Auxins		33
Controversy Surrounding the Use of Certain Chlorophenoxy Acids as Herbicides and Defoliants		34
Natural Occurrence of Auxins		38
Auxin Biosynthesis		39
"Free" and "Bound" Auxin		42
Destruction of IAA		44
Auxin Transport		47
Relationships between Auxin Content and Growth		54
Correlative Differences in Auxin Relations between Etiolated and Light-Grown and Dwarf and Normal Plants		58
Mechanism of Auxin Action		61
References		85
CHAPTER 3	GIBBERELLINS	94
Brief History of Discovery		94
Chemical Characterization of GAs		96
Natural Occurrence of GAs		104
GA Biosynthesis in Seeds		104
GA Biosynthesis in Systems Other Than Seeds		108
Effects of Light on GA Biosynthesis		113
Role of GAs in Dwarfism		114
Other Aspects of GA Metabolism		121

Quantitative Changes in GA Content during Development	123
Sites of GA Biosynthesis in Seed Plants	134
Transport of GA	136
Anatomical and Biophysical Basis of GA-Induced Growth	136
Mechanism of Action of GA	139
References	150
 CHAPTER 4 CYTOKININS	 158
History of Discovery	158
Terminology	159
Isolation of Kinetin and the Search for Other Naturally Occurring Cytokinins	159
Discovery of Natural Cytokinins	160
Effects of Cytokinins and Other Hormones in Organisms Other Than Seed Plants	166
Structure/Activity Relationships of the Cytokinins	167
Biosynthesis and Metabolism	170
Auxin and Cytokinin Biosynthesis in Crown Gall Tumors	174
Mechanisms of Origin in tRNA	174
Metabolic Consequences of the Presence of Cytokinins in tRNA	178
Hormonal Activity of Free Cytokinins	179
Cytokinin Binding Protein	180
Effects on Moss Protonemata	181
Some Physiological Effects on Seed Plants	184
Translocation	188
References	189
 CHAPTER 5 ABSCISIC ACID AND RELATED COMPOUNDS	 196
Introduction	196
History of Discovery	197
Chemical Characterization	201
Biosynthesis and Other Features of Metabolism	202
Natural Occurrence of ABA	207
Physiological Effects	208
State of Chromatin in Dormant Tissues and the Mechanism of Action of ABA	220
References	221
 CHAPTER 6 ETHYLENE	 228
Historical Background	228
Ethylene and Fruit Ripening	229
Interaction between Auxin and Ethylene	235

Ethylene and Apical Dominance	238
Inhibition of Root Growth and Role in Root Gravitropism	239
Role in Emergence of Dicot Seedlings	240
Role in Abscission	242
Effects of Ethylene on Planes of Cell Expansion	244
Other Effects of Ethylene	244
Ethylene Biosynthesis and Mechanism of Action	248
Ethylene Receptor	249
References	250
 CHAPTER 7 BRASSINOSTEROIDS	 255
Introduction	255
Brief History of Discovery	255
Chemistry of BRs	256
Natural Occurrence of BRs	256
Biological Effects	260
Effects on Nucleic Acid and Protein Metabolism	263
Practical Applications in Agriculture	263
Some Problems and Prospects	264
References	264
 CHAPTER 8 PHYTOCHROME	 267
Introduction	267
History of Discovery and Modern Description	267
Sequence Analysis of Phytochrome	275
Occurrence, Distribution, and Intracellular Localization	278
Induction-Reversion versus High Irradiance Responses	280
Non-Phytochrome-Mediated Photoresponses to Blue Light	281
Introduction to Mechanism of Phytochrome Action	283
Phytochrome Action in Nonphotoperiodic Photoresponses	284
Phytochrome and Photoperiodic (Flowering) Responses	293
Calcium Messenger System in Plants	308
References	312
 Index	 321
