Preface *page* xi
Index of Notation xiii

PART I: A Spectral Theory of Matrix Polynomials *page* 1
1 Matrix polynomials 3
1.1 Smith canonical form 4
1.2 Eigenvectors and Jordan chains 8
1.3 Partial spectral pairs 12
1.4 Canonical set of Jordan chains 16

2 Spectral triples for matrix polynomials 23
2.1 Spectral triples 24
2.2 Properties of spectral triples and the Calderón projector 28
2.3 Left Jordan chains and a representation for the resolvent $L^{-1}(\lambda)$ 35
2.4 Transformations of matrix polynomials 39

3 Monic matrix polynomials 43
3.1 Standard pairs and triples 43
3.2 Linearization 47
3.3 Representation of a monic matrix polynomial in terms of a standard pair 51
3.4 Euclidean algorithm in terms of a standard pair 52
3.5 Monic divisors 57
3.6 Monic spectral divisors 58
3.7 Second degree matrix polynomials and examples 61
3.8 Changing from complex to real matrix coefficients 64

4 Further results 72
4.1 The inhomogeneous equation $L(d/dt)u = f$ 73
4.2 Infinite spectral triples 75
4.3 More on restrictions of spectral pairs 83
4.4 Spectral triples of products 84
4.5 Transformations of products 91

PART II: Manifolds and Vector Bundles **99**
5 Manifolds and vector bundles 101
5.1 Background and notation 101
5.2 Manifolds 113
5.3 The tangent bundle 119
5.4 Submanifolds 124
5.5 Vector fields 130
5.6 Partitions of unity 138
5.7 Vector bundles 142
5.8 Operations on vector bundles 152
5.9 Homotopy property for vector bundles 161
5.10 Riemannian and Hermitian metrics 164
5.11 Manifolds with boundary 168
5.12 Tubular neighbourhoods and collars 172

6 Differential forms 180
6.1 Differential forms 180
6.2 The exterior derivative d 182
6.3 The Poincaré lemma 189
6.4 Orientation of a vector bundle 192
6.5 Orientation of a manifold 197
6.6 Integration on manifolds 201
6.7 Stokes' theorem 206
6.8 Differential operators in vector bundles 209
6.9 The Hodge star operator and the Laplace–de Rham operator 217

PART III: Pseudo-Differential Operators and Elliptic Boundary Value Problems **231**
7 Pseudo-differential operators on $\mathbb{R}^n$ 233
7.1 Some remarks about generalizing integrals 233
7.2 The classes S^m 236
7.3 Pseudo-differential operator algebra and asymptotics 243
7.4 Transformations of p.d.o.'s under a diffeomorphism 252
7.5 Classical symbols 256
7.6 Continuity in Sobolev spaces 260
7.7 Elliptic operators on $\mathbb{R}^n$ 268
7.8 Gårding's inequality and some results on the relation between the operator norm of a p.d.o. and the norm of its symbol 271
Appendix: summary of definitions and theorems for Sobolev spaces 278

8 Pseudo-differential operators on a compact manifold 287
8.1 Background and notation 288
8.2 Pseudo-differential operators on M 293
8.3 Main symbols and p.d.o. algebra 298
8.4 Classic operators on M 307
8.5 Definitions for operators in vector bundles 309
8.6 Pseudo-differential operators in vector bundles 313
8.7 Elliptic operators 324
8.8 An illustration: the Hodge decomposition theorem 335
8.9 Limits of pseudo-differential operators 338
8.10 The index of elliptic symbols 344

9 Elliptic systems on bounded domains in $\mathbb{R}^n$ 365
9.1 Fredholm operators and some functional analysis 365
9.2 Elliptic systems of Douglis-Nirenberg type 376
9.3 Boundary operators and the L-condition 387
9.4 The main theorem for elliptic boundary value problems 393

PART IV: Reduction of a Boundary Value Problem to an Elliptic System on the Boundary 413
10 Understanding the L-condition 415
10.1 Alternative versions of the L-condition 416
10.2 The Dirichlet problem 423
10.3 Matrix polynomials depending on parameters 427
10.4 Homogeneity properties of spectral triples 431
10.5 The classes $\mathrm{Ell}^{\mathbf{s},\mathbf{t}}$ and $\mathrm{BE}^{\mathbf{s},\mathbf{t},\mathbf{m}}$: two theorems of Agranovič and Dynin 439
10.6 Homotopies of elliptic boundary problems 443
10.7 The classes $\mathfrak{E}^l$ and $\mathfrak{BE}^{l,\mathbf{m}}$ 447
10.8 Comparing the index of two problems having the same boundary operator 453
10.9 Composition of boundary problems 457

11 Applications to the index 465
11.1 First-order elliptic systems 466
11.2 Higher-order elliptic systems 475

12 BVP's for ordinary differential operators and the connection with spectral triples 487
12.1 Extension of C^∞ functions defined on a half-line 488
12.2 Ordinary differential operators on a half-line 491

13 Behaviour of a pseudo-differential operator near a boundary 502
13.1 C^∞ functions defined on a half-space 502
13.2 The transmission property 510
13.3 Boundary values of a single-layer potential 517

14 The main theorem revisited 525
14.1 Some spaces of distributions on $\mathbb{R}^n_+$ 530
14.2 The spaces $H^{s,t}$ 539
14.3 The Calderón operator for an elliptic operator 544
14.4 Parametrix for an elliptic boundary problem 549
14.5 An application to the index 557
14.6 The main theorem for operators in $\mathfrak{BE}^{l,\mathbf{m}}$, and the classes $S^{m,m'}$ 562

PART V: An Index Formula for Elliptic Boundary Problems in the Plane 577
15 Further results on the Lopatinskii condition 579
15.1 Some preliminaries 579
15.2 The degree or winding number on the unit circle 582
15.3 The topological index 585
15.4 Changing from complex to real matrix coefficients 591

16 The index in the plane 595
16.1 A simple form for first-order elliptic systems with real coefficients 596
16.2 The index formula for first-order elliptic systems with real coefficients 600
16.3 A fundamental solution for first-order elliptic systems with constant real coefficients 602
16.4 Index formulas for higher-order systems with real coefficients 605
16.5 The index formula for elliptic systems with complex coefficients and when the boundary operator is pseudo-differential 615

17 Elliptic systems with 2 × 2 real coefficients 623
17.1 Homotopy classification 623
17.2 An example: the Neumann BVP for second-order elliptic operators 627
17.3 An example: the elliptic system for plane elastic deformations 630
