Contents

Chapter 1: Foundations of Magnetic Resonance	1
1. Historical development	1
2. Quantization of angular momentum	2
3. Relationship between angular momentum and magnetic moment	3
4. Energy of a nuclear spin in a magnetic field	5
5. The Larmor frequency	6
6. The nuclear resonance experiment	8
7. Energy level populations and nuclear spin relaxation	10
8. The Bloch equations	12
Chapter 2: Experimental Techniques of ^{13}C NMR Spectroscopy	15
1. Construction of the spectrometer	15
1.1 The magnet and its stabilization	15
1.1.1 Electromagnet	15
1.1.2 Superconducting magnet	17
1.2 The spectrometer	18
1.2.1 The observing channel	19
1.2.2 The locking channel	20
1.2.3 The decoupling channel	21
1.3 The probe	22
1.4 Data processing in the FT NMR spectrometer	22
1.4.1 Analogue-digital converter	22
1.4.2 Quadrature phase-sensitive detection	25
1.4.3 Computer	27
1.4.4 Digital-analogue converter	29
2. Fourier transform methods	29
2.1 Fellgett's principle	30
2.2 Fourier analysis	32
2.3 Fourier transformation	35
2.4 Digital Fourier transformation	38
2.5 Digital filtering	39
2.5.1 Exponential multiplication	40
2.5.2 Convolution difference method	43
2.5.3 Gaussian multiplication	43
2.5.4 Apodization	43
2.6 Phase correction	43

2.7	Optimum pulse angle	45
2.8	Maximum entropy method	46
3.	Double resonance methods in ^{13}C NMR spectroscopy	47
3.1	Basis of decoupling	47
3.2	^1H broad-band decoupling	47
3.2.1	Gated decoupling	49
3.2.2	Inverse gated decoupling	49
3.3	^1H off-resonance decoupling	51
3.3.1	^1H noise off-resonance decoupling (NORD)	55
3.4	^1H selective decoupling	57
3.5	Selective population transfer (SPT)	59
3.6	Triple resonance and homonuclear decoupling	61
4.	New irradiation procedures	61
4.1	Selective excitation	61
4.2	Two-dimensional ^{13}C NMR spectroscopy	62
4.2.1	2D J -resolved ^{13}C NMR spectroscopy	64
4.2.2	^{13}C - ^1H correlation spectroscopy (H,C-COSY)	66
4.2.3	Relayed H,C-COSY	68
4.3	Methods for determining multiplicity: spin-echo, INEPT and DEPT techniques	70
4.4	Measurement of ^{13}C - ^{13}C spin-spin coupling constants (INADEQUATE)	76
4.5	^{13}C NMR spectroscopy of solids	79
5.	Practical aspects of ^{13}C NMR measurements	81
5.1	Sample preparation	81
5.2	Standardization	85
5.3	Solvents	85
Chapter 3: The Chemical Shift		92
1.	Origins of the chemical shift	92
2.	Calculation of the chemical shift	99
3.	Empirical correlations and calculations	104
4.	Chemical shifts of particular classes of substances	113
4.1	Alkanes	113
4.1.1	Cycloalkanes	118
4.1.2	Polycycloalkanes	123
4.2	Alkenes	131
4.2.1	Linear and branched alkenes	132
4.2.2	Cycloalkenes	139
4.3	Alkynes and allenes	147
4.4	Aromatic hydrocarbons	152
4.5	Substituted alkanes	168
4.5.1	Haloalkanes	168

4.5.2	Aliphatic oxygen and sulphur compounds	174
4.5.3	Aliphatic nitrogen and phosphorus compounds	219
4.5.4	Organometallic compounds	250
4.6	Substituted cycloalkanes and bicycloalkanes	258
4.7	Substituted alkenes and cycloalkenes	290
4.8	Substituted alkynes and allenes	301
4.9	Annulenones and quinones	306
4.10	Substituted aromatic compounds	311
4.10.1	Benzene derivatives	311
4.10.2	Substituted naphthalenes	340
4.11	Heterocyclics	346
4.11.1	Saturated heterocyclics	346
4.11.2	Unsaturated heterocyclics	368
4.11.3	Heteroaromatics	383
4.12	Ionic compounds	409
4.12.1	Carbocations	409
4.12.2	Carbanions	415
4.13	Organic transition metal compounds	420
4.14	Natural products	425
4.15	Polymers	449
Chapter 4: ^{13}C-X Spin-Spin Couplings		468
1.	Fundamentals	468
2.	^{13}C - ^1H couplings	473
2.1	Determination of ^{13}C - ^1H coupling constants	473
2.1.1	Evaluation from ^1H NMR spectra	473
2.1.2	Evaluation from first order ^{13}C NMR spectra	475
2.1.3	Complete analysis of higher order ^{13}C NMR spectra	480
2.1.4	Methods for simplifying spectra	486
2.1.5	Signs and assignment of ^{13}C - ^1H couplings	491
2.2	Structural dependence of ^{13}C - ^1H couplings	495
2.2.1	^{13}C - ^1H couplings across one bond	495
2.2.2	Geminal ^{13}C - ^1H couplings	512
2.2.3	Vicinal ^{13}C - ^1H couplings	526
2.2.4	Long-range ^{13}C - ^1H couplings	543
2.2.5	Solvent effects on $^nJ(\text{C},\text{H})$	544
3.	^{13}C - ^{13}C couplings	546
3.1	Structural dependence of ^{13}C - ^{13}C couplings	549
3.1.1	^{13}C - ^{13}C couplings across one bond	549
3.1.2	Geminal ^{13}C - ^{13}C couplings	557
3.1.3	Vicinal ^{13}C - ^{13}C couplings	561
3.1.4	Long-range ^{13}C - ^{13}C couplings	567

4.	^{13}C - ^{15}N couplings	568
4.1	Structural dependence of ^{13}C - ^{15}N couplings	568
4.1.1	^{13}C - ^{15}N couplings across one bond	568
4.1.2	Geminal ^{13}C - ^{15}N couplings	572
4.1.3	Vicinal ^{13}C - ^{15}N couplings	574
5.	^{13}C - ^{19}F couplings	576
5.1	Structural dependence of ^{13}C - ^{19}F couplings	576
5.1.1	^{13}C - ^{19}F couplings across one bond	577
5.1.2	Geminal ^{13}C - ^{19}F couplings	580
5.1.3	Vicinal ^{13}C - ^{19}F couplings	582
5.1.4	Long-range ^{13}C - ^{19}F couplings	585
6.	^{13}C - ^{31}P couplings	586
6.1	Structural dependence of ^{13}C - ^{31}P couplings	586
6.1.1	^{13}C - ^{31}P couplings across one bond	586
6.1.2	Geminal ^{13}C - ^{31}P couplings	590
6.1.3	Vicinal ^{13}C - ^{31}P couplings	592
6.1.4	Long-range ^{13}C - ^{31}P couplings	593
7.	Couplings between ^{13}C and other Main Group elements	594
7.1	^{13}C - ^6Li couplings	595
7.2	^{13}C - ^{11}B and ^{13}C - ^{205}Tl couplings	598
7.3	^{13}C - ^{29}Si , ^{13}C - ^{73}Ge , ^{13}C - ^{119}Sn and ^{13}C - ^{207}Pb couplings	600
7.4	^{13}C - ^{77}Se and ^{13}C - ^{125}Te couplings	604
8.	Couplings between ^{13}C and transition metals with $I=1/2$	607

Chapter 5: ^{13}C Spin-Lattice Relaxation and the Nuclear Overhauser Effect

1.	Fundamentals	621
1.1	Dipolar relaxation $T_{1\text{-DD}}$	621
1.1.1	Autocorrelation function and spectral density	622
1.1.2	Relationship between quantum-mechanical transition probability and molecular motion	624
1.2	The nuclear Overhauser effect	626
1.2.1	Spin dynamics in the CH system	626
1.2.2	Definition of the NOE effect	629
1.2.3	Qualitative estimation of the dipolar relaxation time	631
1.3	Other relaxation mechanisms	632
1.3.1	Spin-rotation relaxation	632
1.3.2	Relaxation by shielding anisotropy	632
1.3.3	Relaxation by scalar coupling	633
1.3.4	Relaxation by paramagnetic species	635
1.3.5	Differentiating between the relaxation mechanisms	636
2.	Measurement of spin-lattice relaxation times	636

3. Applications of spin–lattice relaxation times	639
3.1 T_1 values as criteria for assignments in ^{13}C spectroscopy	639
3.2 Spin–lattice relaxation and molecular motion	640
3.3 Anisotropy of the molecular mobility	641
3.4 Segmental mobility and methyl group rotation	642
3.5 Relaxation time measurements on long-chain compounds, polymers and biopolymers	644

Chapter 6: Dynamic ^{13}C NMR Spectroscopy 650

1. The NMR time scale	650
2. Theoretical basis	651
2.1 Experimental characteristics of ^{13}C NMR spectroscopy	652
2.2 Line shape analysis	652
3. Applications of dynamic ^{13}C NMR spectroscopy	654
3.1 Valence isomerism	655
3.2 Ring inversion	656
3.3 Metal carbonyls	659
3.4 Hindered rotation	661
3.4.1 Rotation about the $\text{C}(\text{sp}^3)\text{—C}(\text{sp}^3)$ single bond	663
3.4.2 Rotation about the $\text{C}(\text{sp}^3)\text{—C}(\text{sp}^2)$ single bond	663
3.4.3 Rotation about the $\text{C}(\text{sp}^2)\text{—C}(\text{sp}^2)$ single bond	667
3.4.4 Rotation about carbon–heteroatom bonds	668
4. Isotope effects on equilibria	668

Chapter 7: Use of Lanthanide Shift Reagents in ^{13}C NMR Spectroscopy 672

1. Introduction	672
2. Theoretical basis	672
3. Choice of the LSR	674
4. Methods of calculation	674
5. Computer program for evaluating the McConnell expression	676
6. Applications in ^{13}C NMR spectroscopy	676
6.1 Assigning resonances with the aid of an LSR	676
6.2 LSR data in structural investigations	678
6.3 Conformational analysis using LSR data	679

Chapter 8: ^{13}C NMR Spectroscopy in the Study of Reaction Mechanisms 681

1. Introduction	681
2. Evidence for reaction intermediates	682
3. ^{13}C -CIDNP	683
4. ^{13}C investigations in biosynthesis	687

Appendix A: Answers to the Problems	692
Appendix B: Selected Reading on NMR Spectroscopy	721
Appendix C: Information Systems for ^{13}C NMR Spectroscopy	725
Appendix D: List of Abbreviations and Acronyms	728
Index of Compounds	731
Subject Index	765
