#### ABSTRACT

This report is designed to pull together the data that are available on the status of blacks in undergraduate education for use in initiating methods to improve the allocation of human resources in science and engineering in the United States. The listings and tabulations used data from the CASPAR data base and the High School and Beyond Transcript Data. Following an introduction in Chapter I, Chapter II examines the first transition point, from high school to college, noting low levels of college enrollment among blacks, high interest in science and engineering among those who do enroll, and lack of resources to complete the bachelors degree. Chapter III on the undergraduate education process, indicates that many black students interested in science and engineering drop out, and that faculty have a role in influencing decisions to complete the bachelors degree and to continue education at the graduate level. Chapter IV is on degree awards and shows trends in the proportion of black graduates in science and engineering. The final section, Chapter V, examines the undergraduate origins of black science and engineering doctoral recipients. Included are a total of 26 tables. (JB)

### Acknowledgments

This report was prepared with the assistance of many. It was prepared under the guidance of Mary Golladay, Program Director, Science and Engineering Education and Human Resources Program, Division of Science Resources Studies (SRS). The listings of institutions ranked by degree awards to blacks were tabulated from the CASPAR data base by Quantum Research Corportion. Paula Knepper, National Center for Education Statistics, kindly ran a special tabulation of High School and Beyond Transcript Data. The manuscript was processed by Sylvie Warren and Susan Hein, WESTAT, Inc., and by Simone Keith, SRS. Editing was provided by Nita Congress.

The SRS gratefully acknowledges the persons who reviewed the draft manuscript of this report: Reynolds Farley, Population Studies Center of the University of Michigan; Franklin Hamilton, Florida A&M University; William Trent, University of Illinois at Urbana-Champaign; and William McHenry, National Science Foundation, Directorate for Education and Human Resources.

### Foreword

It is widely recognized that blacks are underrepresented in science and engineering, from grade school to graduate school. Very little current information is readily available on the status of blacks in undergraduate education. This report is designed to pull together the data that are available and present them to policymakers for use in initiating methods to improve the allocation of human resources in science and engineering in this country.

A workshop on "Blacks in American Science" documented the changing participation of blacks and explored ways of increasing that participation. The workshop was held from June 30 to July 1, 1990, in Winston-Salem, North Carolina; it was hosted by Dr. Willie Pearson, Jr., Wake Forest University; and Dr. Earl Smith, Washington State University. This report is derived from a presentation by Susan T. Hill on "Blacks in Undergraduate Science and Engineering Education."

## I. Introduction

The National Science Foundation's (NSFs) mandate to ensure the vitality of the Nation's scientific enterprise includes the responsibility for the development of human resources in science and engineering (S&E). The competitiveness of this Nation is dependent upon colleges and universities that produce the intellectual resources and new knowledge to strengthen the ability of all talented persons to participate in science and engineering. The current underrepresentation of black Americans in S&E is reflected by the small numbers who participate in and emerge from the educational pipeline leading to careers in these fields. This report was developed to provide data on the status of black participation in collegiate S&E education. Data collected during many surveys conducted by both Federal and non-Federal sources were used in the preparation of this report (see Appendix A for detailed descriptions).

It is recognized that participation in undergraduate S&E education has its foundations, to a large extent, in precollege educational experiences—the interest, preparation, and counseling received in elementary and secondary schools. Black students express interest in S&E careers, but often their preparation for studies in these fields is lacking. Insufficient preparation at the elementary and secondary levels is reflected in a large gap in test scores of black and white students, although a recent report indicates that black students are slowly increasing their proficiency in both mathematics and science. Another sign of progress is found in the scores on the mathematics portion of the Scholastic Achievement Tests (SATs). The average score among black college-bound seniors increased 26 points from 1980 to 1989, compared with a 9-point increase for whites; however, the gap between black and white average test scores remains large (105 points difference in 1989).<sup>2</sup>

What happens to black students who enroll in college, planning to major in an S&E field? Overview data indicate that there are large losses between the freshman year and college graduation for blacks, especially among black women (table 1). Additional information is presented herein that indicates the major leaks from the education pipeline--points where intervention strategies might be targeted.

In the next section of the report the first transition point--from high school to college--is examined. Although preparation for college is slowly improving for black students, the percent of high school graduates who enroll in college has not increased. Those black students who do

U.S. Department of Education, National Center for Education Statistics, Digest of Education Statistics, 1990 (Washington, D.C.: U.S. Government Printing Office, 1991), p. 123.

go on to college, however, express a higher level of interest in majoring in an S&E field than do white freshmen, but blacks have fewer resources for successful completion of a baccalaureate.

The section on the undergraduate education process indicates that many black students interested in an S&E major drop out. Longitudinal studies reveal that there is severe attrition among blacks during undergraduate education, and that half of it occurs during the first year of college. In many universities, entry level classes are viewed as "filters," but some institutions have modified them to retain qualified students.<sup>3</sup>

Baccalaureate completion rates of blacks are half that of whites, regardless of type of institution attended. Although the decision to complete the baccalaureate and enter graduate school is influenced by a variety of persons or events, most scientists report that a faculty member influenced their decision in some manner. <sup>4</sup> This is an especially important role for all faculty to play for black undergraduates, since the number of black faculty in S&E is negligible.

The section on degree awards shows that the reasons for the low proportion of black graduates in S&E are changing. Sue Berryman found in the 1983 report Who Will Do Science? that the major reason for the underrepresentation of blacks in science and engineering in the 1970s was that they chose non-quantitative fields. More recent data for the 1980s indicate that field choices for bachelor's degrees were becoming more similar for blacks and whites. In light of these findings, field choice, although still a factor, is not the major factor in the underrepresentation of blacks in undergraduate science and engineering by the late 1980s. Attrition of blacks from the S&E pipeline may be the primary barrier to increased representation.

Black bachelor's degree recipients graduate from different types of institutions than do whites. Research-intensive institutions have a lower proportion of black S&E graduates than do institutions that are not research-intensive. About a third of black S&E graduates come from the Historically Black Colleges and Universities (HBCUs). These institutions play an important role in the production of black S&E baccalaureates recipients, and they serve as an important

Sue E. Berryman, who will Do Science? (New York: Rockefeller Foundation, 1983), p. 5.

source of black students who go on to graduate work and a doctorate.

In the final section of this report the undergraduate origins of black S&E doctorate recipients are examined. Almost 3 out of 10 recent black doctorate recipients in S&E fields earned their baccalaureate at an HBCU. Again, black doctorate recipients were less likely than their white counterparts to have their undergraduate origins in research-intensive universities.

Reflected in this report are indications of changes already taking place; in some cases S&E participation rates of blacks have risen, whereas in others, historically low participation rates have exhibited further declines. Overall, the data in this report indicate some points where intervention strategies might be useful—where institutions and national programs could facilitate the retention of black undergraduate students in science and engineering.

NSF has launched several initiatives to address the issue of low retention of students (minorities as well as other students) in undergraduate S&E education; a key aspect of the Foundation's approach to educational improvements is the development of coalitions.<sup>6</sup> For example, NSF instituted a new program designed to create partnerships—between education and industry and between colleges and high schools—needed to address special issues invoived in retaining minority students in S&E fields. The Alliances for Minority Participation (AMP) program promotes retention of minority students throughout the undergraduate years as well as during the transitions from high school to college and graduate studies.<sup>7</sup>

In addition, the NSF Research Careers for Minority Scholars program places highest priority on projects that enhance minority students' chances of remaining in the S&E pipeline. It is designed to assist colleges and universities in providing comprehensive research and academic enrichment programs for minority undergraduate and graduate S&E students. Another program, Research Experiences for Undergraduates, is an attempt to increase for all undergraduates hands-on research in academic and industrial laboratories. Blacks constituted 4-6 percent of the undergraduates who participated in this program in its first three years (1987-89); they were more likely than their nonblack peers to indicate that their participation would

help clarify educational and career plans.9

In the area of undergraduate education, the goal of NSF is to increase the number of minorities earning bachelor's degrees in science and engineering fields by the year 2000. A special report on Minorities in Science states that "to meet these goals, the alliances are going to have to dramatically plug some important leaks in the pipeline that produces science and engineering professionals." This report provides useful information to those joined in this effort.

Black representation at the beginning and the end of science and engineering (S&E) education, by sex

SOURCES: University of California-Los Angeles/Cooperative Institutional Research Program, American Freshman National Norms; and U.S. Department of Education/National Center for Education Statistics, Completions Survey

The representation of blacks among freshmen at 4-year colleges interested in majoring in an S&E field is high, but black representation among actual bachelor's degree recipients in S&E fields is low. The representation c: blacks among S&E baccalaureate recipients was just over half of their representation among freshmen who planned to major in an S&E field.

Chart 4.

Resource differences of black and white full-time freshmen in 4-year institutions: 1987

SOURCE: University of California-Los Angeles/Cooperative Institutional Research Program, American Freshman National Norms

Once on campus, black freshmen in 4-year colleges have fewer parental resources than majority students. Over half of black freshmen are first-generation college students, and almost 40 percent have parents who earned less than \$20,000 annually. Almost half took out loans to pay for the cost of their first year of education, and one-fifth had major concerns about how they would pay for their college education.

Black representation among full-time freshmen in 4-year institutions, by sex and intended science and engineering (S&E) major: 1987

NOTE: The broken black vertical lines indicate black representation among

all Full-time freshmen in 4-year institutions.

SOURCE: University of California-Los Angeles/Cooperative Institutional

Research Program, American Freshman National Norms

The representation of blacks among male freshmen intending to major in an S&E field was similar to their representation on 4-year college campuses. Blacks had a higher representation among female freshmen intending to major in an S&E field, due primarily to their proportions in two fields: blacks consisted of one-fifth of the women intending to major in engineering and one-third of the women whose intended major was computer science.

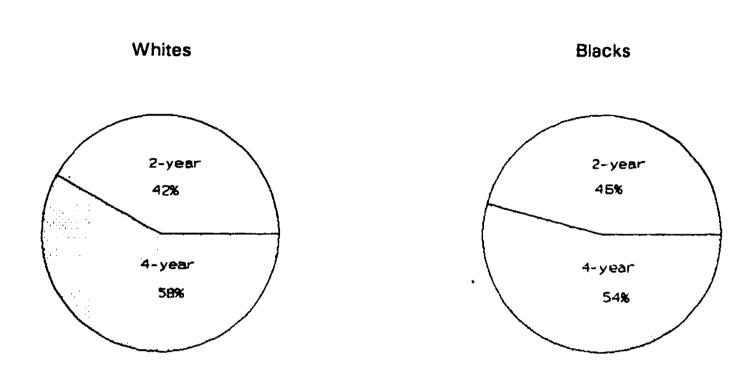

Table 6. Undergraduate enrollment of whites and blacks in institutions of higher education, by level of institution: 1978-88, alternate years

Chart 6.
Undergraduate enrollment of white and black students in 2-year and 4-year institutions: 1988

SOURCE: U.S. Department of Education/National Center for Education Statistics, Fall Enrollment Surveys

Of the more than 1 million black undergraduates enrolled in higher education in 1988, 46 percent were enrolled in 2-year colleges and 54 percent in 4-year colleges. White undergraduates were slightly more likely to attend a 4-year institution than were blacks.

Chart 9.

Percent of 1980 high school graduates who entered higher education immediately and indicated a science or engineering major, by highest level completed within 4.5 years after high school graduation, for blacks and whites

SOURCE: U.S. Department of Education/National Center for Education Statistics, High School and Beyond Survey

Among those students who entered college in fall 1980 immediately after high school and intended to major in a science or engineering field, 16 percent of blacks and 34 percent of whites had completed their bachelor's degrees 4.5 years later. The percent that completed less than 1 year of study was twice as high for blacks as for whites.

Table 10. Highest level of education attained by black and white 1980 high school seniors, by October 1980 postsecondary education attendance status: spring 1986

Chart 10.

Percent of 1980 black and white high school seniors who earned bachelor's degrees by 1986, by type of institution attended in 1980

\*Of students enrolled full time in 1980 in public 2-year institutions, 38 percent of blacks and 32 percent of whites earned associate degrees or licenses/certificates and did not go on to earn baccalaureates by 1986.

NOTE:

Includes only those 1980 high school seniors who enrolled full time

in Higher education by October 1980.

SOURCE:

U.S. Department of Education/National Center for Education

Statistics, High School and Beyond Survey

Six years after entering college, the percent of blacks who earned bachelor's degrees was about half that of whites, regardless of the type of institution first attended. Among those blacks who started college at a public 2-year college, about 1 out of 10 went on to earn a bachelor's degree.

Chart 11.

Percent change in bachelor's degrees awarded to blacks, by science and engineering field: 1977 to 1989

\*Includes engineering technology.

NOTE: Large percent changes may reflect small numerical changes; see table for

actual numbers.

SOURCE: U.S. Department of Education/National Center for Education

Statistics, Earned Degrees and Completions Surveys

Although the total number of bachelor's degrees earned by blacks declined from 1977 to 1989, large percentage increases occurred in baccalaureates awarded in engineering and computer science. Degrees earned by blacks in social science and psychology declined in this period.

Table 12. Number of bachelor's degrees awarded to black and white men, by science and engineering field: 1977-89, selected years

U.S. Department of Education/National Center for Education

Statistics, Earned Degrees and Completions Surveys

Overall, the number of bachelor's degrees awarded to black men declined from 1977 to 1989; specifically, declines occurred in five of the eight S&E fields. Significant increases occurred only in the fields of computer science and engineering among black men.

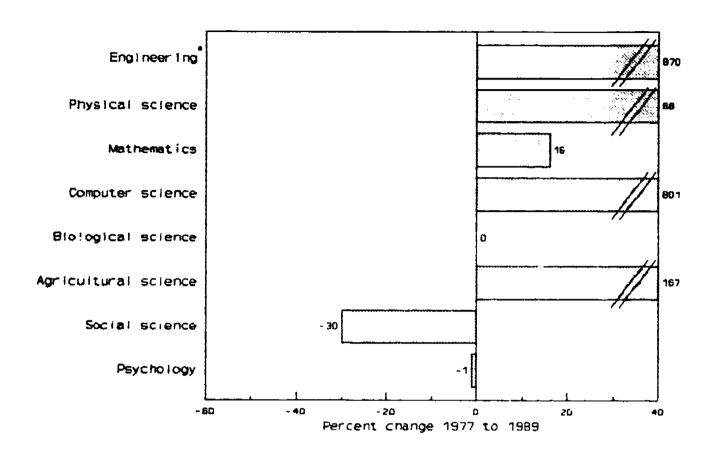

Table 13. Number of bachelor's degrees awarded to black and white women, by science and engineering field: 1977-89, selected years

Chart 13.

Percent change in bachelor's degrees awarded to black women, by science and engineering (S&E) field: 1977 to 1989

\*Includes engineering technology.

NOTE:

Large percent changes may reflect small numerical changes; see tables for

actual numbers.

SOURCE:

U.S. Department of Education/National Center for Education

Statistics, Earned Degrees and Completions Surveys

Overall, the number of bachelor's degrees awarded to black women was about the same in both 1977 and 1989. The number increased in five of the eight S&E fields; however, especially in computer science, engineering, and physical science.

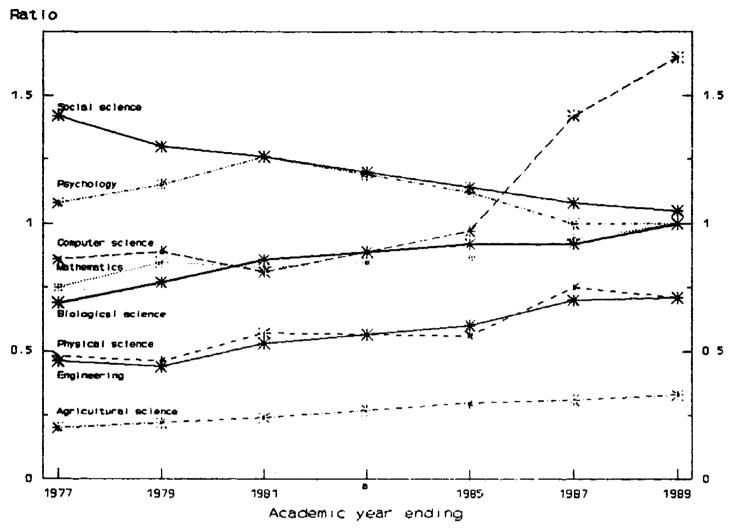

Table 14. Percent distribution of bachelor's degrees awarded to blacks and whites, by science and engineering field: 1977-89, selected years

Chart 14.

Ratio of baccalaureate field choice of blacks to whites, by science and engineering field: 1977-89, selected years

\*Data are not available for 1983; these points are the midpoints between the 1981 and 1985 data.

NOTE:

This ratio is calculated by dividing the percent of blacks who majored in a field by the percent of whites who majored in that field. The closer the ratio is to 1, the more similar are the field choices of blacks and whites.

SOURCE:

U.S. Department of Education/National Center for Education Statistics, Earned Degrees and Completions Surveys

In general, choices of field of study became more similar among black and white baccalaureate recipients between 1977 and 1989. The major differences between the two groups were that a higher proportion of blacks majored in computer science, and a lower proportion majored in agricultural science.

Statistics, Earned Degrees and Completions Surveys

Among black and white male bachelor's degree recipients, the differences in field choices in the natural sciences and engineering did not change much from 1977 to 1989. The proportions of black and white men choosing social science or psychology, however, became more similar during this time.

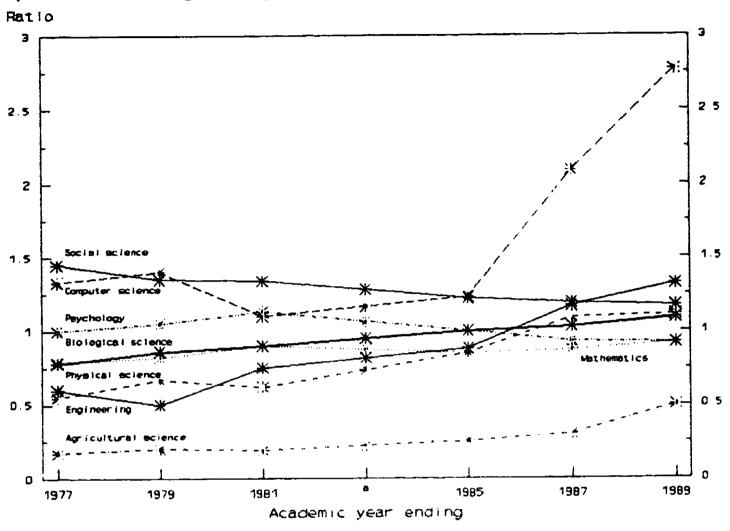

Table 16. Percent distribution of earned bachelor's degrees awarded to black and white women, by science and engineering field: 1977-89, selected years

Chart 16.
Ratio of baccalaureate field choice of black women to white women, by science and engineering (S&E) field: 1977-89, selected years

\*Data are not available for 1983; these points are the midpoints between the 1981 and 1985 data.

NOTE: This ratio is calculated by dividing the percent of blacks in a given

field by the percent of whites in that field. The closer the ratio is to

1, the more similar are the field choices of blacks and whites.

SOURCE: U.S. Department of Education/National Center for Education

Statistics, Earned Degrees and Completions Surveys

For all S&E fields, the differences in field choices among black and white female bachelor's degree recipients in 1977 had almost disappeared by 1989. The only disparities remaining in the choices of the two groups were that a lower proportion of black women than of white women majored in agriculture and a much higher proportion majored in computer science.

Chart 17.

Distribution of bachelor's degrees in the natural sciences and engineering awarded to blacks and whites, by Carnegie classification of higher education institution: 1987

SOURCE: U.S. Department of Education/National Center for Education Statistics

Black recipients of baccalaureates in the natural sciences and engineering were more likely to earn their degrees at comprehensive universities (i.e., the 600 institutions that offer liberal arts and specialized programs in business, engineering, etc., but have limited master's degree programs) than at other types of institutions. Whites were more likely to earn their baccalaureates at research-intensive universities or liberal arts colleges.

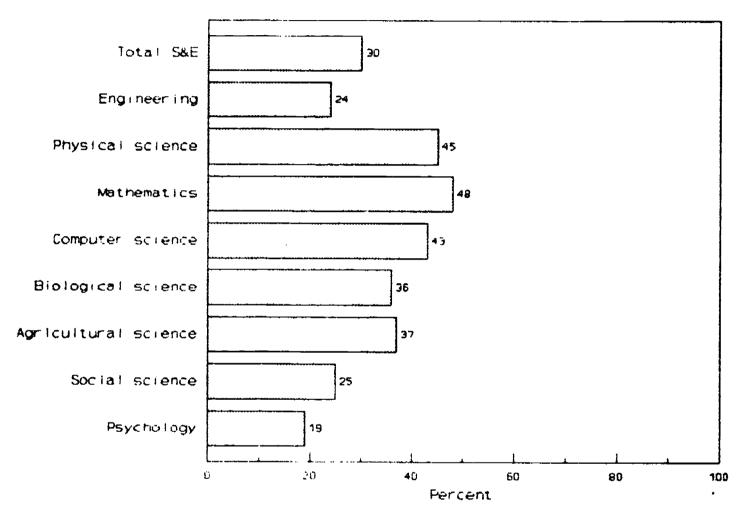

Table 18. Bachetor's degrees awarded to blacks by historically black colleges and universities (HBCUs), by science and engineering field: 1989

	Number of institutions		Number of degrees awarded

B. Bachelor's Degrees Awarded to Blacks in Science and Engineering Fields, by Institution: 1977-89

NOTE:

Similar tables for each of the major fields of science and for engineering are also available from the author upon request.

### Appendix A. Sources of Data

The information in this report was obtained from many sources, primarily Federal agencies. The data were collected using several research methods including surveys of a universe (such as all colleges) or of a sample. Because of differences in procedures, timing, phrasing of questions, and interviewer training, results from the different sources are not strictly comparable. Users should take particular care when comparing data from different sources. Following are descriptions of the information sources and data collection methods, grouped by sponsoring organizations. NSF may be considered the source for the data tabulations in this report unless the title of a book is provided in the table source citation.

### a. Federal Agency Sources

### U.S. Bureau of the Census

### Current Population Survey (CPS)

Current estimates of school enrollment and social and economic characteristics of students are based on data collected in the Census Bureau's monthly survey of about 60,000 households, the CPS. The CPS consists of 729 sample areas comprising 1,973 counties, independent cities, and minor civil divisions throughout the 50 states and the District of Columbia. The current sample was selected from 1980 Census files and is updated periodically to reflect new housing construction.

The primary function of the monthly CPS is to collect data on labor force participation of the civilian noninstitutional population (the survey excludes military personnel and inmates of institutions). In October of each year, however, the CPS asks questions on school enrollment by grade and other school characteristics about each member of the household.

The estimation procedure used for the monthly CPS data involves inflating weighted sample results to independent estimates for the total civilian noninstitutional population by age, sex, race, and Hispanic origin. These independent estimates are derived from decennial census statistics of the population: Statistics on births, deaths, and immigration and emigration; and statistics on the strength of the Armed Forces. Generalized standard error tables are provided in the Current Population Reports (CPRs). The data are subject to both nonsampling and sampling errors.

### Integrated Postsecondary Education Data Systems (IPEDS)

The IPEDS is a survey of all postsecondary institutions, including universities and colleges as well as institutions offering technical vocational education beyond the high school level. This survey, which was initiated in 1986, replaces the Higher Education General Information Survey (HEGIS).

IPEDS components are institutional characteristics, including institutional activity; fall enrollment, including age and residence; fall enrollment in occupationally specific programs; completions; finance; staff; salaries of full-time instructional faculty; and academic libraries. The higher education portion of this survey is a census of all education institutions.

### Higher Education General Information Survey (HEGIS)

This survey was a coordinated effort administered by the National Center for Education Statistics (NCES), which acquired and maintained statistical data on the characteristics and operations of institutions of higher education. Implemented in 1966, HEGIS was an annual universe survey of institutions listed in the latest NCES Education Directory. Colleges and Universities. It has since been replaced by the IPEDS (see above).

Opening Fall Enrollment in Colleges and Universities. This survey was part of the HEGIS series, and its response rate was always relatively high, e.g. 92 percent in 1985. Major sources of nonsampling error for this survey were classification problems, the unavailability of needed data, interpretation of definitions, the survey due date, and operational errors.

Earned Degrees Conferred. This survey was always part of the HEGIS series. The degree classification taxonomy, however, was revised in academic years 1970/71 through 1982/83. Although information from survey years 1970/71 through 1981/83 is directly comparable, the 1982/83 classification was used on tables with trends on degrees up to 1989 in order to provide consistent data for the entire period. Nonresponse did not appear to be a significiant source of nonsampling error for this survey. The return rate over the years was extremely high, with the response rate for the 1983/84 survey at 95 percent. Nonsampling error caused by imputation was also minimal for all degree recipients, but may have had a greater effect on the data for racial/ethnic minorities after 1980/81 because the imputation method was changed each year.

The major sources of nonsampling error for this survey were differences between the HEGIS program taxonomy and taxonomies used by the colleges, classification of double majors and double degrees, operational problems, and survey timing. In the 1979 validation study these sources of nonsampling error were found to contribute to an error rate of 0.3

68

percent overreporting of bachelor's degrees and 1.3 percent overreporting of master's degrees. The differences, however, varied greatly among fields. No errors were identified in over 50 percent of the fields selected for the validation study. Categories of fields in which significant differences occurred were business and management, education, engineering, letters and psychology. It was also shown that differences in proportion to the published figures were less than 1 percent for most of the selected fields in which some errors had been identified.

Beginning with the 1986/87 academic year, the IPEDS Completions Survey replaced the HEGIS Earned Degrees Conferred survey. There were no imputations for nonresponse for race/ethnicity in the Completions Survey in 1987 or 1989.

Questions concerning HEGIS/IPEDS can be directed to -

Postsecondary Education Statistics Division National Center for Education Statistics 555 New Jersey Avenue, N.W. Washington, D.C. 20208

### National Survey of Postsecondary Faculty (NSOPF-88)

The NSOPF was a comprehensive survey of higher education instructional faculty conducted in the fall of 1987. It was the first such survey conducted after 1963. It gathered information regarding the backgrounds, responsibilities, workloads, salaries, benefits, and attitudes of both full- and part-time instructional faculty in 2- and 4-year institutions under both public and private control. In addition, information was gathered from institutional and department-level respondents on such issues as faculty composition, new hires, departures and recruitment, retention, and tenure policies.

The study comprised three major parts: (1) A survey of institutional-level respondents at a stratified random sample of 480 U.S. colleges and universities; (2) a survey of a stratified random sample of 3,029 eligible department chairpersons (or their equivalent) within the participating 4-year institutions; and (3) a survey of a stratified random sample of 11,013 eligible faculty members within the participating institutions. Response rates to the three surveys were 88 percent, 80 percent, and 76 percent, respectively.

The universe of institutions from which the sample was selected consisted of all accredited nonproprietary U.S. postsecondary institutions that granted a 2-year or higher degree and the accreditation of which at the higher education level was recognized by the U.S. Department of Education. This included religious, medical, and other specialized postsecondary institutions. According to the 1987 IPEDS, the universe comprised 3,159 institutions. The universe did not include proprietary 2- and 4-year institutions or less than 2-year postsecondary institutions.

Further information on this survey may be obtained from --

### National Longitudinal Study of the High School Class of 1972 (NLS-72)

The NLS-72 was the first of a series of ongoing national longitudinal studies conducted by NCES. In this study comprehensive base year data were collected from a nationally representative sample of high school seniors in the spring of 1972, prior to high school graduation. These students were contacted again in October 1973 through April 1974, October 1974 through April 1975, October 1976 through April 1977, October 1979 through May 1980, and most recently, May through September 1986.

In addition to these five followup studies, the Postsecondary Education Transcript Study (PETS) was conducted in 1984. At that time all transcripts were requested for students who had indicated in one or more of the first four followup studies that they had received some postsecondary education.

Information concerning study design, variable definitions, nonresponse rates, and other technical information for the student surveys can be found in the National Longitudinal Study: Base Year through Fourth Follow-up (1979) Data Users Manual. Similar information concerning PETS data can be found in the National Longitudinal Study of the High School Class of 1972 Postsecondary Education Transcript Study Data File User's Manual and in the Addendum to NLS-72 Postsecondary Education Transcript File Data User's Manual for Revised and Reduced Student, Transcript, Term, and Course Files.

## High School and Beyond (1980 Seniors) (HS&B)

HS&B is the second longitudinal study conducted by NCES. This study, which was initiated in 1980, included two high school cohorts—the graduating class of 1980 (the senior cohort), and the graduating class of 1982 beginning in 1980 when the students were sophomores (the sophomore cohor). The tables in this *Undergraduate Education* report are based on data from the senior cohort surveys. These students were re-surveyed an additional three times: in March through July of 1982, 1984, and 1986.

In addition to these three followup studies, a number of supplemental data-collection efforts have been undertaken. As with the NLS-72 cohort, one of these supplemental studies involved the collection of postsecondary transcripts. This effort was somewhat more limited, however, in that transcripts were collected for all students who indicated any postsecondary education in either of the first two followups or within 4 years of initial contact. These transcripts covered the first 4.5 years of postsecondary enrollment.

Information concerning study design, variable definitions, nonresponse rates, and other technical information about the student surveys can be found in <u>High School and Beyond 1980 Senior Cohort Third Follow-up (1986) Data File User's Manual, Volumes I and II.</u> Similar information concerning transcript data can be found in <u>High School and Beyond Postsecondary Education Transcripts Study Data File User's Manual.</u>

Postsecondary Education Statistics Division National Center for Education Statistics 555 New Jersey Avenue, N.W. Washington, D. C. 20208

### Postsecondary Education Transcript Studies (PETS)

Estimates in the tables of this report are based on information from transcripts for 7,807 students in the NLS-72 cohort who had transcript information indicating some postsecondary education attendance prior to January 1973 (those who first entered advanced education in the year of high school graduate) and/for 5,164 students in the HS&B senior cohort who first entered postsecondary education January 1981. Only data through December 1977 were used to calculate level attained or length of time needed to complete any level for the NLS-72 cohort, because this was equivalent to what was available for the HS&B-80 senior cohort. No self-reported information on postsecondary education attendance was used. Because the study was limited to information available in transcripts, estimates of total participation in postsecondary education may vary somewhat from similar self-reported figures.

Given the nature of college transcripts, many inconsistencies exist in the data that may affect the estimates reported. Missing term and degree completion dates or missing transcripts affected about the same proportion of students in both 1972 and 1980 cohorts (slightly over 20 percent). Because both sets of transcripts were collected and coded at the same time, problems were dealt with consistently in both cohorts.

For more information about the estimates or the NLS or HS&B data bases, contact --

### National Science Foundation Division of Science Resources Studies

#### New Entrants Survey

The 1988 New Entrants Survey provides data on the demographic, education, and employment characteristics of recent college graduates in science and engineering (S&E) fields. These data include estimates of the recent S&E bachelor's and master's degree recipients who have entered the labor force, and thus are a new component of the Nation's population of scientists and engineers.

A national sample of recent college graduates was drawn for each of two periods-those graduating between July 1, 1985, and June 30, 1986 (1986 graduating class), and those graduating between July 1, 1986, and June 30, 1987 (1987 graduating class).

A two-stage probability sample of graduates was employed for this study. In the first stage, 274 universities and colleges were selected as the primary sampling units (PSUs). (A special stratum of predominately minority universities was also assembled; six predominately black universities and three Hispanic PSUs were selected with probabilities proportional to measures of size.)

The second stage of the sample involved the selection of graduates within PSUs. The sampling frame consisted of lists of graduates supplied by the universities chosen in the first stage sample. The lists generally included data on degree received, major field of study, year of graduate, and mailing address. Within Hispanic PSUs, all students were oversampled by a factor of two. Similarly, all students within black PSUs were also oversampled by a factor of two.

In terms of all individuals for whom a usable address was obtained and who were eligible to participate (i.e., those who received either a bachelor's or master's degree in an S&E field in either 1986 or 1987), the survey achieved an unweighted return rate of 77.5 percent. Generalized standard errors for the reported S&E fields and definitions are provided in *Characteristics of Recent Science and Engineering Graduates:* 1988, National Science Foundation. NSF 90-305.

Division of Science Resources Studies National Science Foundation 1800 G Street, N.W., Room L-609 Washington, D. C. 20550

#### Survey of Earned Doctorates (SED)

The SED has been conducted since 1958 by the National Academy of Sciences, National Research Council (under contract for the National Science Foundation), and four other Federal agencies. Information from this survey becomes part of the Doctorate Records File, which includes about 950,000 records for doctorates awarded since 1920. (The file contains only name, gender, field, and doctorate institution for recipients from 1920 to 1957.)

SED forms are distributed to all regionally accredited universities in the United States and its territories that confer research doctorates. In 1988, there were 358 such institutions. The forms are collected, in cooperation with the Graduate Deans, directly from the individuals who have completed requirements for a research doctorate. Research doctorate degrees such as the Ph.D., Ed.D., or D.Sc. are included in the survey, but nonresearch doctorates and first-professional degrees (such as the J.D. or M.D.) are not. The data for a given year include the research doctorates awarded in the 12-month period ending June 30 of that year.

Research doctorate recipients are asked to provide educational history and demographic information. Approximately 93 to 95 percent or higher of the annual cohorts of doctorate recipients responded to the questionnaire between 1986 and 1988. For nonrespondents, partial data (on degree, field, gender of recipients, and baccalaureate institution) taken from public sources such as commencement programs, are added to the file. Estimations are not made for other missing data. Approximately 2 percent of respondents did not provide information on their race or baccalaureate-origin institution.

Further information on S&E doctorates may be obtained from NSF by contacting --

Division of Science Resources Studies National Science Foundation 1800 G Street, N.W., Room L-609 Washington, D. C. 20550

Further information on doctorates in all fields can be obtained from the Summary Report: Doctorate Recipients from United States Universities, various years, published by the National Research Council, or by contacting --

Office of Scientific and Engineering Personnel National Research Council, Room 412GN 2101 Constitution Avenue, N.W. Washington, D. C. 20418

#### American Freshman National Norms

The Cooperative Institutional Research Program at the University of California-Los Angeles collects data annually on freshman. The survey data are weighted to provide a normative picture of the American college freshman population for persons engaged in policy analysis, human resource planning, campus administration, educational research, guidance and counseling, as well as for the general community of students and parents. The survey instrument, the Student Information Form (SIF), is revised annually to reflect the changing concerns of the academic community and of others who use the information. Beginning in 1972, all institutions that have entering freshman classes and that respond to the U.S. Department of Education's Higher Education General Information Survey (now IPEDS) were invited to participate. The responses are therefore a self-selecting sample.

Although almost 300,000 entering freshmen at nearly 600 colleges and universities returned their forms in time for their data to be considered for inclusion, the normative data are based on responses from only approximately 200,000 freshmen who had entered 40, 2-and 4-year institutions. The national norms are based only on data from institutions for which the coverage of entering freshmen was judged to be representative. This judgment is based on the percentage of first-time, full-time freshmen who completed the SIF and on whether the forms were handed out for completed and return during registration, freshman orientation, or the first few weeks of classes. Four-year colleges are included in the national norms if over 85 percent of their first-time, full-time freshmen completed the form; universities must have over 75 percent participation, while 2-year colleges must have 50 percent.

The SIF is designed to elicit a wide range of biographic and demographic data, as well as data on the student's high school background, career plans, educational aspirations, financial arrangements, high school activities, and current attitudes. Those data meeting minimal quality requirements for inclusion in the norms were differentially weighted to represent the population of entering freshmen at all higher educational institutions in the United States. Part-time students and those who are not first-time colleges students (i.e., transfers and former enrollees) were excluded from the normative sample.

Further information on this survey may be obtained by contacting --

Carnegie Foundation
Carnegie Classification of Higher Education Institutions

The classification system for institutions used in this report was modified from the 1987 Carnegie classification. The 1987 Carnegie classification includes all colleges and universities in the United States listed in the 1985-86 Higher Education General Information Survey of Institutional Characteristics.

It groups institutions into categories on the basis of the level of degree offered-ranging from prebaccalaureate to the doctorate--and the comprehensiveness of their missions. Five types of institutions were identified in accordance with this classification.

Research-Intensive Universities: These are the 70 leading universities in terms of Federal financial support of research and development in at least two of three academic years (1982/83, 1983/84, and 1984/85), provided they awarded at least 50 doctorates in 1983/84. Examples include University of California at Berkeley, the University of Texas at Austin, Duke University (NC), and the University of Chicago (IL).

Other Doctorate-Granting Universities: Besides the research-intensive universities, there are other major doctorate-granting institutions, classified by Carnegie in the categories of Research Universities II, Doctorate-Granting I, and Doctorate-Granting II. These institutions have established doctoral programs that awarded at least 20 Ph.D.'s in any field, or 10 Ph.D.'s in three or more fields, in 1983/84. Examples of such universities include Iowa State University, University of South Florida, Howard University (DC), and Rensselaer Polytechnic Institute (NY).

Comprehensive Institutions: These are institutions that offered a liberal arts program as well as other programs such as engineering, business administration, and nursing. Many comprehensive institutions offered master's degrees, but all either lacked a doctoral program or the program was extremely limited. Former teachers colleges that broadened their curricula in the 1960s are included in this category. Examples of comprehensive institutions include Glassboro State College (NJ), Old Dominion University (VA), Creighton University (NE), and Aquinas College (MI).

<u>Liberal Arts Colleges</u>: These are predominantly bachelor's-degree-granting institutions that award more than half their degrees in liberal arts. Institutions such as Oberlin College are included, even though they have master's degree programs. This category also includes a

group of colleges that awarded less than half their degrees in liberal arts fields, but were too small (i.e., less than 1,500 students) to be considered comprehensive. Examples of colleges in this category include Reed College (OR), Bryn Mawr College (PA), the College of Charleston (SC), and Fisk University (TN).

<u>Specialized Institutions</u>: Specialized institutions are those with a primary focus on technical, professional, or corporate programs in a range of areas such as theology, medicine, engineering, business, art, music, law, and teaching. Examples of specialized institutions include the New Jersey Institute of Technology, the Princeton Theological Seminary (NJ), the University of Oklahoma Health Science Center, and the Teacher's College of Columbia (NY).

Table A. Institutional categories derived from the 1987 Carnegie classification system

Modified classification	Carnegie codes	Number in group	Number awarding S&E baccalaureates
Research-intensive	1.1	70	70
Other doctorate- granting	1.2- 1.4	143	138
Comprehensive	2.1-2.2	601	568
Liberal arts	3.1- 3.2	564	518
Specialized	5.1 <del>-</del> 5.9	643	177

NOTE: Excludes institutions that did not award bachelor's or higher level degrees.

SOURCE: Carnegie Foundation. See the Chronicle of Higher Education, "Carnegie Foundation's Classifications of More Than 3,300 Institutions of Higher Education," July 8, 1987, pp. 22-30, to determine an institution's classification.

NOTES: Data for 1983 were not completely processed by the National Center for Education Statistics (NCES).

Science and engineering fields are defined as the natural sciences (physical science, mathematical science, computer science, biological science, and agricultural science), the social sciences (psychology and social science), and engineering (engineering technologies are included in 1977 through 1981).

Zero means either that no degrees were awarded to blacks or that an institution failed to report any racial/ethnic data.

An institution name followed by an "(H)" indicates an historically black college or university.

# STIS

#### What is STIS?

STIS is an electronic dissemination system that provides fast, easy access to National Science Foundation (NSF) publications. There is no cost to you except for possible long-distance phone charges. The service is available 24 hours a day, except for maintenance periods.

#### What Publications are Available?

Publications currently available include:

- · The NSF Bulletin
- · Program announcements and "Dear Colleague" letters
- · General publications and reports
- NSF Directions
- · Press releases
- NSF organization charts and phone books
- NSF vacancy announcements
- Award abstracts (1989—now)

The goal is for all printed publications to be available electronically.

### **Access Methods**

There are four ways to access STIS. Choose the method that meets your needs and the communication facilities you have available.

Electronic Documents Vin E-Mail. If you can send E-mail to Internet or BITNET addresses you can send a specially formatted message, and the document you request will be automatically returned to you via E-mail.

Anonymous FTP. Internet users who are familiar with this file transfer method can quickly and easily transfer STIS documents to their local system for browsing and printing.

On-Line STIS. If you have a VT100 emulator and an Internet connection or a modern, you can log on to the on-line system. The on-line system features full-text search and retrieval software to help you locate the documents and award abstracts that are of interest to you. Once you locate a document, you can browse through it on-line or download it using the Kermit protocol or request that it be mailed to you.

Direct E-Mail. You can request that STIS E-mail you an electronic copy of every document that is added to the system. This is particularly effective for periodic and time-sensitive publications such as the *Bulletin*.

### Getting Started With Documents Via E-Mail

Send a message to stleserv@nef.gov (Internet) or stisserv@NSF (BITNET). The text of the message should be as follows (the Subject line is ignored):

Request: stis Topic: index

You will receive a list of all the documents on STIS and instructions for retrieving them. Please note that all requests for electronic documents should be sent to stisserv, as shown above. Requests for printed publications should be sent to pubs@nsf.gov (Internet) or pubs@NSF (BITNET), and include the document name, number, and your postal address.

### Getting Started with Anonymous FTP

FTP to stis.nsf.gov. If you cannot connect, try 128.150.195.40. Enter anonymous for the username, and your E-mail address for the password.

Retrieve the file fipindex. This contains a list of the files available on STIS and additional instructions.

### Getting Started with the On-Line System

If you are on the Internet: telnet stis.nsf.gov. If you cannot connect, try telnet 128.150.195.40. At the login prompt, enter public.

If you are dialing in with a modem: Choose 1200, 2400, or 9600 band, 7-E-1. Dial 202-357-0359 or 202-357-0360. When connected, press Enter. At the login prompt, enter public.

### Getting Started with Direct E-Mail

Send an E-mail message to stisserv@nsf.gov (Internet) or stisserv@NSF (BITNET). The Subject field will be ignored. Put the following in the message text:

Request: stis
Topic: stisdim

You will receive instructions for this service.

#### For More Information

For additional assistance contact:

E-mail: stis-request@nsf.gov (Internet)

stis-reg@NSF (BITNET)

Phone: 202-357-7555 (voice mail)

FAX: 202-357-7663 TDD: 202-357-7492
