Contents

<i>Preface</i>	<i>page</i> ix
<i>Acknowledgements</i>	xvii
1 Fourier series: convergence and summability	1
1.1 The basics: partial sums and the Dirichlet kernel	1
1.2 Approximate identities, Fejér kernel	8
1.3 The L^p convergence of partial sums	12
1.4 Regularity and Fourier series	15
1.5 Higher dimensions	22
1.6 Interpolation of operators	23
Notes	24
Problems	25
2 Harmonic functions; Poisson kernel	28
2.1 Harmonic functions	28
2.2 The Poisson kernel	30
2.3 The Hardy–Littlewood maximal function	36
2.4 Almost everywhere convergence	38
2.5 Weighted estimates for maximal functions	41
Notes	49
Problems	49
3 Conjugate harmonic functions; Hilbert transform	52
3.1 Hardy spaces of analytic functions	52
3.2 Riesz theorems	56
3.3 Definition and simple properties of the conjugate function	59
3.4 The weak- L^1 bound on the maximal function	60

3.5	The Hilbert transform	62
3.6	Convergence of Fourier series in L^p	67
	Notes	69
	Problems	69
4	The Fourier transform on \mathbb{R}^d and on LCA groups	73
4.1	The Euclidean Fourier transform	73
4.2	Method of stationary or nonstationary phases	84
4.3	The Fourier transform on locally compact Abelian groups	90
	Notes	103
	Problems	104
5	Introduction to probability theory	106
5.1	Probability spaces; independence	106
5.2	Sums of independent variables	108
5.3	Conditional expectations; martingales	122
	Notes	133
	Problems	134
6	Fourier series and randomness	136
6.1	Fourier series on $L^1(\mathbb{T})$: pointwise questions	136
6.2	Random Fourier series: the basics	145
6.3	Sidon sets	151
	Notes	162
	Problems	163
7	Calderón–Zygmund theory of singular integrals	166
7.1	Calderón–Zygmund kernels	166
7.2	The Laplacian: Riesz transforms and fractional integration	174
7.3	Almost everywhere convergence; homogeneous kernels	177
7.4	Bounded mean oscillation space	181
7.5	Singular integrals and A_p weights	188
7.6	A glimpse of H^1 –BMO duality and further remarks	192
	Notes	193
	Problems	193
8	Littlewood–Paley theory	196
8.1	The Mikhlin multiplier theorem	196
8.2	Littlewood–Paley square-function estimate	199

8.3	Calderón–Zygmund decomposition, Hölder spaces, and Schauder estimates	205
8.4	The Haar functions; dyadic harmonic analysis	211
8.5	Oscillatory multipliers	228
	Notes	230
	Problems	231
9	Almost orthogonality	235
9.1	Cotlar’s lemma	235
9.2	Calderón–Vaillancourt theorem	240
9.3	Hardy’s inequality	242
9.4	The $T(1)$ theorem via Haar functions	247
9.5	Carleson measures, BMO, and $T(1)$	259
	Notes	264
	Problems	265
10	The uncertainty principle	268
10.1	Bernstein’s bound and Heisenberg’s uncertainty principle	268
10.2	The Amrein–Berthier theorem	272
10.3	The Logvinenko–Sereda theorem	274
10.4	Solvability of constant-coefficient linear PDEs	281
	Notes	284
	Problems	285
11	Fourier restriction and applications	287
11.1	The Tomas–Stein theorem	287
11.2	The endpoint	295
11.3	Restriction and PDE; Strichartz estimates	301
11.4	Optimal two-dimensional restriction	310
	Notes	311
	Problems	312
12	Introduction to the Weyl calculus	315
12.1	Motivation, definitions, basic properties	315
12.2	Adjoints and compositions	322
12.3	The L^2 theory	343
12.4	A phase-space transform	350
	Notes	357
	Problems	358
	<i>References</i>	360
	<i>Index</i>	367
