Contents

Preface vii

Contributors ix

- 1. Concepts and Models for Characterizing Homogeneous Reactions Catalyzed by Transition Metal Cluster Complexes 1**
E. Rosenberg and R. Laine
- 2. Activation of Ruthenium Clusters for Use in Catalysis: Approaches and Problems 39**
G. Lavigne and Bénédicte de Bonneval
- 3. Catalysis by Mixed-Metal Clusters Containing Gold Phosphine Groupings 95**
L. Pignolet
- 4. Catalysis by Sulfido Bridged Dimolybdenum Complexes 127**
M. Rakowski DuBois
- 5. Catalytic Applications of Dimolybdenum and Ditungsten Complexes Containing Multiple Metal–Metal Bond 145**
M. McCann

6. Synthesis of Organic Compounds Catalyzed by Transition Metal Clusters 167
G. Süss-Fink and M. Jahncke
 7. Catalysis with Dirhodium(II) Complexes 249
M. Doyle
 8. Catalytic Macrocyclization of Thietanes by Metal Carbonyl Cluster Complexes 283
R. D. Adams
 9. Catalysis of Rh, Rh-Co, and Ir-Co Multinuclear Complexes and Its Applications to Organic Syntheses 307
I. Ojima and Z. Li
 10. Bimetallic Homogeneous Hydroformylation 345
G. Stanley
 11. Catalysis by Colloids 373
L. Lewis
 12. Catalysis with Palladium Clusters 395
I. Moiseev and M. N. Vargaftik
 13. Heterometallic Clusters for Heterogeneous Catalysis 443
P. Braunstein and J. Rosé
 14. Metal Cluster Catalysts Dispersed on Solid Supports 509
B. Gates
