Contents

Preface ix
Acknowledgments xiii

Basic notation xv

1. HARDY–TYPE OPERATORS 1
   1.1 Boundedness and compactness in BFS 1
   1.2 An extension of the Hardy transform 25
   1.3 Estimates for approximation numbers 44
   1.4 Norms of positive operators 57
   1.5 Notes and comments on Chapter 1 75

2. FRACTIONAL INTEGRALS ON THE LINE 77
   2.1 Fractional integrals 77
   2.2 Two–weight problems 102
   2.3 Trace inequalities ("Diagonal case"). Examples 107
   2.4 Weak–type inequalities. Examples 135
   2.5 Integral transforms with power– logarithmic kernels 141
   2.6 Erdelyi–Köber operators 154
   2.7 Integral transforms with positive kernels 160
   2.8 Extended Erdelyi–Köber operators 185
   2.9 Generalized one–sided potentials 198
   2.10 One-sided potentials on the half–space 218
   2.11 Weighted criteria in Lorentz spaces 230
   2.12 Applications to Abel's integral equations 241
   2.13 On some Volterra–type integral equations 244
   2.14 Application to the existence of positive solutions of nonlinear integral equations 246
   2.15 Notes and comments on Chapter 2 248

3. ONE–SIDED MAXIMAL FUNCTIONS 251
3.1 One–sided maximal functions 251
3.2 Mapping properties of potentials on the line 256
3.3 Potentials T_γ on the line (the case $0 < \gamma < \frac{1}{p}$) 267
3.4 Weak–type inequalities 275
3.5 Potentials on bounded intervals 279
3.6 Two-weight criteria for fractional maximal functions 281
3.7 Generalized one–sided maximal functions 283
3.8 Potentials with power–logarithmic kernels 288
3.9 Multiple potentials 296
3.10 One–sided Hörmander–type maximal functions 310
3.11 Notes and comments on Chapter 3 315

4. BALL FRACTIONAL INTEGRALS 317
4.1 Boundedness criteria 317
4.2 Compactness criteria 328
4.3 The measure of non–compactness 334
4.4 Mapping properties in Lorentz spaces 338
4.5 Notes and comments on Chapter 4 341

5. POTENTIALS ON R^N 343
5.1 Truncated potentials 343
5.2 Two-weight compactness conditions for Riesz potentials 359
5.3 Integral transforms with radial kernels 362
5.4 Notes and comments on Chapter 5 365

6. FRACTIONAL INTEGRALS ON MEASURE SPACES 367
6.1 Integral transforms on nonhomogeneous spaces 367
6.2 Theorems of Adams type 376
6.3 Truncated potentials on SHT 380
6.4 Riesz potentials in the half–space 389
6.5 Truncated potentials in the half–space 397
6.6 Two–weight (p, p) type inequalities 412
6.7 Theorems of Koosis type 428
6.8 Fractional maximal functions on SHT 437
6.9 Weighted estimates in Lorentz spaces 441
6.10 Notes and comments on Chapter 6 446

7. SINGULAR NUMBERS 447
7.1 Volterra integral operators 447
7.2 Riemann–Liouville–type operators 461

7.3 Potential–type operators 476
7.4 Hardy–type operators 482
7.5 Asymptotic behaviour of singular and entropy numbers 488
7.6 Notes and comments on Chapter 7 498

8. SINGULAR INTEGRALS 501
8.1 Two–weight strong–type estimates 502
8.2 Weak–type estimates 522
8.3 Singular integrals on nonhomogeneous spaces 541
8.4 Two–weight inequalities for the Hilbert transform 552
8.5 Estimates in Lorentz spaces 557
8.6 Cauchy–Szegö projection 578
8.7 Singular integrals via Clifford analysis 584
8.8 Theorems of Koosis type 587
8.9 Notes and comments on Chapter 8 592

9. MULTIPLIERS OF FOURIER TRANSFORMS 593
9.1 Weighted Triebel–Lizorkin spaces 593
9.2 Two–weight multipliers in Triebel–Lizorkin spaces 598
9.3 $\left(F^{q,\theta}_{\beta,w}, F^{p,\theta}_{\beta,v}\right)$ multipliers. The case $1 < q \le p < \infty$ 609
9.4 Multipliers in weighted spaces with mixed norms 610
9.5 Examples 613
9.6 Notes and comments on Chapter 9 615

10. PROBLEMS 617
