Volume 180

Calculus of Variations and Optimal Control

A. A. Milyutin N. P. Osmolovskii

American Mathematical Society Providence, Rhode Island

Contents

Preface	xi
Introduction	1
Part 1. First Order Conditions	5
 Chapter 1. Theory of a Weak Minimum for the Problem on a Fixed Time Interval 1. Problems of the calculus of variations 2. The problem on a fixed time interval. Necessary conditions for a weak extremum 3. Two examples 4. Weak extremals 	7 7 8 14 18
 Chapter 2. Theory of the Maximum Principle 5. Formulation of the maximum principle for the problem of §1 6. Invariance of Pontryagin's convergence under the change of the independent variable 7. Proof of the maximum principle 8. Expansion formulas 	23 23 26 32 40
 Chapter 3. Extremals and the Hamiltonian of a Control System 9. Extremals 10. Solutions of a Hamiltonian system and extremals 11. Examples 11.1. Time-optimal control problems 11.2. Two optimal control problems on a fixed time interval 11.3. Isoperimetric problem 11.4. Singular extremals 12. Convexification of the right-hand side of a control system (sliding modes) 	$\begin{array}{c} 43 \\ 43 \\ 47 \\ 51 \\ 55 \\ 63 \\ 66 \\ 69 \end{array}$
 Chapter 4. Hamilton-Jacobi Equation and Field Theory 13. The Hamilton-Jacobi equation and sufficient conditions for a strong minimum 14. Solutions of the Hamilton-Jacobi equation and extremals 15. The field of extremals 15.1. The general field theory 15.2. A linear control system 	87 92 105 105 112

CO	NΊ	EN	TS
----	----	----	----

15.3. The field in the problem with a general control system and a	
primitive endpoint part	116
15.4. Isoperimetric problem	121
Chapter 5. Transformations of Problems and Invariance of Extremals	125
16. Invariance of extremals	125
16.1. Change of variables	125
16.2. Change of the independent variable	134
16.3. Passage to a parametric form	140
 Calculus of variations problems with pointwise equality constraints Problems with pointwise mixed state-control equality and inequal- 	140
ity constraints	148
Part 2. Quadratic Conditions	153
Chapter 1. Quadratic Conditions and Conjugate Points for Broken Ex- tremals	155
1. Quadratic conditions in the simplest problem of the calculus of	100
variations	155
1.1. The setup and assumptions	155
1.2. Minimum on a set of sequences	157
1.3. First order conditions	158
1.4. An additional condition of the Weierstrass–Erdmann type	160
1.5. The Legendre condition	162
1.6. Quadratic conditions for a weak minimum	162
1.7. Quadratic conditions for a Pontryagin minimum	163
1.8. Sufficient conditions for a bounded-strong minimum	166
1.9. θ -weak minimum	167
2. Conjugate points and conditions for positive definiteness of the	
quadratic form	168
2.1. Passage of the quadratic form through zero: the classical Ja- cobi condition	168
2.2. Positive definiteness of Ω on G_2	177
3. Conditions for nonnegativeness of the quadratic form	186
3.1. Nonnegativeness of ω on E_2	186
3.2. Nonnegativeness of Ω on G_2	187
3.3. Abstract model	189
3.4. Nonnegativeness of Ω on G_2 (continued)	190
4. Investigation of a broken extremal by means of conjugate points	
theory: an example	196
Chapter 2. Quadratic Conditions for a Pontryagin Minimum and Sufficient	
Conditions for a Strong Minimum: Proofs	211
5. Higher orders, γ -conditions, and constant C_{γ}	211
5.1. Order γ	211
5.2. γ -conditions	214
5.3. Constant C_{γ}	215
6. Expansion of the integral functional on local sequences of variations	217
6.1. The structure of local sequences. The main lemma	217
6.2. Representation for the increment δF on local sequences	222

6.3. Proof of Lemma 6.1, continued2236.4. Proof of Lemma 6.1, concluded2256.5. Proof of Theorem 1.12286.6. Estimation of $ \delta x _C$ on local sequences2297.1. The constant C_{γ}^{loc} 2297.2. Extension of the set $\Pi^{loc}(E)$ 2307.3. Canonical representation for sequences in $\Pi_{O(\gamma)}^{loc}$ 2337.4. Passage to sequences with $\delta v = 0$ 2347.5. Passage to sequences with discontinuous state components2357.6. The set of sequences S^3 2417.7. The sets of sequences S^4 and S^5 2417.8. The space $Z(\theta)$ and subspace G 2437.9. Passage to G_2 2447.10. The CT-strict maximum principle2458. Lower bound for C_{γ} 2498.1. Extension of the set $\Pi(E)$ 2498.2. Passage to local sequences with discontinuous state components2608.4. Application of the Legendre condition2588.5. Passage to sequences with discontinuous state components2608.6. Condition $D^k(H) \ge 2C_{\Gamma}(H)$ 2618.7. Passage to the equality in the differential constraint2658.8. The final lower bound for C_{γ} . The result of deciphering2668.9. Proof of Theorem 5.12679. Sufficient conditions for a bounded-strong minimum in the simplest problem of the calculus of variations2719.1. Sufficient conditions for a strong minimum2759.3. Sufficient conditions for a strong minimum2759.3. Sufficient conditions for a strong minimum2759.4. Quadra
6.5. Proof of Theorem 1.12286.6. Estimation of $\ \delta x\ _C$ on local sequences2287. Upper bound for C_{γ} 2297.1. The constant C_{γ}^{loc} 2297.2. Extension of the set $\Pi^{loc}(E)$ 2307.3. Canonical representation for sequences in $\Pi_{O(\gamma)}^{loc}$ 2337.4. Passage to sequences with $\delta v = 0$ 2347.5. Passage to sequences with discontinuous state components2357.6. The set of sequences S^4 and S^5 2417.7. The sets of sequences S^4 and S^5 2417.8. The space $Z(\theta)$ and subspace G 2437.9. Passage to G_2 2447.10. The $C\Gamma$ -strict maximum principle2458. Lower bound for C_{γ} 2498.1. Extension of the set $\Pi(E)$ 2498.2. Passage to local sequences2498.3. Simplifications in the definition of $C_{\gamma}(\Phi, \Pi_{O(\sqrt{\gamma})}^{loc})$ 2568.4. Application of the Legendre condition2588.5. Passage to sequences with discontinuous state components2608.6. Condition $D^k(H) \ge 2C_{\Gamma}(H)$ 2618.7. Passage to the equality in the differential constraint2658.8. The final lower bound for C_{γ} . The result of deciphering2668.9. Proof of Theorem 5.12679.1. Sufficient conditions for a bounded-strong minimum in the simplest problem of the calculus of variations2719.1. Sufficient conditions for a strong minimum2759.3. Sufficient conditions for a strong minimum2759.3. Sufficient conditions for a strong minimum2759.3. Suff
6.6. Estimation of $\ \delta x\ _C$ on local sequences2287. Upper bound for C_{γ} 2297.1. The constant C_{γ}^{loc} 2297.2. Extension of the set $\Pi^{loc}(E)$ 2307.3. Canonical representation for sequences in $\Pi_{O(\gamma)}^{loc}$ 2337.4. Passage to sequences with $\delta v = 0$ 2347.5. Passage to sequences with discontinuous state components2357.6. The set of sequences S^4 and S^5 2417.7. The sets of sequences S^4 and S^5 2417.8. The space $Z(\theta)$ and subspace G 2437.9. Passage to G_2 2447.10. The $C\Gamma$ -strict maximum principle2458. Lower bound for C_{γ} 2498.1. Extension of the set $\Pi(E)$ 2498.2. Passage to local sequences2498.3. Simplifications in the definition of $C_{\gamma}(\Phi, \Pi_{o(\sqrt{\gamma})}^{loc})$ 2568.4. Application of the Legendre condition2588.5. Passage to sequences with discontinuous state components2608.6. Condition $D^k(H) \ge 2C_{\Gamma}(H)$ 2618.7. Passage to the equality in the differential constraint2658.8. The final lower bound for C_{γ} . The result of deciphering2668.9. Proof of Theorem 5.12679. Sufficient conditions for bounded-strong minimum. Proof of Theorem 1.52719.1. Sufficient conditions for a strong minimum2759.3. Sufficient conditions in the General Problem of the calculus of Variations28310. Formulation of quadratic conditions in the general problem of the calculus of Variations283 <trd>10.1. The problem setting a</trd>
7. Upper bound for C_{γ} 2297.1. The constant $C_{\gamma}^{1/c}$ 2297.2. Extension of the set $\Pi^{loc}(E)$ 2307.3. Canonical representation for sequences in $\Pi_{O(\gamma)}^{loc}$ 2337.4. Passage to sequences with $\delta v = 0$ 2347.5. Passage to sequences with discontinuous state components2357.6. The set of sequences S^3 and S^5 2417.7. The sets of sequences S^4 and S^5 2417.8. The space $Z(\theta)$ and subspace G 2437.9. Passage to G_2 2447.10. The CT-strict maximum principle2458. Lower bound for C_{γ} 2498.1. Extension of the set $\Pi(E)$ 2498.2. Passage to local sequences2498.3. Simplifications in the definition of $C_{\gamma}(\Phi, \prod_{o(\sqrt{\gamma})}^{loc})$ 2568.4. Application of the Legendre condition2588.5. Passage to sequences with discontinuous state components2608.6. Condition $D^k(H) \ge 2C_{\Gamma}(H)$ 2618.7. Passage to the equality in the differential constraint2658.8. The final lower bound for C_{γ} . The result of deciphering2668.9. Proof of Theorem 5.12679. Sufficient conditions for bounded-strong minimum. Proof of Theorem 1.52719.1. Sufficient conditions for a strong minimum2759.3. Sufficient conditions in the General Problem of the Calculus of Variations and Related Optimal Control Problems28310. Fromulation of quadratic conditions in the general problem of the calculus of Variations and Related Optimal Control Problems28310. Formulation of quadratic
7.1. The constant $C_{\gamma^{c}}^{\uparrow \alpha}$ 2297.2. Extension of the set $\Pi^{\text{loc}}(E)$ 2307.3. Canonical representation for sequences in $\Pi_{O(\gamma)}^{\text{loc}}$ 2337.4. Passage to sequences with $\delta v = 0$ 2347.5. Passage to sequences with discontinuous state components2357.6. The set of sequences S^3 2417.7. The sets of sequences S^4 and S^5 2417.8. The space $Z(\theta)$ and subspace G 2437.9. Passage to G_2 2447.10. The CT-strict maximum principle2458. Lower bound for C_{γ} 2498.1. Extension of the set $\Pi(E)$ 2498.2. Passage to local sequences2498.3. Simplifications in the definition of $C_{\gamma}(\Phi, \prod_{\langle \sqrt{\gamma} \rangle}^{\text{loc}})$ 2568.4. Application of the Legendre condition2588.5. Passage to sequences with discontinuous state components2608.6. Condition $D^k(H) \ge 2C_{\Gamma}(H)$ 2618.7. Passage to the equality in the differential constraint2668.8. The final lower bound for C_{γ} . The result of deciphering2668.9. Proof of Theorem 5.12679. Sufficient conditions for a bounded-strong minimum in the simplest problem of the calculus of variations2719.1. Sufficient conditions for a strong minimum2759.3.
